Model Year	Standard
1991 or later	40%
1990 or earlier	55%
      - ii. The engine model year is determined by the emission control label. If the emission control label is missing, illegible, or incorrect, the test standard shall be 40%, unless a correct, legible, emission control label replacement is attached to the vehicle within 30 days of the inspection.
    - c. Alternative Opacity Standard. The Director shall identify an alternative, less stringent opacity standard for an engine family if the conditions of either subsection (C)(10)(c)(i) or (C)(10)(c)(ii) are satisfied.
      - i. The engine family exhibits smoke opacity greater than the applicable standard in subsection (C)(10)(b)(i) when in good operating condition and adjusted to the manufacturer's specifications. If this condition is satisfied, the Director shall identify a technologically appropriate less stringent standard based on a review of data obtained from engines in good operating condition and adjusted to manufacturer's specifications.
      - ii. The engine family has been granted an exemption from a standard equivalent to the applicable standard in subsection (C)(10)(b)(i) based on the J1667 Recommended Practice by the executive officer of the California Air Resources Board (CARB). If this condition is satisfied, the Director shall allow the engine family to comply with any technologically

- appropriate less stringent standard identified by the executive officer of CARB.
- iii. A demonstration under subsection (C)(10)(c)(i) shall be based on data from at least three vehicles. Data from official inspections under this subsection (C)(10) showing that vehicles in the engine family meet the standard may be used to rebut the demonstration.
  - iv. The Director shall implement any new standard resulting from each exemption as soon as practicable for all subsequent tests and provide notice at all affected test stations and fleets.
11. Loaded Opacity A Test.
    - a. Test Procedure.
      - i. The vehicle shall be tested on a chassis dynamometer beginning with no power absorption by selecting a gear ratio that produces a maximum vehicle speed of 30-35 MPH at governed or maximum rated RPM.
      - ii. If the vehicle has a manual transmission or an automatic transmission with individual gear selection, the engine shall be operated at governed or maximum rated engine RPM, at normal operating temperature under a power absorption load applied to the dynamometer until the loading reduces the engine RPM to 80% of the governed speed at wide-open throttle position.
      - iii. If the vehicle has an automatic transmission and automatic gear kickdown, the engine shall be loaded to a speed just above the kickdown speed or 80% of the governed speed, whichever is greater.
      - iv. If the chassis dynamometer does not have enough horsepower absorption capability to lug the engine down to these speeds, the vehicle's brakes may be used to assist the dynamometer.
    - b. Test Failure. A vehicle fails the test if the opacity reading for a period of 10 consecutive seconds exceeds the applicable standard in R18-2-1030(B).
  12. Loaded Opacity B Test.
    - a. Test Procedure. The vehicle shall be tested by a loaded dynamometer test by applying a single load of 30 HP,  $\pm$  2 HP, while operated at 50 MPH.
    - b. Test Failure. A vehicle fails the test if the opacity reading for a period of 10 consecutive seconds exceeds the applicable standard in R18-2-1030(B).
  13. Loaded Opacity C Test.
    - a. Test Procedure. The vehicle shall be tested by a loaded dynamometer test by applying a single load of between 6.4 - 8.4 HP while operated at 30 MPH.
    - b. Test Failure. A vehicle fails the test if the opacity reading for a period of 10 consecutive seconds exceeds the applicable standard in R18-2-1030(B).
  14. Exhaust Sampling Requirements for Diesel Vehicles Tests other than the Snap Idle Test.
    - a. For a diesel-powered vehicle equipped with multiple exhaust pipes, separate measurements shall be made on each exhaust pipe. The reading taken from the exhaust pipe that has the highest opacity reading shall be used for comparison with the standard in R18-2-1030(B).
    - b. A vehicle shall be inspected with either a full-flow or sampling-type opacity meter. The opacity meter shall be a direct reading, continuous reading light extinction-type using a collimated light source and photo-electric cell, accurate to a value within  $\pm$  2% of full scale.
  15. Functional Gas Cap Test.

      - ii. Notwithstanding subsection 18-2-1006(C)(15)(d)(i), a vehicle does not fail the test if the failing cap is immediately replaced at the state station by a gas cap that satisfies the requirements of this subsection.
  16. Tampering Inspection.
    - a. The inspection shall be based on the original configuration of the vehicle as manufactured. The Department shall verify the applicable emissions system requirements shall be verified by the "Vehicle Emission Control Information" label. "Original configuration" for a foreign manufactured vehicle means the design and construction of a vehicle produced by the manufacturer for original entry and sale in the United States.
    - b. The Department's tampering inspection shall consist of the following:

      - iii. A visual inspection to determine the presence of an operational positive crankcase ventilation system or closed crankcase ventilation system, if applicable; and
      - iv. A visual inspection to determine the presence of an operational evaporative control system, if applicable.
  17. Visual Gas Cap Test. The visual gas cap test consists of the inspector's ocular verification that a gas cap is properly fitted to the vehicle.
  18. Testing Vehicles that Operate on More than One Fuel. A vehicle, other than a vehicle for which an OBD test is required, designed to operate on more than one fuel, shall be tested on the fuel in use when the vehicle is presented for inspection, except vehicles that operate on alternative fuel, as defined in A.R.S. § 1-215.
  19. Testing Vehicles that Operate on Alternative Fuels.
    - a. The inspector shall test vehicles that operate on an alternative fuel, as defined in A.R.S. § 1-215, other than a vehicle for which an OBD test is required, on each fuel that the vehicle is intended to operate on, using the appropriate emissions test procedure and standards for that vehicle.

**R18-2-1008. Procedure for Issuing Certificates of Waiver**

- A. Unless prohibited under subsection (D), a waiver inspector shall issue a certificate of waiver after reinspection at a state station to a vehicle that failed the emissions reinspection when the vehicle owner demonstrates any of the following conditions have been satisfied:
  - 1. The requirements of R18-2-1009 and R18-2-1010, to the extent applicable, have been satisfied;
  - 2. The vehicle owner has spent the maximum required repair cost on the maintenance and repair procedures required by R18-2-1010; or
  - 3. Any further repairs within the maximum required repair cost would not enable the vehicle to pass the required vehicle emissions inspection.
- B. The demonstration required by subsection (A) may consist of repair receipts, emissions test results, evidence of repairs performed, under hood verification, repair cost estimates, or similar evidence.
- C. A temporary certificate of waiver may be issued to a vehicle failing the tampering inspection if the vehicle owner provides to a waiver inspector a written statement from an automobile parts or repair business that an emission control device necessary to repair the tampering is not available and cannot be obtained from any usual source of supply, and if all requirements of R18-2-1008(A) have been met. All written statements are subject to verification for authenticity and accuracy by the waiver inspector. The Department may deny a temporary certificate of waiver if the state inspector has any reason to believe the written statement is false or a usual source of supply exists and the device necessary to repair the tampering is available. Certificates of waiver may be issued under this subsection for a specified period, not to exceed 90 days, that

A receipt or bill from a vehicle repair facility or automobile parts store shall be an acceptable proof of purchase. Before the end of the specified time period, the vehicle owner shall present to the waiver inspector proof of purchase and installation of the device. The Department shall track all issued temporary certificates of waiver and if no proof of purchase and installation is received before the end of the specified time period, the Department shall forward to the MVD an order to cancel the vehicle's registration.

- D.** The Director shall not issue a waiver to a vehicle under any of the circumstances described in subsections (D)(1) through (4).

- E.** The fee for a certificate of waiver under this Section shall be fixed by the Director according to A.R.S. § 49-543, and shall be based upon the Director's estimated costs to the state for administering and enforcing the provisions of this Article for issuance of certificates of waiver under this Section. The fee shall be payable at the time the certificate of waiver is issued.
- F.** If a waiver inspector denies a certificate of waiver under this Section, the vehicle owner may request review of the denial by a state inspector.

**G.** The maximum required repair cost for vehicles in Area B, not including tampering repair cost, is:

1. For a diesel-powered vehicle with a GVWR greater than 26,000 pounds or a diesel-powered vehicle with tandem axles: \$300; and

In addition to the definitions contained in Article 1 of this Chapter, and A.R.S. § 49-401.01, the following definitions apply to this Article:

- "Account holder" means any person or entity who has opened an account in the emissions bank under R18-2-1206.
- "Certification authority" means the Department or the county or multi-county district to which the Department has delegated authority to certify emission reduction credits under A.R.S. § 49-410(C).
- "Certified credit" means an emission reduction credit that has been issued under R18-2-1203(C)(2), R18-2-1204(B), or R18-2-1205(E)(3).
- "Conditional credit" means an emission reduction credit for a reduction in emissions by a plan generator that the certification

authority has issued under R18-2-1205(D)(2) but the Administrator has not yet approved under R18-2-1205(E)(3).

"Emissions bank" means the system created by the Department to record and make publicly available information on the issuance, certification, transfer, retirement, and use of emission reduction credits.

"Emission reduction credit" or "credit" means a reduction in qualifying emissions expressed in tons per year for which the generator has submitted an application under R18-2-1203, R18-2-1204, or R18-2-1205 and which has not been withdrawn from the emissions bank under R18-2-1208(B)(5) or (C).

"Emission reduction plan" means a plan submitted under R18-2-1205 for assuring that reductions in qualifying emissions by a plan generator are permanent, quantifiable, surplus, enforceable, and real.

"Enforceable" means that specific measures for assessing compliance with an emissions limitation, control, or other requirement are established in a permit, offset-creation rule, or emission reduction plan in a manner that allows compliance to be readily determined by an inspection of records and reports.

"Form" means a paper document or online form provided through a web portal.

"Generator" means any permitted source or other activity that has made or proposes to make reductions in qualifying emissions.

"Issue," with respect to emission reduction credits, means to create and provide evidence of the creation of conditional credits or certified credits in the form or manner prescribed by the Department.

"Offset-creation rule" means a state, county, or multi-county district rule that has been approved into the state implementation plan and provides a method for allowing emission reductions from specific activities to qualify as offsets. Rule 242 of the Maricopa County Air Pollution Control Regulations is an example of an offset-creation rule.

"Offsets" means reductions in emissions required under R18-2-404 or the equivalent rule of a county or multi-county district.

"Pending credits" means emission reduction credits for which an application has been submitted under R18-2-1203, R18-2-1204, or R18-2-1205 but that have not yet been issued as conditional or certified credits.

"Permanent" means that the reduction in qualifying emissions are long-lasting and unchanging for the remaining life of the relevant activity.

"Permitted generator" means a generator that is a stationary source subject to a permit, other than a general permit, issued under A.R.S. § 49-426 or 49-480 and that seeks credits for reductions that are or will be made enforceable through permit condition.

"Plan generator" means a generator that intends to achieve or has achieved reductions in qualifying emissions in compliance with an emission reduction plan under R18-2-1205.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

*“Qualifying emissions” means emissions of any conventional air pollutant, other than elemental lead, or any precursor of a conventional air pollutant from any activity. Qualifying emissions does not include emissions from a fleet of motor vehicles if the fleet operates outside of a nonattainment area. A.R.S. § 49-410(H)(2).*

“Quantifiable” means that the amount, rate, and characteristics of a reduction in qualifying emissions can be measured through reliable, replicable methods.

“Real” means that a reduction in qualifying emissions is a reduction in actual emissions released to the air resulting from a physical change or change in the method of operations of a generator.

“Regulatory generator” means a generator that has achieved reductions in qualifying emissions in compliance with an offset-creation rule.

“Surplus” means that a reduction in qualifying emissions is not otherwise required by an applicable requirement and not relied upon in the state implementation plan.

“Ton” includes fraction of a ton as necessary to reflect the total amount of emissions reductions achieved or to be achieved by a generator.

- D. Operational Standards.
- 1. Process equipment and control device operations. At all times, including periods of startup, shutdown, and malfunction, the owner or operator shall, to the extent practicable, maintain and operate smelter processes and associated emission control and/or control equipment in a manner consistent with good air pollution control practices for minimizing SO<sub>2</sub> emissions to the levels required by subsection (C). Determination of whether acceptable operating and maintenance procedures are being used will be based on all information available to the Director and EPA Region IX, which may include, but is not limited to, monitoring results, review of operating and maintenance procedures and records, and inspection of the relevant equipment.
  - 2. Capture system and control device operations and maintenance plan. The owner or operator shall develop and implement an operations and maintenance plan for each capture system and/or control device used to ventilate or control process gas or emissions from the flash furnace including matte tapping, slag skimming, and slag return operations; converter primary hoods, converter secondary hoods, tertiary ventilation system, and anode refining operations. All CEMS required by subsection (E)(1) shall complete at least one cycle of operation (sampling, analyzing, and data recording) for each successive 15-minute period.
  4. If the owner or operator can demonstrate to the Director that measurement of stack gas volumetric flow rate in the outlet of any particular piece of SO<sub>2</sub> control equipment would yield inaccurate results or would be technologically infeasible, then the Director may allow measurement of the flow rate at an alternative sampling point.
  5. The owner or operator shall demonstrate that the CEMS required by subsection (E)(1) meet all of the following requirements:

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

The CEMS on the anode furnace baghouse stack and tertiary ventilation system shall complete an initial Relative Accuracy Test Audit (RATA) in accordance with Performance Specification 2. The RATA runs shall be tied to when the anode furnace is in use and, for the tertiary system, when the converters are in operation and/or material is being transferred in the converter aisle. Asarco may petition the Department and EPA Region IX on the criteria for subsequent RATAs for the anode furnace baghouse stack or tertiary ventilation system CEMS. The petition shall include submittal of CEMS data during the year.
  - b. The SO<sub>2</sub> CEMS installed and operated under this Section meets the quality assurance requirements of 40 CFR 60, Appendix F.

The owner or operator shall make available a record of these procedures that clearly shows instrument readings before and after zero adjustment and calibration.
  - f. The owner or operator shall maintain on hand and ready for immediate installation sufficient spare parts or duplicate systems for the CEMS required by this Section to allow for the replacement within six hours of any monitoring equipment part that fails or malfunctions during operation.

The Department must determine the demonstration adequate to approve the petition. Annual stack testing shall use EPA Methods 1, 4, and 6C in 40 CFR 60 Appendix A or an alternate method approved by the Department and EPA Region IX. Annual stack testing shall commence no later than the one year after the date the continuous emission monitoring system was removed. The owner or operator shall submit a test protocol to the Department at least 30 days in advance of testing.       - b. Divide the total amount of SO<sub>2</sub> emissions calculated from subsection (F)(1)(a) by 336 to calculate the 14-operating day average SO<sub>2</sub> emissions.
      - c. If the calculation in subsection (F)(1)(b) exceeds 1069.1 pounds per hour, then the owner or operator shall sum the hourly pounds of SO<sub>2</sub> vented to each uncontrolled shutdown ventilation flue and through each monitoring point listed in subsection (E)(1) for each hour of the current operating day and each hour of the preceding 13-operating days to ascertain if any hour exceeded 1,518 pounds per hour.
    2. When no valid hour or hours of data have been recorded by a continuous monitoring system required by subsections (E)(1) and (E)(2) and the associated process unit is operating, the owner or operator shall calculate substitute data for each such period according to the following procedures:
      - a. For a missing data period less than or equal to 24 hours, substitute the average of the hourly SO<sub>2</sub> concentrations recorded by the system for the hour before and the hour after the missing data period.

        - i. The 90th percentile hourly SO<sub>2</sub> concentrations recorded by the system during the previous 720 quality-assured monitor operating hours.
        - ii. The average of the hourly SO<sub>2</sub> concentrations recorded by the system for the hour before and the four hours after the missing data period.
      - c. Notwithstanding subsections (F)(3)(a) and (F)(3)(b), the owner or operator may present any credible evidence as to the quantity or concentration of emissions during any period of missing data.
    3. The owner or operator shall determine compliance with the requirements in subsection (D)(2) as follows:
      - a. Maintaining and operating the emissions capture and control equipment in accordance with the capture system and control device operations and maintenance plan required in subsection (D)(2) and recording operating parameters for capture and control equipment as required in subsection (D)(2)(b); and

    - a. The operations and maintenance plan must address the following requirements as applicable to each capture system and control device:
      - i. Monitoring devices. The plan shall provide for installation, operation, calibration, and maintenance of appropriate monitoring devices to measure and record operating limit or range values at all times the required system is operating. Dampers that are manually set and remain in the same position while the capture system is operating are exempt from these monitoring requirements.
      - ii. Operational limits and ranges. as initially submitted pursuant to subsection (D)(2). The owner or operator shall submit plan revisions for review by the Department and EPA Region IX. At any time, the Department and/or EPA Region IX may require the owner or operator to revise the plan if determined to be inconsistent with subsection (D)(2)(a). Within 60 days of receiving written notification from the Department or EPA Region IX specifying such inconsistency, the owner or operator shall submit a proposal to the Department and EPA Region IX that addresses the inconsistency. The owner or operator shall maintain a current copy of the plan onsite and available for review and inspection upon request.

## E. Monitoring.

1. To determine compliance with subsection (C), the owner or operator shall install, calibrate, maintain, and operate continuous monitoring systems to monitor and record SO<sub>2</sub> concentrations and stack gas volumetric flow rates at the following locations.
  - a. The acid plant tail gas stack;
  - b. The vent fume stack;
  - c. The aisle scrubber stack; and
  - d. The bypass stack.
2. To determine compliance with the emission limit in subsection (C), the owner or operator shall install, calibrate, maintain, and operate a continuous monitoring system to monitor and record fugitive SO<sub>2</sub> concentrations at the Miami Smelter roofline.
3. Except during periods of continuous monitoring system breakdown, repairs, maintenance, out-of-control periods, calibration checks, and zero and span adjustments, the owner or operator shall continuously monitor SO<sub>2</sub> concentrations and stack gas volumetric flow rates at each location specified in subsection (E)(1) and use the monitored concentrations and volumetric flow rates when demonstrating compliance with the SO<sub>2</sub> emission limit in subsection (C) in accordance with subsection (F).
4. Except during periods of continuous monitoring system breakdown, repairs, maintenance, out-of-control periods, calibration checks and zero and span adjustments, the owner or operator shall continuously monitor fugitive SO<sub>2</sub> emissions at the Miami Smelter roofline and use the monitored concentrations and volumetric flow rates when demonstrating compliance with the SO<sub>2</sub> emission limit in subsection (C) in accordance with subsection (F).
5. For purposes of subsections (E)(3) and (E)(4), continuous monitoring means the taking and recording of at least one measurement of SO<sub>2</sub> concentration and stack gas flow rate reading from the effluent of each affected stack, outlet, or other approved measurement location in each 15-minute period when the associated process units are operating. Fifteen-minute periods start at the beginning of each clock hour, and run consecutively. All continuous monitoring systems required by subsection (E)(1) shall complete at least one cycle of operation (sampling, analyzing, and data recording) for each successive 15-minute period.
6. If the owner or operator can demonstrate to the Director and EPA Region IX that measurement of stack gas volumetric flow rate in the outlet of any particular piece of SO<sub>2</sub> control equipment would yield inaccurate results or would be technologically infeasible, then the Director and EPA Region IX may allow measurement of the flow rate at an alternative sampling point.
7. The owner or operator shall demonstrate that the continuous monitoring systems required by subsection (E)(1) meet all of the following requirements:
  - a. Each SO<sub>2</sub> continuous monitoring system shall meet the specifications under 40 CFR 60, Appendix B, Performance Specification 6.
  - b. Each SO<sub>2</sub> continuous monitoring system installed and operated under this Section shall also meet the quality assurance requirements of 40 CFR 60, Appendix F, Procedure 1.
  - c. The owner or operator shall notify the Director in writing at least 30 days in advance of the start of the relative accuracy test audit (RATA) procedures performed on each continuous monitoring system.
  - d. The Director shall approve the location of all sampling points for monitoring SO<sub>2</sub> concentrations and stack gas volumetric flow rates in writing before installation and operation of measurement instruments.
  - e. The span of each continuous monitoring system for the acid plant tail stack, vent fume stack, and aisle scrubber stack shall be set at a SO<sub>2</sub> concentration of zero to 0.20% by volume.
  - f. The span of the continuous monitoring system for the bypass stack shall be set at a SO<sub>2</sub> concentration of zero to 20% by volume.
  - g. The zero (or low-level value between 0 and 20% of the span value) and span (50% to 100% of span value) calibration drifts shall be checked at least once each operating day in accordance with a written procedure. The zero and span must, at a minimum, be adjusted whenever either the 24-hour zero drift or the 24-hour span drift exceeds two times the limit in 40 CFR Part 60, Appendix B, Performance Specification 2. The system must allow the amount of the excess zero and span drift to be recorded and quantified.
  - h. The owner or operator shall maintain on hand and ready for immediate installation sufficient spare parts or duplicate systems for the continuous monitoring system equipment required by this Section to allow for the replacement within six hours of any monitoring system equipment part that fails or malfunctions during operation.
8. The owner or operator shall develop and implement a roofline fugitive emissions monitoring plan for the continuous monitoring system required by subsection (E)(2). The owner or operator shall submit the initial plan to the Department and EPA Region IX for review and approval by July 1, 2017.
  - a. The roofline fugitive emissions monitoring plan must address the following requirements:
    - i. The continuous monitoring system required by subsection (E)(2) must include measurement of fugitive emissions from, at a minimum, the Converter, Electric Furnace, Anode Furnace, and IsaSmelt<sup>®</sup> systems that is representative of total fugitive emissions.
    - ii. Each measurement system shall include at least one SO<sub>2</sub> analyzer and sufficient sampling locations that ensure collection of a representative sample along the roof monitor for each monitor

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- system. The number of sample probes and their locations for each monitoring system shall account for the physical configuration of the vent, the locations of emitting activities relative to the vent, and heat generated by the equipment served by the vent.
- iii. Each measurement system shall include validation of adequate velocity for flow measurements and sufficient flow and temperature sensors to ensure calculation of representative exhaust flows through each vent. The number of such sensors and their locations for each monitoring system shall account for the physical configuration of the vent, the locations of emitting activities relative to the vent, and heat generated by the equipment served by the vent.
  - iv. Each measurement system shall include an on-site data collection system that continuously logs and stores the measured SO<sub>2</sub> concentration, the measured flow velocity, and the measured temperature.
  - v. An appropriate range for zero-span drift shall be established for all SO<sub>2</sub> analyzers to ensure proper calibration and operation. Unless otherwise provided in the roofline fugitive emissions monitoring plan required by subsection (E)(8), the zero (or low-level) value determination shall be made using a gas containing between zero to 20% of the span value for SO<sub>2</sub> and the span (or high-level) value determination shall be made using a certified gas with a value between 50% and 100% of the span value for SO<sub>2</sub>. For each SO<sub>2</sub> analyzer, a daily zero-span check shall be performed by introducing zero gas and a known concentration of span gas to the analyzer. If the zero or span drift for an analyzer is greater than 5% of the span gas concentration for five consecutive days or greater than 10% of the span gas concentration for one day, the analyzer shall be found to be operating improperly and appropriate measures shall be taken to return the analyzer to proper operation. The zero-span check shall be repeated after any such corrective action is taken.
  - vi. All SO<sub>2</sub> analyzers shall be inspected quarterly by the owner or operator and inspected annually by an independent auditor. The inspections shall be conducted in accordance with the data accuracy assessment requirements of 40 CFR 60, Appendix F, Procedure 1, Section 5 or as otherwise provided in the roofline fugitive emissions monitoring plan required by subsection (E)(8). The quarterly inspections consist of two certified concentrations of SO<sub>2</sub> to each sample probe system and comparing the known concentrations to the concentrations logged by the corresponding on-site data collection system to generate a relative error for each system.
  - vii. The flow and temperature data shall be checked daily for proper operation of flow and temperature sensors in accordance with the roofline fugitive emissions monitoring plan required by subsection (E)(8). If a flow or temperature sensor is found to be operating improperly, appropriate measures shall be taken to return the sensor to proper operation.
  - viii. All temperature sensors shall be inspected annually. The inspection shall be conducted according to the manufacturer's specification. A temperature sensor tolerance range representative of proper sensor operation shall be established in the roofline fugitive emissions monitoring plan required by subsection (E)(8). If a temperature sensor is found to measure outside of an established tolerance range, the sensor shall be found to be operating improperly and appropriate measures shall be taken to return the sensor to proper operation.
  - ix. All flow sensors shall be calibrated semi-annually with calibration tools according to the manufacturer's specifications. A calibration tool range representative of proper sensor operation shall be established in the roofline fugitive emissions monitoring plan required by subsection (E)(8). If a flow sensor is found to measure outside of an established range, the sensor shall be found to be operating improperly and appropriate measures shall be taken to return the sensor to proper operation.
- b. The owner or operator shall operate and maintain the continuous monitoring system required by subsection (E)(2) in accordance with the roofline fugitive emissions monitoring plan required by subsection (E)(2) and as approved by the Department and EPA Region IX, except as provided herein. Until receiving initial approval of the plan, the owner or operator shall operate and maintain the continuous monitoring system required by subsection (E)(2) in accordance with the plan as initially submitted pursuant to subsection (E)(2). The owner or operator shall keep the plan current and consistent with subsection (E)(8)(a). The owner or operator shall maintain a current copy of the plan onsite and available for review and inspection upon request. The Department and/or EPA Region IX may require the owner or operator to revise the plan if determined to be inconsistent with subsection (E)(8)(a). Within 60 days of receiving written notification from the Department or EPA Region IX specifying such inconsistency, the owner or operator shall submit a proposal to the Department and EPA Region IX that addresses the inconsistency.
- F. Compliance Demonstration Requirements.
- 1. Within 180 days of the effective date set forth in subsection (A)(2), the owner or operator shall demonstrate compliance with the emission limit in subsection (C) by calculating SO<sub>2</sub> emissions for each operating day as follows:
    - a. Sum the hourly pounds of SO<sub>2</sub> measured by the continuous monitoring systems required by subsection (E)(1) and (E)(2) for the current operating day and the preceding 29 operating days to calculate the total pounds of SO<sub>2</sub> emissions over the 30-operating day averaging period.
    - b. Multiply the operating days occurring during a 30-day averaging period by 24 to calculate the total operating hours over the most recent 30-operating day period.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- c. Divide the total amount of SO<sub>2</sub> emissions calculated from subsection (F)(1)(a) by the total operating hours calculated from subsection (F)(1)(b) to calculate the 30-day rolling hourly average SO<sub>2</sub> emissions.
  2. For the continuous monitoring systems required by subsections (E)(1) and (E)(2), hourly emissions shall be computed as follows:
    - a. Except as provided under subsection (F)(2)(c), for a full operating hour (any clock hour with 60 minutes of unit operation), at least four valid data points are required to calculate the hourly average, i.e., one data point in each of the 15-minute quadrants of the hour.
    - b. Except as provided under subsection (F)(2)(c), for a partial operating hour (any clock hour with less than 60 minutes of unit operation), at least one valid data point in each 15-minute quadrant of the hour in which the unit operates is required to calculate the hourly average.

      - ii. If the unit operates in only one quadrant of the hour, at least one valid data point is required to calculate the hourly average.
    - d. If a daily calibration error check is failed during any operating hour, all data for that hour shall be invalidated, unless a subsequent calibration error test is passed in the same hour and the requirements of subsection (F)(2)(c) are met, based solely on valid data recorded after the successful calibration.
    - e. For each full or partial operating hour, all valid data points shall be used to calculate the hourly average.
    - f. Data recorded during periods of continuous monitoring system breakdown, repair, maintenance, out of control periods, calibration checks, and zero and span adjustments shall not be included in the data averages computed under subsection (F)(3).
    - g. Either arithmetic or integrated averaging of all data may be used to calculate the hourly average. The data may be recorded in reduced or non-reduced form.
  3. When no valid hour or hours of data have been recorded by a continuous monitoring system required by subsections (E)(1) and (E)(2) and the associated process unit is operating, the owner or operator shall calculate substitute data for each such period according to the following procedures:
    - a. For a missing data period less than or equal to 24 hours, substitute the average of the hourly SO<sub>2</sub> concentrations recorded by the system for the hour before and the hour after the missing data period.
    - b. For a missing data period greater than 24 hours, substitute the greater of:
      - i. The 90th percentile hourly SO<sub>2</sub> concentrations recorded by the system during the previous 720 quality-assured monitor operating hours; or
      - ii. The average of the hourly SO<sub>2</sub> concentrations recorded by the system for the hour before and the hour after the missing data period.
  4. The owner or operator shall include periods of startup, shutdown, malfunction, or other upset conditions when determining compliance with the emission limit in subsection (C).
- G. Recordkeeping.

18. "Hot-spot analysis" means an estimation of likely future localized CO and PM<sub>10</sub> pollutant concentrations and a comparison of those concentrations to the national ambient air quality standards. Pollutant concentrations to be estimated should be based on the total emissions burden which may result from the implementation of a single, specific project, summed together with future background concentrations (which can be estimated using the ratio of future to current traffic multiplied by the ratio of future to current emission factors) expected in the area. The total concentration shall be estimated and analyzed at appropriate receptor locations in the area substantially affected by the project. Hot-spot analysis assesses impacts on a scale smaller than the entire nonattainment or maintenance area, including, for example, congested roadway intersections and highways or transit terminals, and uses an air quality dispersion model to determine the effects of emissions on air quality.
19. "Incomplete data area" means any ozone nonattainment area which EPA has classified, in 40 CFR 81, as an incomplete data area.

"Motor vehicle emissions budget" means that portion of the total allowable emissions defined in a revision to the applicable implementation plan (or in an implementation plan revision which was endorsed by the Governor or Director of ADEQ, subject to a public hearing, and submitted to EPA, but not yet approved by EPA) for a certain date for the purpose of meeting reasonable further progress milestones or attainment or maintenance demonstrations, for any criteria pollutant or its precursors, allocated by the applicable implementation plan to highway and transit vehicles. The applicable implementation plan for an ozone nonattainment area may also designate a motor vehicle emissions budget for oxides of nitrogen (NO<sub>x</sub>) for a reasonable further progress milestone year if the applicable implementation plan demonstrates that this NO<sub>x</sub> budget will be achieved with measures in the implementation plan (as an implementation plan must do for VOC milestone requirements). The applicable implementation plan for an ozone nonattainment area includes a NO<sub>x</sub> budget if NO<sub>x</sub> reductions are being substituted for reductions in volatile organic compounds in milestone years required for reasonable further progress.

32. "Not classified area" means any carbon monoxide nonattainment area which EPA has not classified as either moderate or serious.
33. "Phase II of the interim period" with respect to a pollutant or pollutant precursor means that period of time after December 27, 1993, lasting until the earlier of the following:

- D. The provisions of this Article apply with respect to emissions of the following criteria pollutants: ozone, carbon monoxide, nitrogen dioxide, and particles with an aerodynamic diameter less than or equal to a nominal 10 micrometers (PM<sub>10</sub>).
- E. The provisions of this Article apply with respect to emissions of the following precursor pollutants:
  1. Volatile organic compounds and nitrogen oxides in ozone areas (unless the Administrator determines under § 182(f) of the CAA that additional reductions of NO<sub>x</sub> would not contribute to attainment).
  2. Nitrogen oxides in nitrogen dioxide areas.
  3. Volatile organic compounds, nitrogen oxides, and PM<sub>10</sub> in PM<sub>10</sub> areas if either of the following apply:
    - a. During the interim period, the EPA Regional Administrator or the Director of ADEQ has made a finding (including a finding in an applicable implementation plan or a submitted implementation plan revision) that transportation-related precursor emissions within the nonattainment area are a significant contributor to the PM<sub>10</sub> nonattainment problem and has so notified ADOT or the MPO where one exists and USDOT.
    - b. During the transitional, control strategy, and maintenance periods, the applicable implementation plan or implementation plan submission establishes a budget for such emissions as part of the reasonable further progress, attainment, or maintenance strategy.
- F. Projects subject to this Article for which the NEPA process and a conformity determination have been completed by FHWA or FTA may proceed toward implementation without further conformity determinations if one of the following major steps has occurred within the most recent three-year period: NEPA process completion; formal start of final design; acquisition of a significant portion of the right-of-way; or approval of the plans, specifications, and estimates. All phases of such projects which were considered in the conformity determination are also included, if those phases were for the purpose of funding, final design, right-of-way acquisition, construction, or any combination of these phases.
- G. A new conformity determination for the project will be required if there is a significant change in project design concept and scope, if a supplemental environmental document for air quality purposes is initiated, or if no major steps to advance the project have occurred within the most recent three-year period.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1403. Priority**

When assisting or approving any action with air quality-related consequences, FHWA and FTA shall give priority to the implementation of those transportation portions of an applicable implementation plan prepared to attain and maintain the NAAQS. This priority shall be consistent with statutory requirements for allocation of funds among states or other jurisdictions.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1404. Frequency of Conformity Determinations**

- A. Conformity determinations and conformity redeterminations for transportation plans, TIPs, and FHWA or FTA projects

shall be made according to the requirements of this Section and the applicable implementation plan.

- B. Each new transportation plan shall be found to conform before the transportation plan is approved by the MPO or accepted by USDOT.
- C. All transportation plan revisions shall be found to conform before the transportation plan revisions are approved by the MPO or accepted by USDOT, unless the revision merely adds or deletes exempt projects listed in R18-2-1434 and has been made in accordance with the notification provisions contained in R18-2-1405. The conformity determination shall be based on the transportation plan and the revision taken as a whole.
- D. An existing conformity determination shall lapse unless conformity of existing transportation plans is redetermined:
  1. By May 25, 1995, unless previously redetermined consistent with 40 CFR 51, subpart T.
  2. Within 18 months after EPA approval of an implementation plan revision which either:
    - a. Establishes or revises a transportation-related emissions budget (as required by CAA §§ 175A(a), 182(b)(1), 182(c)(2)(A), 182(c)(2)(B), 187(a)(7), 189(a)(1)(B), and 189(b)(1)(A); and §§ 192(a) and 192(b), for nitrogen dioxide); or
    - b. Adds, deletes, or changes TCMs.
  3. Within 18 months after EPA promulgation of an implementation plan which establishes or revises a transportation-related emissions budget or adds, deletes, or changes TCMs.
- E. In any case, conformity determinations shall be made no less frequently than every three years, or the existing conformity determination will lapse.
- F. A new TIP shall be found to conform before the TIP is approved by the MPO or accepted by USDOT.
- G. A TIP amendment requires a new conformity determination for the entire TIP before the amendment is approved by the MPO or accepted by USDOT, unless the amendment merely adds or deletes exempt projects listed in R18-2-1434 and has been made in accordance with the notification procedures under R18-2-1405.
- H. After an MPO adopts a new or revised transportation plan, TIP conformity shall be redetermined by the MPO and USDOT within six months from the date of adoption of the plan, unless the new or revised plan merely adds or deletes exempt projects listed in R18-2-1434. Otherwise, the existing conformity determination for the TIP shall lapse.
- I. In any case, TIP conformity determinations shall be made no less frequently than every three years or the existing TIP conformity determination shall lapse.
- J. FHWA or FTA projects shall be found to conform before they are adopted, accepted, approved, or funded. Conformity shall be redetermined for any FHWA or FTA project if none of the following major steps has occurred within the most recent three-year period:
  1. NEPA process completion,
  2. Start of final design,
  3. Acquisition of a significant portion of the right-of-way,
  4. Approval of the plans, specifications, and estimates.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1405. Consultation**

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- traveled (VMT) forecasting. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
2. Determining whether the responsible agency identified in R18-2-1433 has demonstrated that the requirements of R18-2-1416, R18-2-1418 and R18-2-1419 are satisfied without a particular mitigation or control measure. The consultation process pursuant to this subsection shall be initiated by the responsible agency.
  3. Making a determination, as required by R18-2-1429(C)(2), whether the project is included in the regional emissions analysis supporting the currently conforming TIP's conformity determination, even if the project is not included in the TIP for the purposes of MPO project selection or endorsement, and whether the project's design concept and scope have changed significantly from those which were included in the regional emissions analysis, or in a manner which would significantly impact use of the facility. The consultation process pursuant to this subsection shall be initiated by the MPO. In nonattainment areas where no MPO exists, ADOT shall initiate the consultation process for making a determination, as required by R18-2-1429(C)(2), whether a project that is outside of a TIP is included in the regional emissions analysis, and whether the project's design concept and scope have changed significantly from those which were included in the regional emissions analysis, or in a manner which would significantly impact use of the facility.
  4. Determining pursuant to subsection (R) which minor arterials and other transportation projects should be considered "regionally significant" for the purposes of regional emissions analysis and which projects should be considered to have a significant change in design concept and scope from the transportation plan or TIP. The consultation process pursuant to this subsection shall be initiated by the MPO. In nonattainment areas where no MPO exists, ADOT shall initiate the consultation process for determining pursuant to subsection (R) which minor arterials and other transportation projects should be considered "regionally significant" for the purposes of regional emissions analysis.
  5. Evaluating whether exempt projects as described in R18-2-1434 and R18-2-1435 should be treated as non-exempt in cases where potential adverse emissions impacts may exist for any reason. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
  6. Making a determination, as required by R18-2-1413, whether past obstacles to implementation of TCMs which are behind the schedule established in the applicable implementation plan have been identified and are being overcome, and whether state and local agencies with influence over approvals or funding for TCMs are giving maximum priority to approval or funding for TCMs. This consultation process shall also consider whether delays in TCM implementation necessitate revisions to the applicable implementation plan to remove TCMs or to substitute TCMs or other emission reduction measures. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
  7. Identifying, as required by R18-2-1431, projects located at sites in PM<sub>10</sub> nonattainment areas which have vehicle and roadway emission and dispersion characteristics which are essentially identical to those at sites which have violations verified by monitoring, and therefore require quantitative PM<sub>10</sub> hot-spot analysis. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
  8. Notification of transportation plan or TIP revisions or amendments which merely add or delete exempt projects listed in R18-2-1434. Notice shall be provided by the MPO and need not be provided prior to final action. Notice shall be provided by ADOT for revisions and amendments affecting the state transportation plan and the state TIP. The public involvement process described in subsection (P) is not required for the purposes of this subsection.
  9. Project-level conformity determinations pursuant to R18-2-1416. The consultation process pursuant to this subsection shall be initiated by the recipient of the funds designated under 23 U.S.C. or the Federal Transit Act.
- N. A consultation process involving the MPO, ADEQ, a county air pollution control agency where one exists, ADOT, appropriate political subdivisions, regional transportation agencies, if any, and the public shall be undertaken for the following:
1. Evaluating events which will trigger new conformity determinations in addition to those triggering events established in R18-2-1404 and including any changes in planning assumptions that may trigger a new conformity determination. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
  2. Consulting on emissions analysis for transportation activities which cross the borders of MPOs or nonattainment areas or air basins. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists. The public involvement process described in subsection (P) is not required for the purposes of this subsection.
  3. Where the metropolitan planning area does not include the entire nonattainment or maintenance area, a consultation process involving the MPO and ADOT for cooperative planning and analysis for purposes of determining conformity of all projects outside the metropolitan area and within the nonattainment or maintenance area. The consultation process pursuant to this subsection shall be initiated by ADOT. The public involvement process described in subsection (P) is not required for the purposes of this subsection.
  4. The design, schedule, and funding of research and data collection efforts and regional transportation model development. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
  5. Determining that a conforming project approved with mitigation no longer requires mitigation. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
- O. The following consultation processes involve recipients of funds designated under 23 U.S.C. or the Federal Transit Act:
1. A consultation process involving the MPO, ADEQ, a county air pollution control agency where one exists, ADOT, recipients of funds designated under 23 U.S.C. or the Federal Transit Act and any agency created under state law that sponsors or approves transportation projects shall be undertaken to assure that plans for construction of regionally significant projects which are not FHWA or

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

FTA projects, including projects for which alternative locations, design concept or scope, or the no-build option are still being considered, are disclosed as soon as practicable to ADOT or the MPO where one exists, so as to assure that any significant changes to the design concept or scope of those plans are disclosed as soon as practicable. The political subdivision having authority to adopt or approve a regionally significant transportation project, and any agency that becomes aware of any such project through applications for approval, permitting, funding, or otherwise shall disclose such project to ADOT or the MPO if one exists as soon as practicable. To help assure timely disclosure, the political subdivision having authority to adopt or approve any potential regionally significant transportation project shall disclose to ADOT or the MPO on a schedule prescribed by ADOT or the MPO, whichever is appropriate, each project for which alternatives have been identified through the NEPA process and, in particular, any preferred alternative that may be a regionally significant project. The consultation process shall include assuming the location, design concept, and scope of the project, where the sponsor has not yet decided these features, in sufficient detail to allow ADOT or the MPO to perform a regional emissions analysis. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.

2. A consultation process involving the MPO, ADEQ, a county air pollution control agency where one exists, ADOT, recipients of funds designated under 23 U.S.C. or the Federal Transit Act, any agency created under state law that sponsors or approves transportation projects, and the public shall be undertaken for the development of procedures as described in R18-2-1429. The consultation process pursuant to this subsection shall be initiated by ADOT or the MPO where one exists.
- P. Public involvement processes shall be conducted according to the requirements of this subsection.**
1. ADOT or the MPO, where one exists, when making conformity determinations on transportation plans, programs, and projects shall establish and continuously implement a proactive public involvement process which provides opportunity for public review and comment prior to taking formal action on a conformity determination for all transportation plans and TIPs, that meets the following minimum requirements:
    - a. Includes a process that provides complete information, timely public notice, full public access to key decisions and supports early and continuing involvement of the public in developing plans and TIPs.
    - b. Requires a minimum public comment period of 45 days before the public involvement process is initially adopted or revised.
    - c. Provides timely information about transportation issues and processes to citizens, affected public agencies, representatives of transportation agency employees, private providers of transportation, other interested parties and segments of the community affected by transportation plans, programs, and projects, including but not limited to central city and other local jurisdiction concerns.
    - d. Provides reasonable public access to technical and policy information used in the development of plans and TIPs and open public meetings where matters related to the federal-aid highway and transit programs are being considered.
  - e. Requires adequate public notice of public involvement activities and time for public review and comment at key decision points, including, but not limited to, approval of plans and TIPs and approval of changes in plans and TIPs. In nonattainment areas classified as serious and above, the comment period shall be at least 30 days for the plan, TIP, and major amendments. Public notice shall include mailing of notice to a list of all persons who have requested notice of actions covered by this Article.
  - f. Demonstrates explicit consideration and response to public input received during the planning and program development processes.
  - g. Seeks out and considers the needs of those traditionally underserved by existing transportation systems, including but not limited to low-income and minority households.
  - h. When significant written and oral comments are received on a draft transportation plan or TIP, including the financial plan, as a result of the public involvement process or the consultation process required by this Section, a summary, analysis, and report on the disposition of comments shall be made part of the final plan and TIP.
  - i. If the final transportation plan or TIP differs significantly from the one which was made available for public comment by the MPO and it raises new material issues which interested parties could not reasonably have foreseen from the public involvement efforts, an additional opportunity for public comment on the revised plan or TIP shall be made available.
  - j. ADOT or the MPO where one exists shall specifically address in writing all public comments that known plans for a regionally significant transportation project which is not receiving FHWA or FTA funding or approval have not been properly reflected in the emissions analysis supporting a proposed conformity finding for a transportation plan or TIP.
  - k. Public involvement processes shall be periodically reviewed by ADOT or the MPO in terms of their effectiveness in assuring that the process provides full and open access to all.
    - l. These procedures will be reviewed by the FHWA and the FTA during certification reviews for TMAs, and as otherwise necessary for all MPOs, to assure that full and open access is provided to MPO decisionmaking processes.
  - m. Metropolitan public involvement processes shall be coordinated with statewide public involvement processes wherever possible to enhance public consideration of the issues, plans, and programs and to reduce redundancies and costs.
2. Local and regional transportation agencies when making conformity determinations on regionally significant transportation projects shall establish and implement a public involvement process which meets, at a minimum, the following requirements:
    - a. Provides to the affected agencies and interested members of the public information describing the upcoming decision process.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- b. Distributes or provides access to draft documents and all information needed for meaningful input.
  - c. Solicits early and continuing input from interested agencies and the public.
  - d. Provides an opportunity for informal question and answer on the draft document or proposed decision.
  - e. Provides an opportunity for formal written comment.
  - f. Provides for writing and distributing both a response to comments and the final document or decision. The response to comments shall consider the views of each agency and the public. The response to comments shall be made in a timely, substantive written manner prior to taking any final action and shall be made part of the record of any action.
- Q.** Any conflict among state agencies or between state agencies and an MPO shall be escalated to the Governor if the conflict cannot be resolved by the directors of the involved agencies. In the first instance, such entities shall make every effort to resolve any differences, including personal meetings between the directors of such entities or their policy-level representatives, to the extent possible. Within 14 calendar days after ADOT or the MPO has notified ADEQ of its decision, ADEQ may appeal a proposed determination of conformity, or other policy decision under this Article, to the Governor. ADEQ must provide notice of any appeal under this subsection to ADOT or the MPO. If ADEQ does not appeal to the Governor within 14 days, ADOT or the MPO may proceed with the final determination or decision. If ADEQ appeals to the Governor, the final conformity determination or policy decision shall have the concurrence of the Governor. The Governor may delegate to another official or agency within the state the role of hearing any appeal under this subsection and of deciding whether to concur in the determination or decision but may not delegate these functions to the director or staff of ADEQ, to any local air quality agency, to ADOT, to any state transportation commission or board, to an MPO, or to any agency that has responsibility for any of these functions.
- R.** The following procedures shall govern the consultation process regarding regionally significant transportation projects as defined in R18-2-1401(37):
1. By September 1, 1995, ADOT or the MPO where one exists shall develop and make available, for each nonattainment or maintenance area, consistent with A.R.S. § 49-408(A), the following:
    - a. A map of the highway or transit facilities in the nonattainment or maintenance area that serve regional transportation needs.
    - b. Guidance on which undertakings to implement or modify a highway facility are not transportation projects as defined in this Article, because they are not of sufficient length to address environmental matters on a broad scope.
    - c. Guidance on which types of transportation projects are normally included in the regional transportation model.
  2. The map and guidance described in subsection (R)(1) shall be produced only after consultation with ADEQ, a county air pollution control agency where one exists, ADOT, a transit authority where one exists, local and regional transportation agencies, and the public. The map developed pursuant to subsection (R)(1) shall be updated prior to the commencement of the next TIP or STIP development cycle, unless no changes have occurred. The guidance developed pursuant to subsection (R)(3) shall be revised as necessary to reflect changes in the regional transportation model.
  3. ADOT or the MPO where one exists shall develop and initiate the consultation process described in subsection (H) for a proposed list of transportation projects to be considered regionally significant. The consultation process shall include the MPO where one exists, ADEQ, a county air pollution control agency where one exists, ADOT, a transit authority where one exists, local and regional transportation agencies, EPA, USDOT, and the public. The list shall include information supporting the proposed classification.
  4. In determining whether a facility serves regional transportation needs, ADOT or the MPO where one exists shall consider at a minimum whether the facility:
    - a. Would be classified as a principal arterial based on average daily traffic or other factors, if not for limitations that the USDOT places on the percentage of streets that can be so classified.
    - b. For all other roadways, whether the facility:
      - i. Serves regional mobility needs, as opposed to local access.
      - ii. Carries regional traffic from one principal arterial to another.
      - iii. Is a modification that expands a facility such that it would serve regional transportation needs.
  5. For the purposes of this Article, a street with a lower classification than a collector street, as specified in the most recent federal classification map for the region, does not serve regional transportation needs.
  6. None of the following attributes, by itself, shall require a transportation project to be included in the modeling of a metropolitan area's transportation network:
    - a. The connection of a facility that does not serve regional transportation needs to a facility that does serve regional transportation needs.
    - b. The addition or modification of a lane other than a through lane.
- S.** An agency having a role or responsibility under this Section may delegate that role or responsibility to another entity pursuant to the applicable state law but shall notify all other parties to the consultation process of this fact when the delegation occurs and shall also provide to the other parties the name, address, and telephone number of one or more contact persons representing the entity that is accepting the delegated role or responsibility.
- T.** The provisions of this Section apply only to TIP and STIP planning cycles beginning with the cycles next following the effective date of this Section. The provisions of 40 CFR 51, Subpart T, continue to apply to all TIP and STIP planning cycles in progress at the time of the effective date of this Section. The provisions of this Section apply to consultation on projects and TIP amendments as of the effective date of this Section.
- Historical Note**  
Adopted effective June 15, 1995 (Supp. 95-2).
- R18-2-1406. Content of Transportation Plans**
- A.** For transportation plans adopted after January 1, 1995, in serious, severe, or extreme ozone nonattainment areas and in serious carbon monoxide nonattainment areas, the following shall apply:

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

1. The transportation plan shall specifically describe the transportation system envisioned for certain future years which shall be called horizon years.
2. The agency or organization developing the transportation plan, after consultation pursuant to R18-2-1405, may choose any years to be horizon years, subject to the following restrictions:
  - a. Horizon years may be no more than 10 years apart.
  - b. The first horizon year may be no more than 10 years from the base year used to validate the transportation demand planning model.
  - c. If the attainment year is in the time span of the transportation plan, the attainment year shall be a horizon year.
  - d. The last horizon year shall be the last year of the transportation plan's forecast period.
3. For these horizon years all of the following apply:
  - a. The transportation plan shall quantify and document the demographic and employment factors influencing expected transportation demand, including land-use forecasts, in accordance with implementation plan provisions and R18-2-1405.
  - b. The highway and transit system shall be described in terms of the regionally significant additions or modifications to the existing transportation network which the transportation plan envisions to be operational in the horizon years. Additions and modifications to the highway network shall be sufficiently identified to indicate intersections with existing regionally significant facilities and to determine their effect on route options between transportation analysis zones. Each added or modified highway segment shall also be sufficiently identified in terms of its design concept and design scope to allow modeling of travel times under various traffic volumes, consistent with the modeling methods for area-wide transportation analysis in use by the MPO. Transit facilities, equipment, and services envisioned for the future shall be identified in terms of design concept, design scope, and operating policies sufficiently to allow modeling of their transit ridership. The description of additions and modifications to the transportation network shall also be sufficiently specific to show that there is a reasonable relationship between expected land use and the envisioned transportation system.
  - c. Other future transportation policies, requirements, services, and activities, including intermodal activities, shall be described.
- B. Ozone or CO nonattainment areas which are reclassified from moderate to serious shall meet the requirements of subsection (A) within two years from the date of reclassification.
- C. Transportation plans for other areas shall meet the requirements of subsection (A) at least to the extent it has been the previous practice of the MPO to prepare plans which meet those requirements. Otherwise, transportation plans shall describe the transportation system envisioned for the future specifically enough to allow determination of conformity according to the criteria and procedures of R18-2-1409 through R18-2-1427.
- D. The requirements of this Section supplement other requirements of applicable law or regulation governing the format or content of transportation plans.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1407. Relationship of Transportation Plan and TIP Conformity with the NEPA Process**

The degree of specificity required in the transportation plan and the specific travel network assumed for air quality modeling do not preclude the consideration of alternatives in the NEPA process or other project development studies. Should the NEPA process result in a project with design concept and scope significantly different from that in the transportation plan or TIP, the project shall meet the criteria in R18-2-1409 through R18-2-1427 for projects not from a TIP before NEPA process completion.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1408. Fiscal Constraints for Transportation Plans and TIPs**

Transportation plans and TIPs shall demonstrate that they are fiscally constrained consistent with USDOT's metropolitan planning regulations at 23 CFR 450 in order to be found in conformity.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1409. Criteria and Procedures for Determining Conformity of Transportation Plans, Programs, and Projects: General**

- A. **R18-2-1410. Criteria and Procedures: Latest Planning Assumptions**

- A. During all periods the conformity determination, with respect to all other applicable criteria in R18-2-1411 through R18-2-1427, shall be based upon the most recent complete planning assumptions in force at the time of the conformity determination. The conformity determination shall satisfy the requirements of subsections (B) through (F).
- B. Assumptions, including vehicle miles traveled per capita or per household, trip generation per household, vehicle occupancy, household size, vehicle fleet mix, vehicle ownership, and the geographic distribution of population growth shall be derived from the estimates of current and future population, employment, travel, and congestion most recently used by ADOT or the MPO where one exists. Population estimates shall be consistent with the estimates developed by the Arizona Department of Economic Security pursuant to A.R.S. § 41-1954(A). The conformity determination shall also be based on the latest assumptions about current and future background concentrations.
- C. The conformity determination for each transportation plan and TIP shall discuss how transit operating policies (including fares and service levels) and assumed transit ridership have changed since the previous conformity determination.
- D. The conformity determination shall include reasonable assumptions about transit service and increases in transit fares and road and bridge tolls over time.
- E. The conformity determination shall use the latest existing information regarding the effectiveness of the TCMs which have already been implemented.
- F. Key assumptions shall be specified and included in the draft documents and supporting materials used for the interagency and public consultation required by R18-2-1405.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1411. Criteria and Procedures: Latest Emissions Model**

- A. During all periods the conformity determination shall be based on the latest emission estimation model available. This criterion is satisfied if the most current version of the motor vehicle emissions model specified by EPA for use in the preparation or revision of implementation plans in that state or area is used for the conformity analysis. Where EMFAC is the motor vehicle emissions model used in preparing or revising the applicable implementation plan, new versions shall be approved by EPA before they are used in the conformity analysis.
- B. Conformity analyses for which the emissions analysis was begun during the grace period or before the Federal Register notice of availability of the latest emission model, or during any grace period announced in such notice, may continue to

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

use the previous version of the model for transportation plans and TIPs. The previous model may also be used for projects if the analysis was begun during the grace period or before the Federal Register notice of availability, provided no more than three years have passed since the draft environmental document was issued.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1412. Criteria and Procedures: Consultation**

All conformity determinations shall be made according to the consultation procedures in R18-2-1405. This criterion applies during all periods. Until the implementation plan revision required by 40 CFR 51.396 is approved by EPA, the conformity determination shall be made according to the procedures in R18-2-1405. Once the implementation plan revision has been approved by EPA, this criterion is satisfied if the conformity determination is made consistent with the implementation plan's consultation requirements.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1413. Criteria and Procedures: Timely Implementation of TCMs**

- A. During all periods the transportation plan, TIP, or FHWA, or FTA project which is not from a conforming plan and TIP shall provide for the timely implementation of TCMs from the applicable implementation plan.
- B. For transportation plans, this criterion is satisfied if the following two conditions are met:
  1. The transportation plan, in describing the envisioned future transportation system, provides for the timely completion or implementation of all TCMs in the applicable implementation plan which are eligible for funding under 23 U.S.C. or the Federal Transit Act, consistent with schedules included in the applicable implementation plan.
  2. Nothing in the transportation plan interferes with the implementation of any TCM in the applicable implementation plan.
- C. For TIPs, this criterion is satisfied if all of the following conditions are met:
  1. An examination of the specific steps and funding source needed to fully implement each TCM indicates that TCMs which are eligible for funding under 23 U.S.C. or the Federal Transit Act are on or ahead of the schedule established in the applicable implementation plan, or, if such TCMs are behind the schedule established in the applicable implementation plan, the MPO and USDOT have determined that past obstacles to implementation of the TCMs have been identified and have been or are being overcome, and that all state and local agencies with influence over approvals or funding for TCMs are giving maximum priority to approval or funding of TCMs over other projects within their control, including projects in locations outside the nonattainment or maintenance area. Maximum priority to approval or funding of TCMs includes demonstrations with respect to funding acceleration, commitment of staff or other agency resources, diligent efforts to seek approvals, and similar actions.
  2. If federal funding intended for TCMs in the applicable implementation plan has previously been programmed but is reallocated to projects in the TIP other than TCMs, (or if there are no other TCMs in the TIP, to projects in the TIP other than projects which are eligible for federal

funding under ISTEA's Congestion Mitigation and Air Quality Improvement Program), and the TCMs are behind the schedule in the implementation plan, the TIP cannot be found to conform.

3. Nothing in the TIP may interfere with the implementation of any TCM in the applicable implementation plan.
- D. For FHWA or FTA projects which are not from a conforming transportation plan and TIP, this criterion is satisfied if the project does not interfere with the implementation of any TCM in the applicable implementation plan.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1414. Criteria and Procedures: Currently Conforming Transportation Plan and TIP**

During all periods there shall be a currently conforming transportation plan and currently conforming TIP at the time of project approval. This criterion is satisfied if the current transportation plan and TIP have been found to conform to the applicable implementation plan by the MPO and USDOT according to the procedures of this subpart. Only one conforming transportation plan or TIP may exist in an area at any time; conformity determinations of a previous transportation plan or TIP expire once the current plan or TIP is found to conform by USDOT. The conformity determination on a transportation plan or TIP will also lapse if conformity is not determined according to the frequency requirements of R18-2-1404.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1415. Criteria and Procedures: Projects from a Plan and TIP**

- A. During all periods the project shall come from a conforming transportation plan and program. Otherwise, the project shall satisfy all criteria in Table 1 of R18-2-1409 for a project not from a conforming transportation plan and TIP. A project is considered to be from a conforming transportation plan if it meets the requirements of subsection (B) and from a conforming program if it meets the requirements of subsection (C).
- B. A project is considered to be from a conforming transportation plan if one of the following conditions applies:
  1. For projects which are required to be identified in the transportation plan in order to satisfy R18-2-1406, the project is specifically included in the conforming transportation plan and the project's design concept and scope have not changed significantly from those which were described in the transportation plan, or in a manner which would significantly impact use of the facility.
  2. For projects which are not required to be specifically identified in the transportation plan, the project is identified in the conforming transportation plan, or is consistent with the policies and purpose of the transportation plan and will not interfere with other projects specifically included in the transportation plan.
- C. A project is considered to be from a conforming program if all of the following conditions are met:
  1. The project is included in the conforming TIP and the design concept and scope of the project were adequate at the time of the TIP conformity determination to determine its contribution to the TIP's regional emissions and have not changed significantly from those which were described in the TIP, or in a manner which would significantly impact use of the facility.
  2. If the TIP describes a project design concept and scope which includes project-level emissions mitigation or con-

trol measures, enforceable written commitments to implement such measures shall be obtained from the project sponsor or operator as required by R18-2-1433 in order for the project to be considered from a conforming program. Any change in these mitigation or control measures that would significantly reduce their effectiveness constitutes a change in the design concept and scope of the project.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1416. Criteria and Procedures: Localized CO and PM<sub>10</sub> Violations (Hot Spots)**

- A. During all periods any FHWA or FTA project shall not cause or contribute to any new localized CO or PM<sub>10</sub> violations or increase the frequency or severity of any existing CO or PM<sub>10</sub> violations in CO and PM<sub>10</sub> nonattainment and maintenance areas. This criterion is satisfied if it is demonstrated that no new local violations will be created and the severity or number of existing violations will not be increased as a result of the project.
- B. The demonstration shall be performed according to the requirements of R18-2-1405 and R18-2-1431.
- C. For projects which are not of the type identified by R18-2-1431(A) or R18-2-1431(D), this criterion may be satisfied if consideration of local factors clearly demonstrates that no local violations presently exist and no new local violations will be created as a result of the project. Otherwise, in CO nonattainment and maintenance areas, a quantitative demonstration shall be performed according to the requirements of R18-2-1431(B).

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1417. Criteria and Procedures: Compliance with PM<sub>10</sub> Control Measures**

During all periods any FHWA or FTA project shall comply with PM<sub>10</sub> control measures in the applicable implementation plan. This condition is satisfied if control measures (for the purpose of limiting PM<sub>10</sub> emissions from the construction activities or normal use and operation associated with the project) contained in the applicable implementation plan are included in the final plans, specifications, and estimates for the project.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1418. Criteria and Procedures: Motor Vehicle Emissions Budget (Transportation Plan)**

- A. The transportation plan shall be consistent with the motor vehicle emissions budget in the applicable implementation plan or implementation plan submission. This criterion applies during the transitional period and the control strategy and maintenance periods, except as provided in R18-2-1436. This criterion may be satisfied if the requirements in subsections (B) and (C) are met:
- B. A regional emissions analysis shall be performed as follows:
  1. The regional analysis shall estimate emissions of any of the following pollutants and pollutant precursors for which the area is in nonattainment or maintenance and for which the applicable implementation plan or implementation plan submission establishes an emissions budget:
    - a. VOC as an ozone precursor.

- b. NO<sub>x</sub> as an ozone precursor, unless the Administrator determines that additional reductions of NO<sub>x</sub> would not contribute to attainment.
  - c. CO.
  - d. PM<sub>10</sub> (and its precursors VOC or NO<sub>x</sub> if the applicable implementation plan or implementation plan submission identifies transportation-related precursor emissions within the nonattainment area as a significant contributor to the PM<sub>10</sub> nonattainment problem or establishes a budget for such emissions).
  - e. NO<sub>x</sub> (in NO<sub>2</sub> nonattainment or maintenance areas).
2. The regional emissions analysis shall estimate emissions from the entire transportation system, including all regionally significant transportation projects contained in the transportation plan and all other regionally significant highway and transit projects expected in the nonattainment or maintenance area in the time-frame of the transportation plan.
  3. The emissions analysis methodology shall meet the requirements of R18-2-1430.
  4. For areas with a transportation plan that meets the content requirements of R18-2-1406(A), the emissions analysis shall be performed for each horizon year. Emissions in milestone years which are between the horizon years may be determined by interpolation.
  5. For areas with a transportation plan that does not meet the content requirements of R18-2-1406(A), the emissions analysis shall be performed for all of the following:
    - a. The last year of the plan's forecast period.
    - b. The attainment year, if the attainment year is in the time span of the transportation plan.
    - c. Any other years in the time span of the transportation plan such that there is not a gap of more than 10 years between analysis years. Emissions in milestone years which are between these analysis years may be determined by interpolation.
- C. The regional emissions analysis shall demonstrate that for each of the applicable pollutants or pollutant precursors in subsection (B)(1) the emissions are less than or equal to the motor vehicle emissions budget as established in the applicable implementation plan or implementation plan submission as follows:
    1. If the applicable implementation plan or implementation plan submission establishes emissions budgets for milestone years, emissions in each milestone year are less than or equal to the motor vehicle emissions budget established for that year.
    2. For nonattainment areas, emissions in the attainment year are less than or equal to the motor vehicle emissions budget established in the applicable implementation plan or implementation plan submission for that year.
    3. For nonattainment areas, emissions in each analysis or horizon year after the attainment year are less than or equal to the motor vehicle emissions budget established by the applicable implementation plan or implementation plan submission for the attainment year. If emissions budgets are established for years after the attainment year, emissions in each analysis year or horizon year shall be less than or equal to the motor vehicle emissions budget for that year, if any, or the motor vehicle emissions budget for the most recent budget year prior to the analysis year or horizon year.
    4. For maintenance areas, emissions in each analysis or horizon year are less than or equal to the motor vehicle

emissions budget established by the maintenance plan for that year, if any, or the emissions budget for the most recent budget year prior to the analysis or horizon year.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1419. Criteria and Procedures: Motor Vehicle Emissions Budget (TIP)**

- A. The TIP shall be consistent with the motor vehicle emissions budgets in the applicable implementation plan or implementation plan submission. This criterion applies during the transitional period and the control strategy and maintenance periods, except as provided in R18-2-1436. This criterion may be satisfied if the requirements in subsections (B) and (C) are met.
- B. For areas with a conforming transportation plan that fully meets the content requirements of R18-2-1406(A), this criterion may be satisfied without additional regional emissions analysis if:
  1. Each program year of the TIP is consistent with the federal funding which may be reasonably expected for that year, and required state or local matching funds and funds for state or local funding-only projects are consistent with the revenue sources expected over the same period; and
  2. The TIP is consistent with the conforming transportation plan such that the regional emissions analysis already performed for the plan applies to the TIP also. This requires a demonstration that:
    - a. The TIP contains all projects which shall be started in the TIP's time-frame in order to achieve the highway and transit system envisioned by the transportation plan in each of its horizon years;
    - b. All TIP projects which are regionally significant are part of the specific highway or transit system envisioned in the transportation plan's horizon years; and
    - c. The design concept and scope of each regionally significant transportation project in the TIP is not significantly different from that described in the transportation plan.
  3. If the requirements in subsections (B)(1) and (B)(2) are not met, then either:
    - a. The TIP may be modified to meet those requirements; or
    - b. The transportation plan shall be revised so that the requirements in subsections (B)(1) and (B)(2) are met. Once the revised plan has been found to conform, this criterion is met for the TIP with no additional analysis except a demonstration that the TIP meets the requirements of subsections (B)(1) and (B)(2).
- C. For areas with a transportation plan that does not meet the content requirements of R18-2-1406(A), a regional emissions analysis shall meet all of the following requirements:
  1. The regional emissions analysis shall estimate emissions from the entire transportation system, including all projects contained in the proposed TIP, the transportation plan, and all other regionally significant highway and transit projects expected in the nonattainment or maintenance area in the time-frame of the transportation plan.
  2. The analysis methodology shall meet the requirements of R18-2-1430(C).
  3. The regional emissions analysis shall satisfy the requirements of R18-2-1418(B)(1), R18-2-1418(B)(5), and R18-2-1418(C).

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1420. Criteria and Procedures: Motor Vehicle Emissions Budget (Project Not from a Plan and TIP)**

- A. The project which is not from a conforming transportation plan and a conforming TIP shall be consistent with the motor vehicle emissions budget in the applicable implementation plan or implementation plan submission. This criterion applies during the transitional period and the control strategy and maintenance periods, except as provided in R18-2-1436. It is satisfied if emissions from the implementation of the project, when considered with the emissions from the projects in the conforming transportation plan and TIP and all other regionally significant transportation projects expected in the area, do not exceed the motor vehicle emissions budget in the applicable implementation plan or implementation plan submission.
- B. For areas with a conforming transportation plan that meets the content requirements of R18-2-1406(A):
  1. This criterion may be satisfied without additional regional analysis if the project is included in the conforming transportation plan, even if it is not specifically included in the latest conforming TIP. This requires a demonstration that all of the following apply:
    - a. Allocating funds to the project will not delay the implementation of projects in the transportation plan or TIP which are necessary to achieve the highway and transit system envisioned by the transportation plan in each of its horizon years.
    - b. The project is not regionally significant or is part of the specific highway or transit system envisioned in the transportation plan's horizon years.
    - c. The design concept and scope of the project is not significantly different from that described in the transportation plan.
  2. If the requirements in subsection (B)(1) are not met, a regional emissions analysis shall be performed as follows:
    - a. The analysis methodology shall meet the requirements of R18-2-1430.
    - b. The analysis shall estimate emissions from the transportation system, including the proposed project and all other regionally significant transportation projects expected in the nonattainment or maintenance area in the time-frame of the transportation plan. The analysis shall include emissions from all previously approved projects which were not from a transportation plan and TIP.
    - c. The regional emissions analysis shall meet the requirements of R18-2-1418(B)(1), R18-2-1418(B)(4) and R18-2-1418(C).
- C. For areas with a transportation plan that does not meet the content requirements of R18-2-1406(A), a regional emissions analysis shall be performed for the project together with the conforming TIP and all other regionally significant transportation projects expected in the nonattainment or maintenance area. This criterion may be satisfied if all of the following apply:
  1. The analysis methodology meets the requirements of R18-2-1430(C).
  2. The analysis estimates emissions from the transportation system, including the proposed project, and all other regionally significant transportation projects expected in the nonattainment or maintenance area in the time-frame of the transportation plan.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

3. The regional emissions analysis satisfies the requirements of R18-2-1418(B)(1), R18-2-1418(B)(5), and R18-2-1418(C).

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1421. Criteria and Procedures: Localized CO Violations (Hot Spots) in the Interim and Transitional Periods**

- A. Each FHWA or FTA project shall eliminate or reduce the severity and number of localized CO violations in the area substantially affected by the project (in CO nonattainment areas). This criterion applies during the interim and transitional periods only. This criterion is satisfied with respect to existing localized CO violations if it is demonstrated that existing localized CO violations will be eliminated or reduced in severity and number as a result of the project.
- B. The demonstration shall be performed according to the requirements of R18-2-1405 and R18-2-1431.
- C. For projects which are not of the type identified by R18-2-1431(A), this criterion may be satisfied if consideration of local factors clearly demonstrates that existing CO violations will be eliminated or reduced in severity and number. Otherwise, a quantitative demonstration shall be performed according to the requirements of R18-2-1431(B).

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1422. Criteria and Procedures: Interim and Transitional Period Reductions in Ozone and CO Areas (Transportation Plan)**

- A. A transportation plan shall contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only, except as otherwise provided in R18-2-1436. It applies to the net effect on emissions of all projects contained in a new or revised transportation plan. This criterion may be satisfied if a regional emissions analysis is performed as described in subsections (B) through (F).
- B. Determine the analysis years for which emissions are to be estimated. Analysis years shall be no more than 10 years apart. The first analysis year shall be no later than the first milestone year (1995 in CO nonattainment areas and 1996 in ozone nonattainment areas). The second analysis year shall be either the attainment year for the area or, if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.
- C. Define the Baseline scenario for each of the analysis years to be the future transportation system that would result from current programs, composed of all of the following, except that projects listed in R18-2-1434 and R18-2-1435 need not be explicitly considered:
  1. All in-place regionally significant highway and transit facilities, services and activities.
  2. All ongoing travel demand management or transportation system management activities.
  3. Completion of all regionally significant transportation projects, regardless of funding source, which are currently under construction or are undergoing right-of-way acquisition (except for hardship acquisition and protective buying); come from the first three years of the previously conforming transportation plan or TIP; or have completed the NEPA process. For the first conformity

determination on the transportation plan after November 24, 1993, a project may not be included in the Baseline scenario and shall be included in the Action scenario as described in subsection (D), if one of the following major steps has not occurred within the most recent three-year period:

- a. NEPA process completion;
  - b. Start of final design;
  - c. Acquisition of a significant portion of the right-of-way;
  - d. Approval of the plans, specifications and estimates.
- D. Define the Action scenario for each of the analysis years as the transportation system that will result in that year from the implementation of the proposed transportation plan, TIPs adopted under it, and other expected regionally significant transportation projects in the nonattainment area. The Action scenario will include all of the following except that projects listed in R18-2-1434 and R18-2-1435 need not be explicitly considered:
    1. All facilities, services, and activities in the Baseline scenario;
    2. Completion of all TCMs and regionally significant transportation projects, including facilities, services, and activities, specifically identified in the proposed transportation plan which will be operational or in effect in the analysis year, except that regulatory TCMs may not be assumed to begin at a future time unless the regulation is already adopted by the enforcing jurisdiction or the TCM is identified in the applicable implementation plan;
    3. All travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any federal funding or approval, which have been fully adopted or funded by the enforcing jurisdiction or sponsoring agency since the last conformity determination on the transportation plan;
    4. The incremental effects of any travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any federal funding or approval, which were adopted or funded prior to the date of the last conformity determination on the transportation plan, but which have been modified since then to be more stringent or effective;
    5. Completion of all expected regionally significant highway and transit projects which are not from a conforming transportation plan and TIP;
    6. Completion of all expected regionally significant non-FHWA/FTA highway and transit projects that have clear funding sources and commitments leading toward their implementation and completion by the analysis year.
  - E. Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the Baseline and Action scenarios and determine the difference in regional VOC and NO<sub>x</sub> emissions (unless the Administrator determines that additional reductions of NO<sub>x</sub> would not contribute to attainment) between the two scenarios for ozone nonattainment areas and the difference in CO emissions between the two scenarios for CO nonattainment areas. The analysis shall be performed for each of the analysis years according to the requirements of R18-2-1430. Emissions in milestone years which are between the analysis years may be determined by interpolation.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- F. This criterion is met if the regional VOC and NO<sub>x</sub> emissions (for ozone nonattainment areas) and CO emissions (for CO nonattainment areas) predicted in the Action scenario are less than the emissions predicted from the Baseline scenario in each analysis year, and if this can reasonably be expected to be true in the periods between the first milestone year and the analysis years. The regional analysis shall show that the Action scenario contributes to a reduction in emissions from the 1990 emissions by any nonzero amount.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1423. Criteria and Procedures: Interim Period Reductions in Ozone and CO Areas (TIP)**

- A. A TIP shall contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only, except as otherwise provided in R18-2-1436. It applies to the net effect on emissions of all projects contained in a new or revised TIP. This criterion may be satisfied if a regional emissions analysis is performed as described in subsections (B) through (F).
- B. Determine the analysis years for which emissions are to be estimated. The first analysis year shall be no later than the first milestone year (1995 in CO nonattainment areas and 1996 in ozone nonattainment areas). The analysis years shall be no more than 10 years apart. The second analysis year shall be either the attainment year for the area or, if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.
- C. Define the Baseline scenario as the future transportation system that would result from current programs, composed of all of the following, except that projects listed in R18-2-1434 and R18-2-1435 need not be explicitly considered:
1. All in-place regionally significant highway and transit facilities, services, and activities.
  2. All ongoing travel demand management or transportation system management activities.
  3. Completion of all regionally significant transportation projects, regardless of funding source, which are currently under construction or are undergoing right-of-way acquisition, except for hardship acquisition and protective buying; come from the first three years of the previously conforming TIP; or have completed the NEPA process. For the first conformity determination on the TIP after November 24, 1993, a project may not be included in the Baseline scenario if one of the following major steps has not occurred within the most recent three-year period:
    - a. NEPA process completion.
    - b. Start of final design.
    - c. Acquisition of a significant portion of the right-of-way.
    - d. Approval of the plans, specifications, and estimates. Such a project shall be included in the Action scenario, as described in subsection (D).
- D. Define the Action scenario as the future transportation system that will result from the implementation of the proposed TIP and other expected regionally significant transportation projects in the nonattainment area in the time-frame of the transportation plan. It will include all of the following, except that projects listed in R18-2-1434 and R18-2-1435 need not be explicitly considered:
1. All facilities, services, and activities in the Baseline scenario;
  2. Completion of all TCMs and regionally significant transportation projects, including facilities, services, and activities, included in the proposed TIP, except that regulatory TCMs may not be assumed to begin at a future time unless the regulation is already adopted by the enforcing jurisdiction or the TCM is contained in the applicable implementation plan;
  3. All travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any federal funding or approval, which have been fully adopted or funded by the enforcing jurisdiction or sponsoring agency since the last conformity determination on the TIP;
  4. The incremental effects of any travel demand management programs and transportation system management activities known to the MPO, but not included in the applicable implementation plan or utilizing any federal funding or approval, which were adopted or funded prior to the date of the last conformity determination on the TIP, but which have been modified since then to be more stringent or effective;
  5. Completion of all expected regionally significant highway and transit projects which are not from a conforming transportation plan and TIP;
  6. Completion of all expected regionally significant non-FHWA/FTA highway and transit projects that have clear funding sources and commitments leading toward their implementation and completion by the analysis year.
- E. Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the Baseline and Action scenarios, and determine the difference in regional VOC and NO<sub>x</sub> emissions (unless the Administrator determines that additional reductions of NO<sub>x</sub> would not contribute to attainment) between the two scenarios for ozone nonattainment areas and the difference in CO emissions between the two scenarios for CO nonattainment areas. The analysis shall be performed for each of the analysis years according to the requirements of R18-2-1430. Emissions in milestone years which are between analysis years may be determined by interpolation.
- F. This criterion is met if the regional VOC and NO<sub>x</sub> emissions in ozone nonattainment areas and CO emissions in CO nonattainment areas predicted in the Action scenario are less than the emissions predicted from the Baseline scenario in each analysis year, and if this can reasonably be expected to be true in the period between the analysis years. The regional analysis shall show that the Action scenario contributes to a reduction in emissions from the 1990 emissions by any nonzero amount.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1424. Criteria and Procedures: Interim Period Reductions for Ozone and CO Areas (Project Not from a Plan and TIP)**

A transportation project shall contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only, except as otherwise provided in R18-2-1436. This criterion is satisfied if a regional emissions analysis is performed which meets the requirements of R18-2-1422 and which includes the transportation plan and project in the Action scenario. If the project which is not from a conforming

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

transportation plan and TIP is a modification of a project currently in the plan or TIP, the Baseline scenario shall include the project with its original design concept and scope, and the Action scenario shall include the project with its new design concept and scope.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1425. Criteria and Procedures: Interim Period Reductions for PM<sub>10</sub> and NO<sub>2</sub> Areas (Transportation Plan)**

- A. A transportation plan shall contribute to emission reductions or shall not increase emissions in PM<sub>10</sub> and NO<sub>2</sub> nonattainment areas. This criterion applies only during the interim and transitional periods. It applies to the net effect on emissions of all projects contained in a new or revised transportation plan. This criterion may be satisfied if the requirements of either subsections (B) or (C) are met.
- B. Demonstrate that implementation of the plan and all other regionally significant transportation projects expected in the nonattainment area will contribute to reductions in emissions of PM<sub>10</sub> in a PM<sub>10</sub> nonattainment area, and of each transportation-related precursor of PM<sub>10</sub> in PM<sub>10</sub> nonattainment areas if the EPA Regional Administrator or the Director of ADEQ has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM<sub>10</sub> nonattainment problem and has so notified the MPO and USDOT, and of NO<sub>x</sub> in an NO<sub>2</sub> nonattainment area, by performing a regional emissions analysis as follows:
  1. Determine the analysis years for which emissions are to be estimated. Analysis years shall be no more than 10 years apart. The first analysis year shall be no later than 1996 (for NO<sub>2</sub> areas) or four years and six months following the date of designation (for PM<sub>10</sub> areas). The second analysis year shall be either the attainment year for the area or, if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.
  2. Define for each of the analysis years the Baseline scenario, as defined in R18-2-1422(C), and the Action scenario, as defined in R18-2-1422(D).
  3. Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the Baseline and Action scenarios and determine the difference between the two scenarios in regional PM<sub>10</sub> emissions in a PM<sub>10</sub> nonattainment area (and transportation-related precursors of PM<sub>10</sub> in PM<sub>10</sub> nonattainment areas if the EPA Regional Administrator or the Director of ADEQ has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM<sub>10</sub> nonattainment problem and has so notified ADOT, the MPO where one exists and USDOT) and in NO<sub>x</sub> emissions in an NO<sub>2</sub> nonattainment area. The analysis shall be performed for each of the analysis years according to the requirements of R18-2-1430. The analysis shall address the periods between the analysis years and the periods between 1990, the first milestone year if any, and the first of the analysis years. Emissions in milestone years which are between the analysis years may be determined by interpolation.
  4. Demonstrate that the regional PM<sub>10</sub> emissions and PM<sub>10</sub> precursor emissions, where applicable, (for PM<sub>10</sub> nonattainment areas) and NO<sub>x</sub> emissions (for NO<sub>2</sub> nonattainment areas) predicted in the Action scenario are less than

the emissions predicted from the Baseline scenario in each analysis year, and that this can reasonably be expected to be true in the periods between the first milestone year (if any) and the analysis years.

- C. Demonstrate that when the projects in the transportation plan and all other regionally significant transportation projects expected in the nonattainment area are implemented, the transportation system's total highway and transit emissions of PM<sub>10</sub> in a PM<sub>10</sub> nonattainment area (and transportation-related precursors of PM<sub>10</sub> in PM<sub>10</sub> nonattainment areas if the EPA Regional Administrator or the Director of ADEQ has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM<sub>10</sub> nonattainment problem and has so notified the MPO and USDOT) and of NO<sub>x</sub> in an NO<sub>2</sub> nonattainment area will not be greater than baseline levels, by performing a regional emissions analysis as follows:
  1. Determine the baseline regional emissions of PM<sub>10</sub> and PM<sub>10</sub> precursors, where applicable (for PM<sub>10</sub> nonattainment areas) and NO<sub>x</sub> (for NO<sub>2</sub> nonattainment areas) from highway and transit sources. Baseline emissions are those estimated to have occurred during calendar year 1990, unless the control strategy implementation plan for that area includes a baseline emissions inventory for a different year.
  2. Estimate the emissions of the applicable pollutant or pollutants from the entire transportation system, including projects in the transportation plan and TIP and all other regionally significant transportation projects in the nonattainment area, according to the requirements of R18-2-1430. Emissions shall be estimated for analysis years which are no more than 10 years apart. The first analysis year shall be no later than 1996 (for NO<sub>2</sub> areas) or four years and six months following the date of designation (for PM<sub>10</sub> areas). The second analysis year shall be either the attainment year for the area or, if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.
  3. Demonstrate that for each analysis year the emissions estimated in subsection (C)(2) are no greater than baseline emissions of PM<sub>10</sub> and PM<sub>10</sub> precursors, where applicable (for PM<sub>10</sub> nonattainment areas) or NO<sub>x</sub> (for NO<sub>2</sub> nonattainment areas) from highway and transit sources.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1426. Criteria and Procedures: Interim Period Reductions for PM<sub>10</sub> and NO<sub>2</sub> Areas (TIP)**

- A. A TIP shall contribute to emission reductions or shall not increase emissions in PM<sub>10</sub> and NO<sub>2</sub> nonattainment areas. This criterion applies only during the interim and transitional periods. It applies to the net effect on emissions of all projects contained in a new or revised TIP. This criterion may be satisfied if the requirements of either subsection (B) or subsection (C) are met.
- B. Demonstrate that implementation of the plan and TIP and all other regionally significant transportation projects expected in the nonattainment area will contribute to reductions in emissions of PM<sub>10</sub> in a PM<sub>10</sub> nonattainment area (and transportation-related precursors of PM<sub>10</sub> in PM<sub>10</sub> nonattainment areas if the EPA Regional Administrator or the Director of ADEQ has

made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM<sub>10</sub> nonattainment problem and has so notified the MPO and USDOT) and of NO<sub>x</sub> in an NO<sub>2</sub> nonattainment area, by performing a regional emissions analysis as follows:

1. Determine the analysis years for which emissions are to be estimated, according to the requirements of R18-2-1425(B)(1).
  2. Define for each of the analysis years the Baseline scenario, as defined in R18-2-1423(C), and the Action scenario, as defined in R18-2-1423(D).
  3. Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the Baseline and Action scenarios as required by R18-2-1425(B)(3), and make the demonstration required by R18-2-1425(B)(4).
- C. Demonstrate that when the projects in the transportation plan and TIP and all other regionally significant transportation projects expected in the area are implemented, the transportation system's total highway and transit emissions of PM<sub>10</sub> in a PM<sub>10</sub> nonattainment area (and transportation-related precursors of PM<sub>10</sub> in PM<sub>10</sub> nonattainment areas if the EPA Regional Administrator or the Director of ADEQ has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM<sub>10</sub> nonattainment problem and has so notified the MPO and USDOT) and of NO<sub>x</sub> in an NO<sub>2</sub> nonattainment area will not be greater than baseline levels, by performing a regional emissions analysis as required by R18-2-1425(C).

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1427. Criteria and Procedures: Interim Period Reductions for PM<sub>10</sub> and NO<sub>2</sub> Areas (Project Not from a Plan and TIP)**

A transportation project which is not from a conforming transportation plan and TIP shall contribute to emission reductions or shall not increase emissions in PM<sub>10</sub> and NO<sub>2</sub> nonattainment areas. This criterion applies during the interim and transitional periods only. This criterion is met if a regional emissions analysis is performed which meets the requirements of R18-2-1425 and which includes the transportation plan and project in the Action scenario. If the project which is not from a conforming transportation plan and TIP is a modification of a project currently in the transportation plan or TIP, and R18-2-1425(B) is used to demonstrate satisfaction of this criterion, the Baseline scenario shall include the project with its original design concept and scope, and the Action scenario shall include the project with its new design concept and scope.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1428. Transition from the Interim Period to the Control Strategy Period**

- A. For areas which submit a control strategy implementation plan revision after November 24, 1993:
1. The transportation plan and TIP shall be demonstrated to conform according to transitional period criteria and procedures by one year from the date the CAA requires submission of such control strategy implementation plan revision. Otherwise, the conformity status of the transportation plan and TIP will lapse, and no new project-level conformity determinations may be made.
    - a. The conformity of new transportation plans and TIPs may be demonstrated according to Phase II

interim period criteria and procedures for 90 days following submission of the control strategy implementation plan revision, provided the conformity of such transportation plans and TIPs is redetermined according to transitional period criteria and procedures as required in subsection (A)(1) and such transportation plans and TIPs are consistent with the motor vehicle emissions budget in the applicable implementation plan or any previously submitted control strategy implementation plan revision.

- b. Beginning 90 days after submission of the control strategy implementation plan revision, new transportation plans and TIPs shall demonstrate conformity according to transitional period criteria and procedures.
  2. If EPA disapproves the submitted control strategy implementation plan revision and so notifies the state, the MPO where one exists, and USDOT, which initiates the sanction process under CAA §§ 179 or 110(m), the conformity status of the transportation plan and TIP shall lapse 120 days after EPA's disapproval, and no new project-level conformity determinations may be made. No new transportation plan, TIP, or project may be found to conform until another control strategy implementation plan revision is submitted and conformity is demonstrated according to transitional period criteria and procedures.
  3. Notwithstanding subsection (A)(2), if EPA disapproves the submitted control strategy implementation plan revision but determines that the control strategy contained in the revision would have been considered approvable with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by CAA § 110(a)(2)(A), the provisions of subsection (A)(1) shall apply for 12 months following the date of disapproval. The conformity status of the transportation plan and TIP shall lapse 12 months following the date of disapproval unless another control strategy implementation plan revision is submitted to EPA and found to be complete.
- B. For areas which have not submitted a control strategy implementation plan revision:
1. For areas whose CAA deadline for submission of the control strategy implementation plan revision is after November 24, 1993, and EPA has notified the state, the MPO where one exists, and USDOT of the state's failure to submit a control strategy implementation plan revision, which initiates the sanction process under CAA §§ 179 or 110(m) all of the following shall apply:
    - a. No new transportation plans or TIPs may be found to conform beginning 120 days after the CAA deadline.
    - b. The conformity status of the transportation plan and TIP shall lapse one year after the CAA deadline, and no new project-level conformity determinations may be made.
  2. For areas whose CAA deadline for submission of the control strategy implementation plan was before November 24, 1993, and EPA has made a finding of failure to submit a control strategy implementation plan revision, which initiates the sanction process under CAA §§ 179 or 110(m), all of the following apply unless the failure has been remedied and acknowledged by a letter from the EPA Regional Administrator:

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- a. No new transportation plans or TIPs may be found to conform beginning March 24, 1994.
  - b. The conformity status of the transportation plan and TIP shall lapse November 25, 1994, and no new project-level conformity determinations may be made.
- C. For areas which have not submitted a complete control strategy implementation plan revision:
- 1. For areas where EPA notifies the state, the MPO where one exists, and USDOT after November 24, 1993, that the control strategy implementation plan revision submitted by the state is incomplete, which initiates the sanction process under CAA §§ 179 or 110(m), all of the following apply unless the failure has been remedied and acknowledged by a letter from the EPA Regional Administrator:
    - a. No new transportation plans or TIPs may be found to conform beginning 120 days after EPA's incompleteness finding.
    - b. The conformity status of the transportation plan and TIP shall lapse one year after the CAA deadline, and no new project-level conformity determinations may be made.
    - c. Notwithstanding subsections (C)(1)(a) and (b), if EPA notes in its incompleteness finding that the submittal would have been considered complete with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by CAA § 110(a)(2)(A), the provisions of subsection (A)(1) shall apply for a period of 12 months following the date of the incompleteness determination. The conformity status of the transportation plan and TIP shall lapse 12 months following the date of the incompleteness determination unless another control strategy implementation plan revision is submitted to EPA and found to be complete.
  - 2. For areas where EPA has determined before November 24, 1993, that the control strategy implementation plan revision is incomplete, which initiates the sanction process under CAA §§ 179 or 110(m), all of the following apply unless the failure has been remedied and acknowledged by a letter from the EPA Regional Administrator:
    - a. No new transportation plans or TIPs may be found to conform beginning March 24, 1994.
    - b. The conformity status of the transportation plan and TIP shall lapse November 25, 1994, and no new project-level conformity determinations may be made.
    - c. Notwithstanding subsections (C)(2)(a) and (b), if EPA notes in its incompleteness finding that the submittal would have been considered complete with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by CAA § 110(a)(2)(A), the provisions of subsection (D)(1) shall apply for a period of 12 months following the date of the incompleteness determination. The conformity status of the transportation plan and TIP shall lapse 12 months following the date of the incompleteness determination unless another control strategy implementation plan revision is submitted to EPA and found to be complete.
- D. For areas which submitted a control strategy implementation plan before November 24, 1993:
- 1. The transportation plan and TIP shall have been demonstrated to conform according to transitional period criteria and procedures by November 25, 1994. Otherwise, their conformity status will lapse, and no new project-level conformity determinations may be made. From and after February 22, 1994, new transportation plans and TIPs shall demonstrate conformity according to transitional period criteria and procedures.
  - 2. If EPA has disapproved the most recent control strategy implementation plan submission, the conformity status of the transportation plan and TIP shall lapse March 24, 1994, and no new project-level conformity determinations may be made. No new transportation plans, TIPs, or projects may be found to conform until another control strategy implementation plan revision is submitted and conformity is demonstrated according to transitional period criteria and procedures.
  - 3. Notwithstanding subsection (D)(2), if EPA has disapproved the submitted control strategy implementation plan revision but determines that the control strategy contained in the revision would have been considered approvable with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by CAA § 110(a)(2)(A), the provisions of subsection (D)(1) shall apply until November 25, 1994. The conformity status of the transportation plan and TIP shall lapse November 25, 1994, unless another control strategy implementation plan revision is submitted to EPA and found to be complete.
- E. If the currently conforming transportation plan and TIP have not been demonstrated to conform according to transitional period criteria and procedures, the requirements of subsections (E)(1) and (2) shall be met.
- 1. Before a FHWA or FTA project which is regionally significant and increases single-occupant vehicle capacity (a new general purpose highway on a new location or adding general purpose lanes) may be found to conform, ADEQ shall be consulted on how the emissions which the existing transportation plan and TIP's conformity determination estimates for the Action scenario, as required by R18-2-1422 through R18-2-1427, compare to the motor vehicle emissions budget in the implementation plan submission or the projected motor vehicle emissions budget in the implementation plan under development.
  - 2. In the event of unresolved disputes on such project-level conformity determinations, ADEQ may escalate the issue to the governor consistent with the procedure in R18-2-1405, which applies for ADEQ comments on a conformity determination.
- F. Redetermination of conformity of the existing transportation plan and TIP according to the transitional period criteria and procedures:
- 1. The redetermination of the conformity of the existing transportation plan and TIP according to transitional period criteria and procedures (as required by subsections (A)(1) and (D)(1)) does not require new emissions analysis and does not have to satisfy the requirements of R18-2-1410 and R18-2-1411 if all of the following are met:
    - a. The control strategy implementation plan revision submitted to EPA uses the MPO's modeling of the existing transportation plan and TIP for its projections of motor vehicle emissions.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- b. The control strategy implementation plan does not include any transportation projects which are not included in the transportation plan and TIP.
2. A redetermination of conformity as described in subsection (F)(1) is not considered a conformity determination for the purposes of R18-2-1404(E) or R18-2-1404(I) regarding the maximum intervals between conformity determinations. Conformity shall be determined according to all the applicable criteria and procedures of R18-2-1409 within three years of the last determination which did not rely on subsection (F)(1).
- G. Ozone nonattainment areas:**
1. The requirements of subsection (B)(1) apply if a serious or above ozone nonattainment area has not submitted the implementation plan revisions which CAA §§ 182(c)(2)(A) and 182(c)(2)(B) require to be submitted to EPA November 15, 1994, even if the area has submitted the implementation plan revision which CAA § 182(b)(1) requires to be submitted to EPA November 15, 1993.
  2. The requirements of subsection (B)(1) apply if a moderate ozone nonattainment area which is using photochemical dispersion modeling to demonstrate the "specific annual reductions as necessary to attain" required by CAA § 182(b)(1), and which has permission from EPA to delay submission of such demonstration until November 15, 1994, does not submit such demonstration by that date. The requirements of subsection (B)(1) apply in this case even if the area has submitted the 15% emission reduction demonstration required by CAA § 182(b)(1).
  3. The requirements of subsection (A) apply when the implementation plan revisions required by CAA §§ 182(c)(2)(A) and 182(c)(2)(B) are submitted.
- H. Nonattainment areas which are not required to demonstrate reasonable further progress and attainment.** If an area listed in R18-2-1436 submits a control strategy implementation plan revision, the requirements of subsections (A) and (E) apply. Because the areas listed in R18-2-1436 are not required to demonstrate reasonable further progress and attainment and therefore have no CAA deadline, the provisions of subsection (B) do not apply to these areas at any time.
- I. If a control strategy implementation plan revision is not submitted to EPA but a maintenance plan required by CAA § 175A is submitted to EPA, the requirements of subsection (A) or (D) apply, with the maintenance plan submission treated as a "control strategy implementation plan revision" for the purposes of those requirements.**
- J. This Section does not become effective until June 1, 1996.**
- Historical Note**  
Adopted effective June 15, 1995 (Supp. 95-2).
- R18-2-1429. Requirements for Adoption or Approval of Projects by Recipients of Funds Designated under 23 U.S.C. or the Federal Transit Act**
- A.** This Section shall not apply to any of the following:
1. A transportation project that is a street with a lower classification than a collector street, as specified in the most recent federal classification map for the region.
  2. An exempt project listed in R18-2-1434.
- B.** No recipient of federal funds designated under 23 U.S.C. or the Federal Transit Act shall adopt or approve a transportation project, regardless of funding source, without first determining whether the transportation project is regionally significant. In making this determination, the recipient shall not take any action that is inconsistent with the procedures developed by ADOT or the MPO pursuant to R18-2-1405(R).
- C.** No recipient of federal funds designated under 23 U.S.C. or the Federal Transit Act shall adopt or approve a regionally significant highway or transit project, regardless of funding source, unless both of the following apply:
1. There is a currently conforming transportation plan and TIP consistent with the requirements of R18-2-1414.
  2. The requirements of one of the following are met:
    - a. The project comes from a conforming plan and program consistent with the requirements of R18-2-1415.
    - b. The project is included in the regional emissions analysis supporting the currently conforming TIP's conformity determination, even if the project is not strictly "included" in the TIP for the purposes of MPO project selection or endorsement, and the project's design concept and scope have not changed significantly from those which were included in the regional emissions analysis, or in a manner which would significantly impact use of the facility.
    - c. During the control strategy or maintenance period, the project is consistent with the motor vehicle emissions budget in the applicable implementation plan consistent with the requirements of R18-2-1420.
    - d. During Phase II of the interim period, the project contributes to emissions reductions or does not increase emissions consistent with the requirements of R18-2-1424 (in ozone and CO nonattainment areas) or R18-2-1427 (in PM<sub>10</sub> and NO<sub>2</sub> nonattainment areas).
    - e. During the transitional period, the project satisfies the requirements of both subsections (1)(2)(c) and (d).
- D.** Pursuant to the consultation process established in R18-2-1405(O), ADOT or the MPO where one exists shall, not later than September 1, 1995, develop and make available the procedures to be used by any recipient of federal funds designated under 23 U.S.C. or the Federal Transit Act to comply with subsections (B) and (C). These procedures may be revised periodically, as needed, using the same consultation process. At a minimum, such procedures shall provide for the following:
1. The minimum information required by the recipient to make determinations in compliance with subsections (B) and (C);
  2. The time-frames for action to be taken by the recipient;
  3. For transportation projects determined to be regionally significant, the documentation necessary to demonstrate that the requirements of 23 CFR 450.324(e), (g), and (h) have been met.
- E.** After a transportation project is adopted or approved, no subsequent act defined as adoption or approval under this Section or under procedures developed to implement this Section shall be subject to subsection (B) or (C), unless project's design concept or scope have changed significantly since the project was first adopted or approved.
- F.** A regionally significant transportation project found to be in conformity, either as a result of a TIP or a separate project analysis, shall retain such conformity finding, irrespective of subsequent analysis, unless the project fails to meet the conditions of its approval or undergoes a significant change in scope. In any event, a conformity determination shall lapse after three years in the absence of a redetermination; except that a project undergoing NEPA approval shall retain its con-

formity determination, unless none of the following major steps has occurred within the most recent three-year period:

1. NEPA process completion;
2. Start of final design;
3. Acquisition of a significant portion of the right-of-way;
4. Approval of the plans, specifications, and estimates.

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1430. Procedures for Determining Regional Transportation-related Emissions**

A. The following are general requirements for determining regional transportation-related emissions:

1. The regional emissions analysis for the transportation plan, TIP, or project not from a conforming plan and TIP shall include all regionally significant transportation projects expected in the nonattainment or maintenance area, including FHWA or FTA projects proposed in the transportation plan and TIP and all other regionally significant transportation projects which are disclosed to ADOT or the MPO as required by R18-2-1405. Projects which are not regionally significant are not required to be explicitly modeled, but VMT from such projects shall be estimated in accordance with reasonable professional practice. The effects of TCMs and similar projects that are not regionally significant may also be estimated in accordance with reasonable professional practice.
2. The emissions analysis may not include for emissions reduction credit any TCMs which have been delayed beyond the scheduled date until such time as implementation has been assured. If the TCM has been partially implemented and it can be demonstrated that it is providing quantifiable emission reduction benefits, the emissions analysis may include that emissions reduction credit.
3. Emissions reduction credit from projects, programs, or activities which require a regulation in order to be implemented may not be included in the emissions analysis unless the regulation is already adopted by the enforcing jurisdiction. Adopted regulations are required for demand management strategies for reducing emissions which are not specifically identified in the applicable implementation plan, and for control programs which are external to the transportation system itself, such as tailpipe or evaporative emission standards, limits on gasoline volatility, inspection and maintenance programs, and oxygenated or reformulated gasoline or diesel fuel. A regulatory program may also be considered to be adopted if an opt-in to a federally enforced program has been approved by EPA, if EPA has promulgated the program (if the control program is a federal responsibility, such as tailpipe standards), or if the CAA requires the program without need for individual state action and without any discretionary authority for EPA to set its stringency, delay its effective date, or not implement the program.
4. Notwithstanding subsection (A)(3), during the transitional period, control measures or programs which are committed to in an implementation plan submission as described in R18-2-1418 through R18-2-1420, but which has not received final EPA action in the form of a finding of incompleteness, approval, or disapproval, may be assumed for emission reduction credit for the purpose of demonstrating that the requirements of R18-2-1418 through R18-2-1420 are satisfied.

5. A regional emissions analysis for the purpose of satisfying the requirements of R18-2-1422 through R18-2-1424 may account for the programs in subsection (A)(4), but the same assumptions about these programs shall be used for both the Baseline and Action scenarios.

6. Ambient temperatures shall be consistent with those used to establish the emissions budget in the applicable implementation plan. Factors other than temperatures, for example the fraction of travel in a hot stabilized engine mode, may be modified after interagency consultation according to R18-2-1405 if the newer estimates incorporate additional or more geographically specific information or represent a logically estimated trend in such factors beyond the period considered in the applicable implementation plan.

B. For serious, severe, and extreme ozone nonattainment areas and serious carbon monoxide areas after January 1, 1995, estimates of regional transportation-related emissions used to support conformity determinations shall be made according to procedures which meet the requirements in subsections (B)(1) through (5).

1. A network-based transportation demand model or models relating travel demand and transportation system performance to land-use patterns, population demographics, employment, transportation infrastructure, and transportation policies shall be used to estimate travel within the metropolitan planning area of the nonattainment area. Such a model shall possess all of the following attributes:
  - a. The modeling methods and the functional relationships used in the model shall in all respects be in accordance with acceptable professional practice and reasonable for purposes of emission estimation.
  - b. The network-based model shall be validated against ground counts for a base year that is not more than 10 years prior to the date of the conformity determination. Land use, population, and other inputs shall be based on the best available information and appropriate to the validation base year.
  - c. For peak-hour or peak-period traffic assignments, a capacity sensitive assignment methodology shall be used.
  - d. Zone-to-zone travel times used to distribute trips between origin and destination pairs shall be in reasonable agreement with the travel times which result from the process of assignment of trips to network links. Where use of transit currently is anticipated to be a significant factor in satisfying transportation demand, these times should also be used for modeling mode splits.
  - e. Free-flow speeds on network links shall be based on empirical observations.
  - f. Peak and off-peak travel demand and travel times shall be provided.
  - g. Trip distribution and mode choice shall be sensitive to pricing, where pricing is a significant factor, if the network model is capable of such determinations and the necessary information is available.
  - h. The model shall utilize and document a logical correspondence between the assumed scenario of land development and use and the future transportation system for which emissions are being estimated. Reliance on a formal land-use model is not specifically required but is encouraged.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- i. A dependence of trip generation on the accessibility of destinations via the transportation system, including pricing, is strongly encouraged but not specifically required, unless the network model is capable of such determinations and the necessary information is available.
  - j. A dependence of regional economic and population growth on the accessibility of destinations via the transportation system is strongly encouraged but not specifically required, unless the network model is capable of such determinations and the necessary information is available.
  - k. Consideration of emissions increases from construction-related congestion is not specifically required.
2. Highway Performance Monitoring System (HPMS) estimates of vehicle miles traveled shall be considered the primary measure of vehicle miles traveled within the portion of the nonattainment or maintenance area and for the functional classes of roadways included in HPMS, for urban areas which are sampled on a separate urban area basis. A factor or factors shall be developed to reconcile and calibrate the network-based model estimates of vehicle miles traveled in the base year of its validation to the HPMS estimates for the same period, and these factors shall be applied to model estimates of future vehicle miles traveled. In this factoring process, consideration will be given to differences in the facility coverage of the HPMS and the modeled network description. Departure from these procedures is permitted with the concurrence of USDOT and EPA.
  3. Reasonable methods shall be used to estimate nonattainment area vehicle travel on off-network roadways within the urban transportation planning area and on roadways outside the urban transportation planning area.
  4. Reasonable methods in accordance with good practice shall be used to estimate traffic speeds and delays in a manner that is sensitive to the estimated volume of travel on each roadway segment represented in the network model.
- C. For areas which are not serious, severe, or extreme ozone nonattainment areas or serious carbon monoxide areas, or before January 1, 1995:
1. Procedures which satisfy some or all of the requirements of subsection (A) shall be used in all areas not subject to subsection (A) in which those procedures have been the previous practice of the MPO.
  2. Regional emissions may be estimated by methods which do not explicitly or comprehensively account for the influence of land use and transportation infrastructure on vehicle miles traveled and traffic speeds and congestion. Such methods shall account for VMT growth by extrapolating historical VMT or projecting future VMT by considering growth in population and historical growth trends for vehicle miles travelled per person. These methods shall also consider future economic activity, transit alternatives, and transportation system policies.
- D. This subsection applies to any nonattainment or maintenance area or any portion thereof which does not have a metropolitan transportation plan or TIP and whose projects are not part of the emissions analysis of any MPO's metropolitan transportation plan or TIP (because the nonattainment or maintenance area or portion thereof does not contain a metropolitan planning area or portion of a metropolitan planning area and is not part of a Metropolitan Statistical Area or Consolidated Metropolitan Statistical Area which is or contains a nonattainment or maintenance area).
1. Conformity demonstrations for projects in these areas may satisfy the requirements of R18-2-1420, R18-2-1424, and R18-2-1427 with one regional emissions analysis which includes all the regionally significant transportation projects in the nonattainment or maintenance area or portion thereof.
  2. The requirements of R18-2-1420 shall be satisfied according to the procedures in R18-2-1420(C), with references to the "transportation plan" taken to mean the statewide transportation plan.
  3. The requirements of R18-2-1424 and R18-2-1427 which reference "transportation plan" or "TIP" shall be taken to mean those projects in the statewide transportation plan or statewide TIP which are in the nonattainment or maintenance area or portion thereof.
  4. The requirement of R18-2-1429(A)(2) shall be satisfied if all of the following are met:
    - a. The project is included in the regional emissions analysis which includes all regionally significant highway and transportation projects in the nonattainment or maintenance area or portion thereof and supports the most recent conformity determination made according to the requirements of R18-2-1420, R18-2-1424 or R18-2-1427 (as modified by subsections (D)(2) and (D)(3)), as appropriate for the time period and pollutant.
    - b. The project's design concept and scope have not changed significantly from those which were included in the regional emissions analysis or in a manner which would significantly impact use of the facility.
- E. For areas in which the implementation plan does not identify construction-related fugitive PM<sub>10</sub> as a contributor to the nonattainment problem, the fugitive PM<sub>10</sub> emissions associated with highway and transit project construction are not required to be considered in the regional emissions analysis.
- F. In PM<sub>10</sub> nonattainment and maintenance areas with implementation plans which identify construction-related fugitive PM<sub>10</sub> as a contributor to the nonattainment problem, the regional PM<sub>10</sub> emissions analysis shall consider construction-related fugitive PM<sub>10</sub> and shall account for the level of construction activity, the fugitive PM<sub>10</sub> control measures in the applicable implementation plan, and the dust-producing capacity of the proposed activities.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1431. Procedures for Determining Localized CO and PM<sub>10</sub> Concentrations (Hot-spot Analysis)**

- A. In the following cases, CO hot-spot analyses shall be based on the applicable air quality models, data bases, and other requirements specified in 40 CFR 51 Appendix W ("Guideline on Air Quality Models (Revised)" (1988), supplement (A) (1987) and supplement (B) (1993), EPA publication no. 450/2-78-027R, incorporated by reference and on file with the Department and with the Secretary of State), unless, after the interagency consultation process described in R18-2-1405 and with the approval of the EPA Regional Administrator, these models, data bases, and other requirements are determined to be inappropriate:
1. For projects in or affecting locations, areas, or categories of sites which are identified in the applicable implemen-

tation plan as sites of current violation or possible current violation;

2. For those intersections at Level-of-Service D, E, or F, or those that will change to Level-of-Service D, E, or F because of increased traffic volumes related to a new project in the vicinity;
  3. For any project involving or affecting any of the intersections which the applicable implementation plan identifies as the top three intersections in the nonattainment or maintenance area based on the highest traffic volumes;
  4. For any project involving or affecting any of the intersections which the applicable implementation plan identifies as the top three intersections in the nonattainment or maintenance area based on the worst Level-of-Service;
  5. Where use of the "Guideline" models is practicable and reasonable given the potential for violations.
- B.** In cases other than those described in subsection (A), other quantitative methods may be used if they represent reasonable and common professional practice.
- C.** CO hot-spot analyses shall include the entire project and may be performed only after the major design features which will significantly impact CO concentrations have been identified. The background concentration may be estimated using the ratio of future to current traffic multiplied by the ratio of future to current emission factors.
- D.** PM<sub>10</sub> hot-spot analysis shall be performed for projects which are located at sites at which violations have been verified by monitoring, and at sites which have essentially identical vehicle and roadway emission and dispersion characteristics (including sites near one at which a violation has been monitored). The projects which require PM<sub>10</sub> hot-spot analysis shall be determined through the interagency consultation process required in R18-2-1405. In PM<sub>10</sub> nonattainment and maintenance areas, new or expanded bus and rail terminals and transfer points which increase the number of diesel vehicles congregating at a single location require hot-spot analysis. USDOT may choose to make a categorical conformity determination on bus and rail terminals or transfer points based on appropriate modeling of various terminal sizes, configurations, and activity levels. The requirements of this subsection for quantitative hot-spot analysis will not take effect until EPA releases modeling guidance on this subject and announces in the Federal Register that these requirements are in effect.
- E.** Hot-spot analysis assumptions shall be consistent with those in the regional emissions analysis for those inputs which are required for both analyses.
- F.** PM<sub>10</sub> or CO mitigation or control measures shall be assumed in the hot-spot analysis only where there are enforceable written commitments from the project sponsor or operator to the implementation of such measures, as required by R18-2-1433(A).
- G.** CO and PM<sub>10</sub> hot-spot analyses are not required to consider construction-related activities which cause temporary increases in emissions. Each site which is affected by construction-related activities shall be considered separately, using established "Guideline" methods. Temporary increases are defined as those which occur only during the construction phase and last five years or less at any individual site.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1432. Using the Motor Vehicle Emissions Budget in the Applicable Implementation Plan or Implementation Plan Submission**

- A.** In interpreting an applicable implementation plan or implementation plan submission with respect to its motor vehicle emissions budget, ADOT or the MPO where one exists and USDOT may not infer additions to the budget that are not explicitly intended by the implementation plan or submission. Unless the implementation plan explicitly quantifies the amount by which motor vehicle emissions could be higher while still allowing a demonstration of compliance with the milestone, attainment, or maintenance requirement and explicitly states an intent that some or all of this additional amount should be available to ADOT or the MPO and USDOT in the emission budget for conformity purposes, ADOT or the MPO may not interpret the budget to be higher than the implementation plan's estimate of future emissions. This applies in particular to applicable implementation plans or submissions which demonstrate that after implementation of control measures in the implementation plan any of the following apply:
1. Emissions from all sources will be less than the total emissions that would be consistent with a required demonstration of an emissions reduction milestone.
  2. Emissions from all sources will result in achieving attainment prior to the attainment deadline or ambient concentrations in the attainment deadline year will be lower than needed to demonstrate attainment.
  3. Emissions will be lower than needed to provide for continued maintenance.
- B.** If an applicable implementation plan submitted before November 24, 1993, demonstrates that emissions from all sources will be less than the total emissions that would be consistent with attainment and quantifies that "safety margin," the state may submit a SIP revision which assigns some or all of this safety margin to highway and transit mobile sources for the purposes of conformity. Such a SIP revision, once it is endorsed by the governor and has been subject to a public hearing, may be used for the purposes of transportation conformity before it is approved by EPA.
- C.** A conformity demonstration shall not trade emissions among budgets which the applicable implementation plan or implementation plan submission allocates for different pollutants or precursors, or among budgets allocated to motor vehicles and other sources, without a SIP revision or a SIP which establishes mechanisms for such trades.
- D.** If the applicable implementation plan or implementation plan submission estimates future emissions by geographic subarea of the nonattainment area, ADOT or the MPO where one exists and USDOT are not required to consider this to establish subarea budgets, unless the applicable implementation plan or implementation plan submission explicitly indicates an intent to create such subarea budgets for the purposes of conformity.
- E.** If a nonattainment area includes more than one MPO, the SIP may establish motor vehicle emissions budgets for each MPO. Otherwise, the MPOs shall collectively make a conformity determination for the entire nonattainment area.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1433. Enforceability of Design Concept and Scope and Project-level Mitigation and Control Measures**

- A.** Prior to determining that a transportation project is in conformity, ADOT, the MPO where one exists, other recipient of funds designated under 23 U.S.C. or the Federal Transit Act, FHWA, or FTA shall obtain from the project sponsor or operator enforceable written commitments to implement in the construction of the project and operation of the resulting facility or

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

service any project-level mitigation or control measures which are identified as conditions for NEPA process completion with respect to local PM<sub>10</sub> or CO impacts. Before making conformity determinations enforceable written commitments shall also be obtained for project-level mitigation or control measures which are conditions for making conformity determinations for a transportation plan or TIP and included in the project design concept and scope which is used in the regional emissions analysis required by R18-2-1418 through R18-2-1420 and R18-2-1422 through R18-2-1424 or used in the project-level hot-spot analysis required by R18-2-1416 and R18-2-1421.

- B. Project sponsors voluntarily committing to mitigation measures to facilitate positive conformity determinations shall provide enforceable written commitments and comply with the obligations of such commitments.
- C. Enforceable written commitments to mitigation or control measures shall be obtained prior to a positive conformity determination, and that project sponsors shall comply with such commitments.
- D. During the control strategy and maintenance periods, if ADOT, the MPO, or project sponsor believes the mitigation or control measure is no longer necessary for conformity, the project sponsor or operator may be relieved of its obligation to implement the mitigation or control measure if it can demonstrate that the requirements of R18-2-1416, R18-2-1418, and R18-2-1419 are satisfied without the mitigation or control measure and so notifies the agencies involved in the inter-agency consultation process required under R18-2-1405. ADOT or the MPO where one exists and USDOT shall confirm that the transportation plan and TIP still satisfy the requirements of R18-2-1418 and R18-2-1419 and that the project still satisfies the requirements of R18-2-1416, and therefore that the conformity determinations for the transportation plan, TIP, and project are still valid.

**Historical Note**

Adopted effective June 15, 1995 (Supp. 95-2).

**R18-2-1434. Exempt Projects**

Notwithstanding the other requirements of this subpart, highway and transit projects of the types listed in Table 2 are exempt from the requirement that a conformity determination be made. Such projects may proceed toward implementation even in the absence of a conforming transportation plan and TIP. A particular action of the type listed in Table 2 is not exempt if ADOT or the MPO where one exists in consultation with other agencies pursuant to R18-2-1405, the EPA, and the FHWA (in the case of a highway project) or the FTA (in the case of a transit project) concur that it has potentially adverse emissions impacts for any reason. States and MPOs shall ensure that exempt projects do not interfere with TCM implementation.

**R18-2-1435. Projects Exempt from Regional Emissions Analyses**

Notwithstanding the other requirements of this subpart, highway and transit projects of the types listed in Table 3 are exempt from regional emissions analysis requirements. The local effects of these projects with respect to CO or PM<sub>10</sub> concentrations shall be considered to determine if a hot-spot analysis is required prior to making a project-level conformity determination. These projects may then proceed to the project development process even in the absence of a conforming transportation plan and TIP. A particular action of the type listed in Table 3 is not exempt from regional emissions analysis if the MPO in consultation with other agencies pursuant to R18-2-1405, the EPA, and the FHWA (in the case of a highway project) or the FTA (in the case of a transit project) concur that it has potential regional impacts for any reason.

  4. Transitional ozone areas,
  5. Incomplete data ozone areas,

- B. The criteria and procedures in R18-2-1422 through R18-2-1424 will remain in effect throughout the control strategy period for transportation plans, TIPs, and projects (not from a conforming plan and TIP) in lieu of the procedures in R18-2-1418 through R18-2-1420, except as otherwise provided in subsection (C).
- C. The state or MPO may voluntarily develop an attainment demonstration and corresponding motor vehicle emissions budget like those required in areas with higher nonattainment classifications. ## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

7. Minimizing soil content when slash piles are constructed by using brush blades on material-moving equipment and by constructing piles under dry soil conditions or by using hand piling methods;
  8. Burning fuels in piles or windrows;
  9. Using a backing fire in grass fuels;
  10. Burning fuels with an air curtain destructor, as defined in R18-2-101, operated according to manufacturer specifications and meeting applicable state or local opacity requirements;

  7. Using all opportunities that meet the burn prescription and all burn locations to spread smoke impacts over a broader time period and geographic area;
  8. Burning during optimum mid-day dispersion hours, with all ignitions in a burn unit completed by 3:00 p.m. to prevent trapping smoke in inversion or diurnal windflow patterns;
  9. Providing information on the adverse impacts of using green or wet wood as fuel when public firewood access is allowed;
  10. Implementing maintenance burning in a periodic rotation to shorten prescribed fire duration and reduce excessive fuel accumulations that could result in excessive smoke production in a wildfire; and

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

L. 40 CFR 51.128, Appendix A(1)(B).

M. Silt Content Test Method. The purpose of this test method is to estimate the silt content of the trafficked parts of commercial farm roads, as defined in R18-2-610. The higher the silt content, the more fine dust particles that are released when cars and trucks drive on commercial farm roads.

1. Equipment:

- a. A set of sieves with the following openings: 4 millimeters (mm), 2mm, 1 mm, 0.5 mm and 0.25 mm and a lid and collector pan
  - b. A small whisk broom or paintbrush with stiff bristles and dustpan 1 ft. in width. (The broom/brush should preferably have one, thin row of bristles no longer than 1.5 inches in length.)
  - c. A spatula without holes A small scale with half ounce increments (e.g. postal/package scale)
  - d. A shallow, lightweight container (e.g. plastic storage container)
  - e. A sturdy cardboard box or other rigid object with a level surface
  - f. Basic calculator
  - g. Cloth gloves (optional for handling metal sieves on hot, sunny days)
  - h. Sealable plastic bags (if sending samples to a laboratory)
  - i. Pencil/pen and paper
2. Step 1: Look for a routinely-traveled surface, as evidenced by tire tracks. [Only collect samples from surfaces that are not wet or damp due to precipitation, dew or watering.] Use caution when taking samples to ensure personal safety with respect to passing vehicles. Gently press the edge of a dustpan (1 foot in width) into the surface four times to mark an area that is 1 square foot. Collect a sample of loose surface material using a whisk broom or brush and slowly sweep the material into the dustpan, minimizing escape of dust particles. Use a spatula to lift heavier elements such as gravel. Only collect dirt/gravel to an approximate depth of 3/8 inch or 1 cm in the 1 square foot area. If you reach a hard, underlying subsurface that is < 3/8 inch in depth, do not continue collecting the sample by digging into the hard surface. In other words, you are only collecting a surface sample of loose material down to 1 cm. In order to confirm that samples are collected to 1 cm. in depth, a wooden dowel or other similar narrow object at least 1 foot in length can be laid horizontally across the survey area while a metric ruler is held perpendicular to the dowel. At this point, you can choose to place the sample collected into a plastic bag or container and take it to an independent laboratory for silt content analysis. A reference to the procedure the laboratory is required to follow is in subsection (10) below.
3. Step 2: Place a scale on a level surface. Place a lightweight container on the scale. Zero the scale with the weight of the empty container on it. Transfer the entire sample collected in the dustpan to the container, minimizing escape of dust particles. Weigh the sample and record its weight.
4. Step 3: Stack a set of sieves in order according to the size openings specified above, beginning with the largest size opening (4 mm) at the top. Place a collector pan underneath the bottom (0.25 mm) sieve.
5. Step 4: Carefully pour the sample into the sieve stack, minimizing escape of dust particles by slowly brushing material into the stack with a whisk broom or brush. (On

windy days, use the trunk or door of a car as a wind barricade.) Cover the stack with a lid. Lift up the sieve stack and shake it vigorously up, down and sideways for at least 1 minute.

6. Step 5: Remove the lid from the stack and disassemble each sieve separately, beginning with the top sieve. As you remove each sieve, examine it to make sure that all of the material has been sifted to the finest sieve through which it can pass; e.g. material in each sieve (besides the top sieve that captures a range of larger elements) should look the same size. If this is not the case, re-stack the sieves and collector pan, cover the stack with the lid, and shake it again for at least 1 minute. (You only need to reassemble the sieve(s) that contain material which requires further sifting.)
7. Step 6: After disassembling the sieves and collector pan, slowly sweep the material from the collector pan into the empty container originally used to collect and weigh the entire sample. Take care to minimize escape of dust particles. You do not need to do anything with material captured in the sieves -- only the collector pan. Weigh the container with the material from the collector pan and record its weight.
8. Step 7: If the source is an unpaved road, multiply the resulting weight by 0.38. If the source is an unpaved parking lot, multiply the resulting weight by 0.55. The resulting number is the estimated silt loading. Then, divide by the total weight of the sample you recorded earlier in Step 2 and multiply by 100 to estimate the percent silt content.
9. Step 8: Select another two routinely-traveled portions of the unpaved road or unpaved parking lot and repeat this test method. Once you have calculated the silt loading and percent silt content of the three samples collected, average your results together.
10. Step 9: Examine Results. If the average silt loading is less than 0.33 oz/ft<sup>2</sup>, the surface is STABLE. If the average silt loading is greater than or equal to 0.33 oz/ft<sup>2</sup>, then proceed to examine the average percent silt content. If the source is an unpaved road and the average percent silt content is 6% or less, the surface is STABLE. If the source is an unpaved parking lot and the average percent silt content is 8% or less, the surface is STABLE. If your field test results are within 2% of the standard (for example, 4%-8% silt content on an unpaved road), it is recommended that you collect three additional samples from the source according to Step 1 and take them to an independent laboratory for silt content analysis.
11. Independent Laboratory Analysis: You may choose to collect 3 samples from the source, according to Step 1, and send them to an independent laboratory for silt content analysis rather than conduct the sieve field procedure. If so, the test method the laboratory is required to use comes from the following text: *Procedures For Laboratory Analysis Of Surface/Bulk Dust Loading Samples*, (Fifth Edition, Volume I, Appendix C.2.3 "Silt Analysis", 1995), AP-42, Office of air Quality Planning & Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina.

**A9.4.** Owners or operators of all continuous monitoring systems installed in accordance with the provisions of these rules shall check the zero and span drift at least once daily in accordance with the method prescribed by the manufacturer of such systems unless the manufacturer recommends adjustments at shorter intervals, in which case such recommendations shall be followed. The zero and span shall, as a minimum, be adjusted whenever the 24-hour zero drift or 24-hour calibration drift limits of the applicable performance specifications in 40 CFR 60, Appendix B are exceeded. For continuous monitoring systems measuring opacity of emissions, the optical surfaces exposed to the effluent gases shall be cleaned prior to performing the zero or span drift adjustments except that for systems using automatic zero adjustments, the optical surfaces shall be cleaned when the cumulative automatic zero compensation exceeds 4% opacity. Unless otherwise approved by the Director, the following procedures, as applicable, shall be followed:

**A9.4.1.** For extractive continuous monitoring systems measuring gases, minimum procedures shall include introducing applicable zero and span gas mixtures into the measurement system as near the probe as practical. Span and zero gases certified by their manufacturer to be traceable to the National Bureau of Standards reference gases will be used whenever these reference gases are available. The span and zero gas mixtures shall be the same composition as specified in the 40 CFR 60, Appendix B. Every six months from date of manufacture, span and zero gases shall be re-analyzed by conducting triplicate analyses with Reference Methods 6 for SO<sub>2</sub>, 7 for NO<sub>x</sub> and 3 for O<sub>2</sub> and CO<sub>2</sub>, respectively. The gases may be analyzed at less frequent intervals if longer shelf lives are guaranteed by the manufacturer.

**A9.4.2.** For nonextractive continuous monitoring systems measuring gases, minimum procedures shall include upscale check(s) using a certified calibration gas cell or test cell which is functionally equivalent to a known gas concentration. The zero check may be performed by computing the zero value from upscale measurements or by mechanically producing a zero condition.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

all continuous monitoring systems shall be in continuous operation and shall meet minimum frequency of operation requirements as follows:

- A9.5.1.** All continuous monitoring systems referenced by A9.3.1. and A9.3.2. above for measuring opacity of emissions shall complete a minimum of one cycle of operation (sampling, analyzing, and data recording) for each successive 10-second period.
- A9.5.2.** All continuous monitoring systems referenced by A9.3.1. above for measuring oxides of nitrogen, sulfur dioxide, carbon dioxide, or oxygen shall complete a minimum of one cycle of operation (sampling, analyzing, and data recording) for each successive 15-minute period.
- A9.5.3.** All continuous monitoring systems referenced by A9.3.2. above, except opacity, shall complete a minimum of one cycle of operation (sampling, analyzing, and data recording) for each successive one-hour period.
- A9.6.** All continuous monitoring systems for monitoring devices shall be installed such that representative measurements of emissions or process parameters from the affected facility are obtained. Additional procedures for location of continuous monitoring systems contained in the applicable Performance Specifications of 40 CFR 60, Appendix B shall be used.
- A9.7.** When the effluents from a single affected facility or two or more affected facilities subject to the same emission standards are combined before being released to the atmosphere, the owner or operator may install applicable continuous monitoring systems on each effluent or on the combined effluent. When the affected facilities are not subject to the same emission standards, separate continuous monitoring systems shall be installed on each effluent. When the effluent from one affected facility is released to the atmosphere through more than one point, the owner or operator shall install applicable continuous monitoring systems on each separate effluent unless the installation of fewer systems is approved by the Director.
- A9.8.** Owners or operators of all continuous monitoring systems for measurement of opacity shall reduce all data to six-minute averages and for systems other than opacity to one-hour averages, respectively. Six minute opacity averages shall be calculated from 24 or more data points equally spaced over each six-minute period. For systems other than opacity, one-hour averages shall be computed from four or more data points equally spaced over each one-hour period. Data recorded during periods of system breakdowns, repairs, calibration checks, and zero and span adjustments shall not be included in the data averages computed under this subsection. An arithmetic or integrated average of all data may be used. The data output of all continuous monitoring systems may be recorded in reduced or nonreduced form (e.g. ppm pollutant and percent O<sub>2</sub> or lb/million Btu of pollutant). All excess emissions shall be converted into units of the standard using the applicable conversion procedures specified in subparts. After conversion into units of the standard, the data may be rounded to the same number of significant digits used in these rules to specify the applicable standard (e.g., rounded to the nearest 1% opacity).
- A9.9.** Upon written application by an owner or operator, the Director may approve alternatives to any monitoring procedures or requirements of these rules including, but not limited to the following:

- A9.9.1.** Alternative monitoring requirements when installation of a continuous monitoring system or monitoring device specified by these rules would not provide accurate measurements due to liquid water or other interferences caused by substances with the effluent gases.
- A9.9.2.** Alternative monitoring requirements when the affected facility is infrequently operated.
- A9.9.3.** Alternative monitoring requirements to accommodate continuous monitoring systems that require additional measurements to correct for stack moisture conditions.
- A9.9.4.** Alternative locations for installing continuous monitoring systems or monitoring devices when the owner or operator can demonstrate that installation at alternate locations will enable accurate and representative measurements.
- A9.9.5.** Alternative methods of converting pollutant concentration measurements to units of the standards.
- A9.9.6.** Alternative procedures for performing daily checks of zero and span drift that do not involve use of span gases or test cells.
- A9.9.7.** Alternatives to the ASTM test methods or sampling procedures specified by any subpart.
- A9.9.8.** Alternative continuous monitoring systems that do not meet the design or performance requirements in Performance Specification 1 in 40 CFR 60, Appendix B but adequately demonstrate a definite and consistent relationship between its measurements and the measurements of opacity by a system complying with the requirements in Performance Specification 1. The Director may require that such demonstration be performed for each affected facility.
- A9.9.9.** Alternative monitoring requirements when the effluent from a single affected facility or the combined effluent from two or more affected facilities are released to the atmosphere through more than one point.

**A14. Appendix 14. Procedures for Sulfur Dioxide and Lead Fugitive Emissions Studies for the Hayden Smelter****A14.1. Applicability**

This Appendix applies to the owner or operator of the primary copper smelter located in Hayden, Arizona at latitude 33°0'15"N and longitude 110°46'31"W.

**A14.2. Study Objectives**

The owner or operator shall conduct fugitive emissions studies to derive a measurement or accurate estimate of total fugitive sulfur dioxide and lead emissions from the Hayden smelter during operations, including planned and unplanned start-up and shutdown periods and malfunctions, for the processes identified in A14.3 below. The studies shall include uncaptured fugitive sulfur dioxide emissions from the smelter processing units, but not emissions due solely to the use of fuel for space heating or steam generation, burners at anode casting, or slag pouring at the slag dump. The studies shall evaluate the extent to which correlations may exist between fugitive sulfur dioxide, lead, and particulate matter (PM/PM<sub>10</sub>/PM<sub>2.5</sub>) emissions, and shall develop such correlations as feasible.

The studies shall also be used to help validate that the operating conditions or ranges specified in the capture and control device maintenance and operations plans required in R18-2-B1301(D)(2) and R18-2-B1302(D)(2) are consistent with operating conditions demonstrating attainment of the 2008 Lead National Ambient Air Quality Standards (NAAQS) in the Hayden 2008 Lead NAAQS Nonattainment Area State Implementation Plan (SIP) and the 2010 Sulfur Dioxide NAAQS in the Hayden 2010 Sulfur Dioxide NAAQS Nonattainment Area SIP.

**A14.3. Processes Evaluated**

From the fugitive emissions studies, the owner or operator shall develop an emission factor or accurate estimate of fugitive emissions for sulfur dioxide and lead during operations, including planned and unplanned start-up and shutdown periods and malfunctions, produced by each of the following smelting processes:

- i. Flash furnace building, including flash furnace and dryer operations
- ii. Converter aisle, including converter and related operations
- iii. Anode furnace aisle, including oxidizing, poling and related operations

**A14.4. Averaging Periods**

The emission estimate shall include the average pounds per hour emission factor for the fugitive lead and sulfur dioxide emissions from each step in the smelting process identified in A14.3. The estimate shall include all time periods, including planned and unplanned start-up and shutdown periods and malfunctions.

**A14.5. Methods and Study Protocols**

The owner or operator shall submit to the Department and EPA Region IX for review and approval study protocols at least six months prior to conducting fugitive emission studies. Study protocols must be approved by the Department and EPA Region IX prior to commencement of fugitive emissions studies. Study protocols shall specify the method(s) used to meet the study objectives as described in A14.2, including during all recurring operating scenarios from all processes identified in A14.3.

Each fugitive emissions measurement system shall include validation of adequate velocity for flow measurements (i.e., the expected exhaust velocity is within the measurement range of the instrument), and have a sufficient number of flow and temperature sensors to ensure calculation of representative exhaust flows through each roof monitor vent. The number of such sensors and their locations for each monitoring system shall account for the physical configuration of the roof monitor vent, the locations of emitting activities relative to the roof monitor vent, and heat generated by the equipment served by the roof monitor vent.

The fugitive emissions studies shall include operation and process information to help understand the emission impacts of startup, shutdown, malfunctions, and significant changes in process operations. This shall include, for example, dates, times and duration of these events, cause of malfunctions, and descriptions of process changes.

After the completion of each fugitive emissions study, the owner or operator shall modify study methods based on data and lessons learned from previous studies, and submit such modified methods in the proceeding study protocols prior to conducting future emissions studies.

**A14.6. Study Duration, Frequency, and Submission Schedule**

The first fugitive emissions study must commence not later than six months after the completion of the Converter Retrofit Project authorized by Significant Permit Revision No. 60647. The second study commencement date shall occur within the same calendar quarter, but five years later from the date of commencement of the first study. The owner or operator shall submit the results of each fugitive emissions study in a report to the Department and EPA Region IX for review and approval not later than six months after completing a study. The data collection portion of the first and second fugitive emissions studies shall be conducted for a period of 12 months to assess the content and quantity of fugitive sulfur dioxide and lead emissions.

**A14.7. Study Reports and Subsequent Studies**

At minimum, fugitive emission study reports submitted pursuant to A14.6 must include:

- i. Resultant emission factors used to determine fugitive emissions of sulfur dioxide and lead.
- ii. Resultant average fugitive lead emissions for each process identified in A14.3.
- iii. Resultant peak one-hour fugitive sulfur dioxide emissions for each process identified in A14.3.
- iv. Seasonal differences, if any.
- v. Comparisons of results from past studies, if any.
- vi. Descriptions and identification of volumetric flow monitoring provisions in R18-2-B1301(D)(2)(a) and R18-2-B1302(D)(2)(a) and operational limits R18-2-B1301(D)(2)(b) and R18-2-B1302(D)(2)(b) that are associated with fugitive emissions.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

- vii. An analysis of whether the results from a study demonstrate that the volumetric flow monitoring provisions in R18-2-B1301(D)(2)(a) and R18-2-B1302(D)(2)(a) and the operational limits in R18-2-B1301(D)(2)(b) and R18-2-B1302(D)(2)(b) continuously ensure that actual fugitive sulfur dioxide and lead emissions are consistent with the modeled emission rates used in the attainment demonstrations in the Hayden 2008 Lead NAAQS Nonattainment Area SIP and the Hayden 2010 Sulfur Dioxide NAAQS Nonattainment Area SIP. The analysis must also identify subsequent fugitive emissions studies, if any, needed to remedy inaccurate operational limits and volumetric flow monitoring provisions and to ensure attainment of the 2008 Lead NAAQS and 2010 Sulfur Dioxide NAAQS. The scope, duration, and frequency of any subsequent fugitive emissions studies must also be identified. This provision and the report's conclusion neither require nor prohibit future fugitive emission studies.
- viii. An analysis of whether supplemental modeling is needed to demonstrate that resultant fugitive emissions from a study provide attainment of the 2008 Lead NAAQS and 2010 Sulfur Dioxide NAAQS.
- ix. A summary of methods as followed per approved study protocols.

**A14.8. Revisions to Operations and Maintenance Plan**

If an analysis conducted in accordance with A14.7(vi) demonstrates that fugitive emissions associated with volumetric flow monitoring provisions in R18-2-B1301(D)(2)(a) and R18-2-B1302(D)(2)(a) and operational limits in R18-2-B1301(D)(2)(b) and R18-2-B1302(D)(2)(b) may exceed the modeled emission rates used in the Hayden 2008 Lead NAAQS Nonattainment Area SIP attainment demonstration and/or the Hayden 2010 Sulfur Dioxide NAAQS Nonattainment Area SIP attainment demonstration, and result in an increased likelihood of a NAAQS exceedance based on modeling required under A14.9, then the owner or operator shall submit to the Department for approval, not later than six months after completing a study, recommended changes to operational limits and volumetric flow monitoring provisions as an operations and maintenance plan revision pursuant to R18-2-B1301(D)(2)(e) and R18-2-B1302(D)(2)(e) that would achieve necessary fugitive emissions levels to demonstrate attainment of the NAAQS at the same level of assurance as in the attainment demonstrations. Until receiving approval of the plan revision, the owner or operator shall operate and maintain the volumetric flow monitoring provisions and the operational limits in accordance with the plan as initially submitted pursuant to R18-2-B1301(D)(2)(e) and R18-2-B1302(D)(2)(e). Additionally, the owner and operator shall submit new attainment demonstrations pursuant to A14.9, making appropriate demonstrations of attainment at adjusted fugitive emissions levels.

Similarly, if an analysis conducted in accordance with A14.7(vi) demonstrates that fugitive emissions associated with the volumetric flow monitoring provisions in R18-2-B1301(D)(2)(a) and R18-2-B1302(D)(2)(a) and operational limits in R18-2-B1301(D)(2)(b) and R18-2-B1302(D)(2)(b) may exceed the modeled emission rates used in the Hayden 2008 Lead NAAQS Nonattainment Area SIP attainment demonstration and/or the Hayden

2010 Sulfur Dioxide NAAQS Nonattainment Area SIP attainment demonstration, and result in an increased likelihood of a NAAQS exceedance based on modeling required under A14.9, then the Department shall submit appropriate changes to the operational limits and volumetric flow monitoring provisions, and any revised attainment demonstration pursuant to A14.9, if applicable, to EPA Region IX as a SIP revision not later than 12 months after completion of a fugitive emissions study.

**A14.9. Supplemental Modeling**

If an analysis conducted in accordance with A14.7(vii) demonstrates that fugitive emissions associated with volumetric flow monitoring provisions in R18-2-B1301(D)(2)(a) and R18-2-B1302(D)(2)(a) and operational limits in R18-2-B1301(D)(2)(b) and R18-2-B1302(D)(2)(b) are greater than the modeled emission rates used in the Hayden 2008 Lead NAAQS Nonattainment Area SIP attainment demonstration and/or the Hayden 2010 Sulfur Dioxide NAAQS Nonattainment Area SIP attainment demonstration, the owner or operator shall remodel to demonstrate whether the 2010 Sulfur Dioxide NAAQS and/or 2008 Lead NAAQS will be attained as such higher rates. The owner or operator shall submit such modeling to the Department and EPA Region IX for review and approval not later than six months after completing a fugitive emissions study.

If the revised modeling demonstrates that the 2010 Sulfur Dioxide NAAQS and/or 2008 Lead NAAQS will be attained, the Department shall submit such modeling demonstration and revised fugitive emissions assumptions as a SIP revision to EPA Region IX not later than 12 months after completion of a fugitive emissions study. Alternatively, the owner or operator shall propose additional emission control requirements to revise the SIP, or any combination of revised control measures and modeled attainment, to demonstrate attainment of the 2010 Sulfur Dioxide NAAQS and/or 2008 Lead NAAQS.

**Historical Note**

A14, Appendix 14 made by final rulemaking at 23 A.A.R. 722, effective May 7, 2017 (Supp. 17-1). Because of a clerical error in Supp. 17-1, A14, Appendix 14 was inadvertently published at the end of Article 13. At the request of the Department it has been moved to the end of this Chapter (Supp. 17-3). Subsection levels updated for clarity. No other changes have been made to Appendix 14 (Supp. 21-4).

**A15. Appendix 15. Test Methods for Determining Opacity and Stabilization of Unpaved Roads****A15.1. Applicability**

This Appendix applies to unpaved roads at the primary copper smelter located in Hayden, Arizona at latitude 33°0'15"N and longitude 110°46'31"W.

**A15.2. Opacity Test Method**

The purpose of this test method is to estimate the percent opacity of fugitive dust plumes caused by vehicle movement on unpaved roads. This method can only be conducted by an individual who has received certification as a qualified observer. Qualification and testing requirements can be found in Section A15.4 of this Appendix.

**A15.2.1. Step 1**

Stand at least 16.5 feet from the fugitive dust source in order to provide a clear view of the emissions with the sun oriented in the 140° sector to the

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

back. Following the above requirements, make opacity observations so that the line of vision is approximately perpendicular to the dust plume and wind direction. If multiple plumes are involved, do not include more than one plume in the line of sight at one time.

**A15.2.2. Step 2**

Record the fugitive dust source location, source type, method of control used, if any, observer's name, certification data and affiliation, and a sketch of the observer's position relative to the fugitive dust source. Also record the time, estimated distance to the fugitive dust source location, approximate wind direction, estimated wind speed, description of the sky condition (presence and color of clouds), observer's position to the fugitive dust source, and color of the plume and type of background on the visible emission observation from both when opacity readings are initiated and completed.

**A15.2.3. Step 3**

Make opacity observations, to the extent possible, using a contrasting background that is perpendicular to the line of vision. Make opacity observations approximately 1 meter above the surface from which the plume is generated. Note that the observation is to be made at only one visual point upon generation of a plume, as opposed to visually tracking the entire length of a dust plume as it is created along a surface. Make two observations per vehicle, beginning with the first reading at zero seconds and the second reading at five seconds. The zero-second observation should begin immediately after a plume has been created above the surface involved. Do not look continuously at the plume but, instead, observe the plume briefly at zero seconds and then again at five seconds.

**A15.2.4. Step 4**

Record the opacity observations to the nearest 5% on an observational record sheet. Each momentary observation recorded represents the average opacity of emissions for a 5-second period. While it is not required by the test method, EPA recommends that the observer estimate the size of vehicles which generate dust plumes for which readings are taken (e.g. midsize passenger car or heavy-duty truck) and the approximate speeds the vehicles are traveling when readings are taken.

**A15.2.5. Step 5**

Repeat Step 3 (Section A15.2.3 of this Appendix) and Step 4 (Section A15.2.4 of this Appendix) until you have recorded a total of 12 consecutive opacity readings. This will occur once six vehicles have driven on the source in your line of observation for which you are able to take proper readings. The 12 consecutive readings must be taken within the same period of observation but must not exceed 1 hour. Observations immediately preceding and following interrupted observations can be considered consecutive.

**A15.2.6. Step 6**

Average the 12 opacity readings together. If the average opacity reading equals 20% or lower, the source is in compliance.

**A15.3. Silt Content Test Method**

The purpose of this test method is to estimate the silt content of the trafficked parts of unpaved roads. The higher the silt content, the more fine dust particles that are released when cars and trucks drive on unpaved roads.

**A15.3.1. Equipment**

**A15.3.1.1.** A set of sieves with the following openings: 4 millimeters (mm), 2 mm, 1 mm, 0.5 mm and 0.25 mm (or a set of standard/commonly available sieves), a lid, and collector pan.

**A15.3.1.2.** A small whisk broom or paintbrush with stiff bristles and dustpan 1 ft. in width. (The broom/brush should preferably have one, thin row of bristles no longer than 1.5 inches in length).

**A15.3.1.3.** A spatula without holes.

**A15.3.1.4.** A small scale with half-ounce increments (e.g., postal/package scale).

**A15.3.1.5.** A shallow, lightweight container (e.g., plastic storage container).

**A15.3.1.6.** A sturdy cardboard box or other rigid object with a level surface.

**A15.3.1.7.** A basic calculator.

**A15.3.1.8.** Cloth gloves (optional for handling metal sieves on hot, sunny days).

**A15.3.1.9.** Sealable plastic bags (if sending samples to a laboratory).

**A15.3.1.10.** A pencil/pen and paper.

**A15.3.2. Step 1**

Look for a routinely traveled surface, as evidenced by tire tracks. (Only collect samples from surfaces that are not damp due to precipitation or dew. This statement is not meant to be a standard in itself for dampness where watering is being used as a control measure. It is only intended to ensure that surface testing is done in a representative manner.) Use caution when taking samples to ensure personal safety with respect to passing vehicles. Gently press the edge of a dustpan (1 foot in width) into the surface four times to mark an area that is 1 square foot. Collect a sample of loose surface material using a whiskbroom or brush and slowly sweep the material into the dustpan, minimizing escape of dust particles. Use a spatula to lift heavier elements such as gravel. Only collect dirt/gravel to an approximate depth of 3/8 inch or 1 cm in the 1 square foot area. If you reach a hard, underlying subsurface that is < 3/8 inch in depth, do not continue collecting the sample by digging into the hard surface. In other words, you are only collecting a surface sample of loose material down to 1 cm. In order to confirm that samples are collected to 1 cm in depth, a wooden dowel or other similar narrow object at least 1 foot in length can be laid horizontally across the survey area while a metric ruler is held perpendicular to the dowel. At this point, you can choose to place the sample collected into a plastic bag or container and take it to an independent laboratory for silt content analysis. A reference to the procedure the laboratory is required to follow is at the end of this section.

**A15.3.3. Step 2**

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

Place a scale on a level surface. Place a light-weight container on the scale. Zero the scale with the weight of the empty container on it. Transfer the entire sample collected in the dustpan to the container, minimizing escape of dust particles. Weigh the sample and record its weight.

**A15.3.4. Step 3**

Stack a set of sieves in order according to the size openings specified above, beginning with the largest size opening (4 mm) at the top. Place a collector pan underneath the bottom (0.25 mm) sieve.

**A15.3.5. Step 4**

Carefully pour the sample into the sieve stack, minimizing escape of dust particles by slowly brushing material into the stack with a whisk-broom or brush. (On windy days, use the trunk or door of a car as a wind barricade.) Cover the stack with a lid. Lift up the sieve stack and shake it vigorously up, down and sideways for at least 1 minute.

**A15.3.6. Step 5**

Remove the lid from the stack and disassemble each sieve separately, beginning with the top sieve. As you remove each sieve, examine it to make sure that all of the material has been sifted to the finest sieve through which it can pass (e.g., material in each sieve [besides the top sieve that captures a range of larger elements] should look the same size). If this is not the case, re-stack the sieves and collector pan, cover the stack with the lid, and shake it again for at least 1 minute. (You only need to reassemble the sieve(s) that contain material, which requires further sifting.)

**A15.3.7. Step 6**

After disassembling the sieves and collector pan, slowly sweep the material from the collector pan into the empty container originally used to collect and weigh the entire sample. Take care to minimize escape of dust particles. You do not need to do anything with material captured in the sieves; only the collector pan. Weigh the container with the material from the collector pan and record its weight.

**A15.3.8. Step 7**

If the source is an unpaved road, multiply the resulting weight by 0.38. The resulting number is the estimated silt loading. Then, divide by the total weight of the sample you recorded earlier in Step 2 (Section A15.3.3 of this Appendix) and multiply by 100 to estimate the percent silt content.

**A15.3.9. Step 8**

Select another two routinely traveled portions of the unpaved road and repeat this test method. Once you have calculated the silt loading and percent silt content of the three samples collected, average your results together.

**A15.3.10. Step 9**

Examine results. If the average silt loading is less than 0.33 oz/ft<sup>2</sup>, the surface is STABLE. If the average silt loading is greater than or equal to 0.33 oz/ft<sup>2</sup>, then proceed to examine the average percent silt content. If the source is an unpaved road and the average percent silt content is 6% or less, the surface is STABLE. If your field test results are

within 2% of the standard (for example, 4%–8% silt content on an unpaved road), it is recommended that you collect three additional samples from the source according to Step 1 (Section A15.3.2 of this Appendix) and take them to an independent laboratory for silt content analysis.

**A15.3.11. Independent Laboratory Analysis**

You may choose to collect 3 samples from the source, according to Step 1 (Section A15.3.2 of this Appendix), and send them to an independent laboratory for silt content analysis rather than conduct the sieve field procedure. If so, the test method the laboratory is required to use is: U.S. Environmental Protection Agency (1995), "Procedures for Laboratory Analysis of Surface/Bulk Dust Loading Samples", (AP-42 Fifth Edition, Volume I, Appendix C.2.3 "Silt Analysis"), Office of Air Quality Planning and Standards, Research Triangle Park, North Carolina.

**A15.4. Qualification and Testing****A15.4.1. Certification Requirements**

To receive certification as a qualified observer, a candidate must be tested and demonstrate the ability to assign opacity readings in 5% increments to 25 different black plumes and 25 different white plumes, with an error not to exceed 15% opacity on any one reading and an average error not to exceed 7.5% opacity in each category. Candidates shall be tested according to the procedures described in Section A15.4.2 of this Appendix. Any smoke generator used pursuant to Section A15.4.2 of this Appendix shall be equipped with a smoke meter which meets the requirements of Section A15.4.3 of this Appendix. Certification tests that do not meet the requirements of Sections A15.4.2 and A15.4.3 of this Appendix are not valid. The certification shall be valid for a period of six months, and after each six-month period the qualification procedures must be repeated by an observer in order to retain certification.

**A15.4.2. Certification Procedure**

The certification test consists of showing the candidate a complete run of 50 plumes, 25 black plumes and 25 white plumes, generated by a smoke generator. Plumes shall be presented in random order within each set of 25 black and 25 white plumes. The candidate assigns an opacity value to each plume and records the observation on a suitable form. At the completion of each run of 50 readings, the score of the candidate is determined. If a candidate fails to qualify, the complete run of 50 readings must be repeated in any retest. The smoke test may be administered as part of a smoke school or training program, and may be preceded by training or familiarization runs of the smoke generator, during which candidates are shown black and white plumes of known opacity.

**A15.4.3. Smoke Generator Specifications**

Any smoke generator used for the purpose of Section A15.4.2 of this Appendix shall be equipped with a smoke meter installed to measure opacity across the diameter of the smoke generator stack. The smoke meter output shall display in-stack opacity, based upon a path length equal to the

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 2. DEPARTMENT OF ENVIRONMENTAL QUALITY - AIR POLLUTION CONTROL

stack exit diameter on a full 0% to 100% chart recorder scale. The smoke meter optical design and performance shall meet the specifications shown in Table 1 of this Appendix. The smoke meter shall be calibrated as prescribed in Section A15.4.3.1 of this Appendix prior to conducting each smoke reading test. At the completion of each test, the zero and span drift shall be checked, and if the drift exceeds plus or minus 1% opacity, the condition shall be corrected prior to conducting any subsequent test runs. The smoke meter shall be demonstrated, at the time of installation, to meet the specifications listed in Table 1 of this Appendix. This demonstration shall be repeated following any subsequent repair or replacement of the photocell or associated electronic circuitry, including the chart recorder or output meter, or every six months, whichever occurs first.

**A15.4.3.1. Calibration**

The smoke meter is calibrated after allowing a minimum of 30 minutes warm-up by alternately producing simulated opacity of 0% and 100%. When stable response at 0% or 100% is noted, the smoke meter is adjusted to produce an output of 0% or 100%, as appropriate. This calibration shall be repeated until stable 0% and 100% readings are produced without adjustment. Simulated 0% and 100% opacity values may be produced by alternately switching the power to the light source on and off while the smoke generator is not producing smoke.

**A15.4.3.2. Smoke Meter Evaluation**

The smoke meter design and performance are to be evaluated as follows:

**A15.4.3.2.1. Light Source**

Verify, from manufacturer's data and from voltage measurements made at the lamp, as installed, that the lamp is operated within plus or minus 5% of the nominal rated voltage.

**A15.4.3.2.2. Spectral Response of Photocell**

Verify from manufacturer's data that the photocell has a photopic response (i.e., the spectral sensitivity of the cell shall closely approximate the standard spectral-luminosity curve for photopic vision which is referenced in (b) of Table 1 of this Appendix).

**A15.4.3.2.3. Angle of View**

Check construction geometry to ensure that the total angle of view of the smoke plume, as seen by the photocell, does not exceed 15°. Calculate the total angle of view ( $\phi$ ) as follows:

$$\text{Total Angle of View} = 2 \tan^{-1} (d/2L)$$

where:

d = The photocell diameter + the diameter of the limiting aperture; and

L = The distance from the photocell to the limiting aperture. The limiting aperture is the point in the path between the photocell and the smoke plume where the angle of view is most restricted. In smoke generator smoke meters, this is normally an orifice plate.

**A15.4.3.2.4. Angle of Projection**

Check construction geometry to ensure that the total angle of projection of the lamp on the smoke plume does not exceed 15°. Calculate the total angle of projection ( $\phi$ ) as follows:

$$\text{Total Angle of Projection} = 2 \tan^{-1} (d/2L)$$

where:

d = The sum of the length of the lamp filament + the diameter of the limiting aperture; and

L = The distance from the lamp to the limiting aperture.

**A15.4.3.2.5. Calibration Error**

Using neutral-density filters of known opacity, check the error between the actual response and the theoretical linear response of the smoke meter. This check is accomplished by first calibrating the smoke meter, according to Section A15.4.3.1 of this Appendix, and then inserting a series of three neutral-density filters of nominal opacity of 20%, 50%, and 75% in the smoke meter path length. Use filters calibrated within plus or minus 2%. Care should be taken when inserting the filters to prevent stray light from affecting the meter. Make a total of five nonconsecutive readings for each filter. The maximum opacity error on any one reading shall be plus or minus 3%.

**A15.4.3.2.6. Zero and Span Drift**

Determine the zero and span drift by calibrating and operating the smoke generator in a normal manner over a 1-hour period. The drift is measured by checking the zero and span at the end of this period.

**A15.4.3.2.7. Response Time**

Determine the response time by producing the series of five simulated 0% and 100% opacity values and observing the time required to reach stable response. Opacity values of 0% and 100% may be simulated by alternately switching the power to the light source off and on while the smoke generator is not operating.

## PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), Administrative Rules Division, accepts state agency rule notice and other legal filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the *Administrative Code*. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director  
ADMINISTRATIVE RULES DIVISION

### RULES

The definition for a rule is provided for under A.R.S. § 41-1001. “‘Rule’ means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency.”

### THE ADMINISTRATIVE CODE

The *Arizona Administrative Code* is where the official rules of the state of Arizona are published. The *Code* is the official codification of rules that govern state agencies, boards, and commissions.

The *Code* is separated by subject into Titles. Titles are divided into Chapters. A Chapter includes state agency rules. Rules in Chapters are divided into Articles, then Sections. The “R” stands for “rule” with a sequential numbering and lettering outline separated into subsections.

Rules are codified quarterly in the *Code*. Supplement release dates are printed on the footers of each Chapter.

First Quarter: January 1 - March 31  
Second Quarter: April 1 - June 30  
Third Quarter: July 1 - September 30  
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2022 is cited as Supp. 22-1. Supplements are traditionally released three to four weeks after the end of the quarter because filings are accepted until the last day of the quarter.

Please note: The Office publishes by Chapter, not by individual rule Section. Therefore there might be only a few Sections codified in each Chapter released in a supplement. This is why the Office lists only updated codified Sections on the previous page.

### RULE HISTORY

Refer to the HISTORICAL NOTE at the end of each Section for the effective date of a rule. The note also includes the *Register* volume and page number in which the notice was published (A.A.R.) and beginning in supplement 21-4, the date the notice was published in the *Register*.

### AUTHENTICATION OF PDF CODE CHAPTERS

The Office began to authenticate Chapters of the *Code* in Supp. 18-1 to comply with A.R.S. §§ 41-1012(B) and A.R.S. § 41-5505.

A certification verifies the authenticity of each *Code* Chapter posted as it is released by the Office of the Secretary of State. The authenticated pdf of the *Code* includes an integrity mark with a certificate ID. Users should check the validity of the signature, especially if the pdf has been downloaded. If the digital signature is invalid it means the document’s content has been compromised.

### HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the *Arizona Administrative Register* for recent updates to rule Sections.

### ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature’s website, [www.azleg.gov](http://www.azleg.gov). An agency’s authority note to make rules is often included at the beginning of a Chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

### SESSION LAW REFERENCES

Arizona Session Law references in a Chapter can be found at the Secretary of State’s website, [www.azsos.gov](http://www.azsos.gov) under Services-> Legislative Filings.

### EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt from the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, Chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency’s exemption is written in law by the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the *Register* online at [www.azsos.gov/rules](http://www.azsos.gov/rules), click on the *Administrative Register* link.

Editor’s notes at the beginning of a Chapter provide information about rulemaking Sections made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

### PERSONAL USE/COMMERCIAL USE

This Chapter is posted as a public courtesy online, and is for private use only. Those who wish to use the contents for resale or profit should contact the Office about Commercial Use fees. For information on commercial use fees review A.R.S. § 39-121.03 and 1 A.A.C. 1, R1-1-113.

The minimum size lot approved by the Department will be governed largely by the area necessary for the safe accommodation of individual wells and/or sewage disposal systems. Where both the water supply and sewage disposal system must be developed on the same lot, the minimum size shall be at least one acre, excluding streets, alleys and other rights-of-way. Where water from a central system is provided for residential uses, the lot shall be sufficient to accommodate the sewage disposal system and provide for at least 100 percent expansion of the system based on a four-bedroom house within the bounds of the property allowing a minimum of five feet distance to the property lines. Where lots are zoned for commercial uses, the lot shall be sufficient to accommodate the sewage disposal system and provide for at least 100 percent expansion of the system within the bounds of the property allowing a minimum of five feet distance to the property lines.

**Historical Note**

Former Section R9-8-1014 renumbered without change as Section R18-5-404 (Supp. 89-2).

**R18-5-405. Responsibility of subdivider**

Where the owner of a subdivision, or other interested person, firm, company or corporation, proposes to develop a source or sources of supply and to construct a distribution system to furnish water to the subdivision, either free or for charge, complete details of the proposed water system including plans and specifications shall be furnished. Department approval of the supply and proposed system shall first be obtained before an approval for the sale of lots will be granted. The installation of such facilities shall be in accordance with the plans, and any revisions thereof, approved by the Department.
- D. Proposed water supply and distribution systems shall comply with 18 A.A.C. 4, Articles 1 and 2, except those distribution lines which are a common element of a condominium shall be exempt.
- E. Where water from an approved public water system is proposed for use in a subdivision, the Department shall issue a Certificate of Approval for Sanitary Facilities for a Subdivision only if the applicant has complied with subsections (A) and (B) and the public water system is either:

  - 2. Making satisfactory progress toward compliance with the provisions of 18 A.A.C. 4, Article 2 under a schedule approved by the Department.
- F. The Department shall revoke the Certificate of Approval for Sanitary Facilities for a Subdivision and notify the Department of Real Estate of such action if the public water system in use by the subdivision is creating an environmental nuisance pursuant to A.R.S. § 49-141 and is neither:

A letter, from the community or private collection company, stating that the collection service will be made available to the subdivision, is required.
- C. Where refuse collection service is not available, it will be the responsibility of the subdivider to notify each purchaser or tenant that the hauling of all refuse is an individual responsibility and that all refuse must be properly stored pending removal and disposed of at disposal areas specified in the plan approved by the Department.
- D. Where a collection service or an existing approved disposal area is not available to the subdivision, a plan approval will not be granted unless a separate disposal area is provided by the subdivider or arrangements are made to utilize a new, conveniently located disposal area. Such arrangements shall include, but not be limited to, the written permission of the person responsible for the operation of the new site.

**R18-5-501. Siting Requirements**

To the extent practicable, a new public water system or an extension to an existing public water system shall be geographically located to avoid a site which is:

1. Subject to a significant risk from earthquakes, floods, fires, or other disasters which could cause a breakdown of the public water system or portion thereof; or
2. Within the flood plain of a 100-year flood, except for intake structures and properly protected wells.

**Historical Note**

Section recodified from R18-4-501 at 10 A.A.R. 585, effective January 30, 2004 (Supp. 04-1).

**R18-5-502. Minimum Design Criteria**

- A.** A public water system shall be designed using good engineering practices. A public water system which is designed in a manner consistent with the criteria contained in Engineering Bulletin No. 10, "Guidelines for the Construction of Water Systems," issued by the Arizona Department of Health Services, May 1978 (and no future editions), which is incorporated herein by reference and on file with the Office of the Secretary of State, shall be considered to have been designed using good engineering practices. Other system designs shall be approved if the applicant can demonstrate that the system will function properly and may be operated reliably in compliance with this Chapter. Minimum design criteria which are not subject to modification are listed in this Section.

- B.** A potable water distribution system shall be designed to maintain and shall maintain a pressure of at least 20 pounds per square inch at ground level at all points in the distribution system under all conditions of flow.
- C.** Water and sewer mains shall be separated in order to protect public water systems from possible contamination. All distances are measured perpendicularly from the outside of the sewer main to the outside of the water main. Separation requirements are as follows:
1. A water main shall not be placed:
    - a. Within 6 feet, horizontal distance, and below 2 feet, vertical distance, above the top of a sewer main unless extra protection is provided. Extra protection shall consist of constructing the sewer main with mechanical joint ductile iron pipe or with slip-joint ductile iron pipe if joint restraint is provided. Alternate extra protection shall consist of encasing both the water and sewer mains in at least 6 inches of concrete for at least 10 feet beyond the area covered by this subsection (C)(1)(a).
    - b. Within 2 feet horizontally and 2 feet below the sewer main.
  2. No water pipe shall pass through or come into contact with any part of a sewer manhole. The minimum horizontal separation between water mains and manholes shall be 6 feet, measured from the center of the manhole.
  3. The minimum separation between force mains or pressure sewers and water mains shall be 2 feet vertically and 6 feet horizontally under all conditions. Where a sewer force main crosses above or less than 6 feet below a water line, the sewer main shall be encased in at least 6 inches of concrete or constructed using mechanical joint ductile iron pipe for 10 feet on either side of the water main.
  4. The separation requirements do not apply to building, plumbing, or individual house service connections.
  5. Sewer mains (gravity, pressure, and force) shall be kept a minimum of 50 feet from wells unless the following conditions are met:
    - a. Water main pipe, pressure tested in place to 50 psi without excessive leakage, is used for gravity sewers at distances greater than 20 feet from water wells; or
    - b. Water main pipe, pressure tested in place to 150 psi without excessive leakage, is used for pressure sewers and force mains at distances greater than 20 feet from water wells. "Excessive leakage" means any amount of leakage which is greater than that permitted under the AWWA Standard applicable to the particular pipe material or valve type.
  6. Requests for authorization to use alternate construction techniques, materials, and joints shall be reviewed by the Department, and such requests may be approved on a case-by-case basis.
- D.** A public water system shall not construct or add to its system a well which is located:
1. Within 50 feet from existing sewers unless the sewer main has been constructed in accordance with subsection (C)(5)(a) or (b) of this Section;
  2. Within 100 feet of any existing septic tank or subsurface disposal system;
  3. Within 100 feet of a discharge or activity which is required to obtain an Individual Aquifer Protection Permit, pursuant to A.R.S. §§ 49-241(A) through 49-251;
  4. Within 100 feet of an underground storage tank as defined in A.R.S. § 49-1001; or

**R18-5-503. Storage Requirements**

- A. The minimum storage capacity for a CWS or a noncommunity water system that serves a residential population or a school shall be equal to the average daily demand during the peak month of the year. Storage capacity may be based on existing consumption and phased as the water system expands.
- B. The minimum storage capacity for a multiple-well system for a CWS or a noncommunity water system that serves a residential population or a school may be reduced by the amount of the total daily production capacity minus the production from the largest producing well.

**Historical Note**

- B. A person shall not start to construct a new public water system, modify an existing facility, including an extension to an existing public water system, or make an alteration that will affect the treatment, capacity, water quality, flow, distribution, or operational performance of a public water system before receiving an Approval to Construct from the Department. Designing or consulting engineers may confer with the Department before proceeding with detailed designs of complex or innovative facilities. The following provisions shall apply:
1. An application for Approval to Construct, including the following documents and data, shall be submitted to the Department:

- to be done, and establishes the adequacy of the design to meet the system demand;
  - d. Analyses of a proposed new source of water that include:
    - i. Microbiological; physical; radiochemical; inorganic, organic, and volatile organic chemicals; and
    - ii. Microscopic particulates if the source meets the criteria of R18-4-301.01(A); and
  - e. Other pertinent data required to evaluate the application for Approval to Construct.
2. All plans, specifications, and design reports submitted for a public water system shall be prepared by, or under the supervision of, a professional engineer registered in Arizona and have the seal and signature of the engineer affixed to them, except that an engineer not registered in Arizona may design a water treatment plant or additions, modifications, revisions, or extensions, which include extensions to potable water distribution systems, if the total cost of the construction does not exceed \$12,500 for material, equipment, and labor, as verified by a cost estimate submitted with plan documents.
  3. An existing public water system shall be exempt from the plan review requirements of this Article if the public water system is in compliance with this Chapter or is making satisfactory progress towards compliance under a schedule approved by the Department if the applicable structural revision, addition, extension, or modification:
    - a. Has a project cost of \$12,500 or less; or
    - b. Is made to a water line that:
      - i. Is not for a subdivision requiring plat approval by a city, town, or county;
      - ii. Has a project cost of more than \$12,500 but less than \$50,000; and
      - iii. Has a design that is sealed and signed by a professional engineer registered in Arizona and the construction of which is reviewed for conformance with the design by a professional engineer registered in Arizona.
  4. Upon completion of a project exempt from the plan review requirements of this Article pursuant to subsection (B)(3), the public water system shall submit a notice of compliance which contains:
    - a. A fair market value cost estimate for the project,
    - b. The name of the design engineer and the review engineer, and
    - c. The project completion date and the total construction time.
  - C. The Department shall act upon a complete Approval to Construct application submitted for approval within 30 days after its receipt.
  - D. The Department shall issue an Approval to Construct only when the following conditions have been met:
    1. Plans and specifications submitted to the Department demonstrate that the proposed public water system reasonably can be expected to comply with this Chapter, including the MCLs in Article 2; and
    2. The water system is in compliance with this Chapter or reasonably can be expected to return to compliance with this Chapter as a result of the proposed construction.
  - E. An Approval to Construct becomes void if an extension of time is not granted by the Department within 90 days after the passage of one of the following:

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 5. DEPARTMENT OF ENVIRONMENTAL QUALITY - ENVIRONMENTAL REVIEWS AND CERTIFICATION

1. Construction does not begin within one year after the date the Approval to Construct is issued, or
2. There is a halt in construction of more than one year, or
3. Construction is not completed within three years after the date construction begins.

**Historical Note**

Section recodified from R18-4-505 at 10 A.A.R. 585, effective January 30, 2004 (Supp. 04-1).

**R18-5-506. Compliance with Approved Plans**

- B. The Department shall not issue an Approval of Construction on a newly constructed public water system, an extension to an existing public water system, or any alteration of an existing public water system that affects its treatment, capacity, water quality, flow, distribution, or operational performance unless the following requirements have been met:
  1. A professional engineer registered in Arizona or a person under the direct supervision of a professional engineer registered in Arizona, has completed a final inspection and submitted a Certificate of Completion on a form approved by the Department to which the seal and signature of the professional engineer registered in Arizona have been affixed;
  2. The construction conforms to approved plans and specifications, as indicated in the Certificate of Completion, and all changes have been documented by the submission of record drawings under R18-5-508;

  1. The public water system notifies the Department at least seven days before beginning construction on a public water system installation, change, or addition that is authorized by an Approval to Construct; and
  2. The public water system notifies the Department of completion of construction at least 10 working days before the expected completion date.

**Historical Note**

Section recodified from R18-4-507 at 10 A.A.R. 585, effective January 30, 2004 (Supp. 04-1).

**R18-5-508. Record Drawings**

## PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), Administrative Rules Division, accepts state agency rule notice and other legal filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the *Administrative Code*. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director  
ADMINISTRATIVE RULES DIVISION

### RULES

The definition for a rule is provided for under A.R.S. § 41-1001. “‘Rule’ means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency.”

### THE ADMINISTRATIVE CODE

The *Arizona Administrative Code* is where the official rules of the state of Arizona are published. The *Code* is the official codification of rules that govern state agencies, boards, and commissions.

The *Code* is separated by subject into Titles. Titles are divided into Chapters. A Chapter includes state agency rules. Rules in Chapters are divided into Articles, then Sections. The “R” stands for “rule” with a sequential numbering and lettering outline separated into subsections.

Rules are codified quarterly in the *Code*. Supplement release dates are printed on the footers of each Chapter.

First Quarter: January 1 - March 31  
Second Quarter: April 1 - June 30  
Third Quarter: July 1 - September 30  
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2022 is cited as Supp. 22-1. Supplements are traditionally released three to four weeks after the end of the quarter because filings are accepted until the last day of the quarter.

Please note: The Office publishes by Chapter, not by individual rule Section. Therefore there might be only a few Sections codified in each Chapter released in a supplement. This is why the Office lists only updated codified Sections on the previous page.

### RULE HISTORY

Refer to the HISTORICAL NOTE at the end of each Section for the effective date of a rule. The note also includes the *Register* volume and page number in which the notice was published (A.A.R.) and beginning in supplement 21-4, the date the notice was published in the *Register*.

### AUTHENTICATION OF PDF CODE CHAPTERS

The Office began to authenticate Chapters of the *Code* in Supp. 18-1 to comply with A.R.S. §§ 41-1012(B) and A.R.S. § 41-5505.

A certification verifies the authenticity of each *Code* Chapter posted as it is released by the Office of the Secretary of State. The authenticated pdf of the *Code* includes an integrity mark with a certificate ID. Users should check the validity of the signature, especially if the pdf has been downloaded. If the digital signature is invalid it means the document’s content has been compromised.

### HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the *Arizona Administrative Register* for recent updates to rule Sections.

### ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature’s website, [www.azleg.gov](http://www.azleg.gov). An agency’s authority note to make rules is often included at the beginning of a Chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

### SESSION LAW REFERENCES

Arizona Session Law references in a Chapter can be found at the Secretary of State’s website, [www.azsos.gov](http://www.azsos.gov) under Services-> Legislative Filings.

### EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt from the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, Chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency’s exemption is written in law by the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the *Register* online at [www.azsos.gov/rules](http://www.azsos.gov/rules), click on the *Administrative Register* link.

Editor’s notes at the beginning of a Chapter provide information about rulemaking Sections made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

### PERSONAL USE/COMMERCIAL USE

This Chapter is posted as a public courtesy online, and is for private use only. Those who wish to use the contents for resale or profit should contact the Office about Commercial Use fees. For information on commercial use fees review A.R.S. § 39-121.03 and 1 A.A.C. 1, R1-1-113.

In addition to the definitions established in A.R.S. § 49-301, the following terms apply to this Chapter:

1. "Agricultural use pesticide" means any pesticide intended for use directly on a crop. An agricultural use pesticide does not include animal pesticide cartags or pesticides intended solely for use within and around a confined structure.
2. "Crop" means any plant, animal, plant product, or animal product produced for commercial or research purposes.
3. "Data generator" means any person providing information to support the registration in this state of an agricultural use pesticide in accordance with A.R.S. § 49-302(A).
4. "EPA" means the United States Environmental Protection Agency.
5. "Formulator" means any person who purchases an EPA-registered pesticide to reformulate or repack and register the pesticide for sale in this state.
6. "Label" means the written, printed, or graphic matter on, or attached to, the pesticide container, and the outside container or wrapper of the retail package, if any, of the pesticide.
7. "Pest" means any weed, insect, vertebrate pest, nematode, fungus, virus, bacteria, or other pathogenic organism, or any other form of terrestrial or aquatic plant or animal life, except virus, bacteria, or other microorganism on or in living humans or other living animals, that is declared a pest by the Director of the Arizona Department of Agriculture.
8. "Soil-applied" means an agricultural use pesticide intended for application to or injection into the soil by ground-based application equipment or chemigation, or the label of the pesticide requires or recommends that the application is followed within 72 hours by flood or furrow irrigation.

**Historical Note**

Adopted effective May 10, 1988 (Supp. 88-2). Amended effective September 23, 1992 (Supp. 92-3). Amended by final rulemaking at 11 A.A.R. 3949, effective November 22, 2005 (Supp. 05-3).

**R18-6-102. Agricultural Use Pesticide Submittal Requirements****A. Pre-registration data requirements for new agricultural use pesticides.**

1. Before registering a new agricultural use pesticide under A.R.S. § 3-351, an applicant shall submit information that enables the Department to determine whether the new agricultural use pesticide has the potential to pollute groundwater in the state. This information shall include:
  - a. A transmittal letter;
  - b. The following information on a Data Summary form obtained from the Department:
    - i. The company name and address;
    - ii. The name and contact information of the person making the submittal;
    - iii. The date of filing;
    - iv. The product information, including the brand name, EPA registration number, formulation category, and intended use; and

- v. The active ingredient technical name, Chemical Abstract Service (CAS) number, common name, molecular weight, and bulk density; and
- c. The following information for each active ingredient:
  - i. Water solubility;
  - ii. Vapor pressure;
  - iii. Octanol-water partition coefficient;
  - iv. Soil adsorption coefficient;
  - v. Henry's law constant;
  - vi. Dissipation studies, including hydrolysis, photolysis, aerobic and anaerobic soil metabolism, and field dissipation, performed under conditions in Arizona, or similar environmental and use conditions, if that information exists in studies and conclusions from other states or the United States government. The studies shall, at a minimum, meet EPA testing methods and reporting guidelines.

**2. The applicant may submit the following alternate information:**

- a. Upon Director approval, alternate information to satisfy one or more of the data requirements in subsection (A)(1)(c). The alternate information shall accurately describe the relevant data required for each new agricultural use pesticide active ingredient under conditions in Arizona or under similar environmental and use conditions;
- b. California registration.
  - i. Evidence that the California Department of Food and Agriculture registered the agricultural use pesticide following the data requirements under California Food and Agricultural Code Section 13143; and
  - ii. Documentation showing that required studies were performed under environmental and use conditions that are similar to those conditions in Arizona.

**3. Waiver. The Director may waive some or all of the information required in subsection (A)(1)(c) if the applicant demonstrates that:**

- a. Due to the nature of the active ingredient, it is not scientifically possible to obtain meaningful results for the specified tests; or
- b. Due to the application or cultural practices for the active ingredient, it is not necessary to obtain some or all of the information.

**B. Pre-registration data submittal completeness.**

1. The Department shall notify the Arizona Department of Agriculture when the applicant submits all the information on the active ingredient required under subsection (A) and the Director has concluded that the information is sufficient to determine whether the active ingredient has the potential to pollute groundwater of the state.
2. If the Director cannot determine that the data submittal requirements for agricultural use registration in Arizona have been met, the person may apply for a conditional registration under A.R.S. § 49-310.

**C. Information submittal for the product chemistry and environmental fate assessment evaluation. After satisfying the data submittal required in subsection (A) and registering the pesticide with the Arizona Department of Agriculture:**

## TITLE 18. ENVIRONMENTAL QUALITY

## PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), Administrative Rules Division, accepts state agency rule notice and other legal filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the *Administrative Code*. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director  
ADMINISTRATIVE RULES DIVISION

### RULES

The definition for a rule is provided for under A.R.S. § 41-1001. “‘Rule’ means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency.”

### THE ADMINISTRATIVE CODE

The *Arizona Administrative Code* is where the official rules of the state of Arizona are published. The *Code* is the official codification of rules that govern state agencies, boards, and commissions.

The *Code* is separated by subject into Titles. Titles are divided into Chapters. A Chapter includes state agency rules. Rules in Chapters are divided into Articles, then Sections. The “R” stands for “rule” with a sequential numbering and lettering outline separated into subsections.

Rules are codified quarterly in the *Code*. Supplement release dates are printed on the footers of each Chapter.

First Quarter: January 1 - March 31  
Second Quarter: April 1 - June 30  
Third Quarter: July 1 - September 30  
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2022 is cited as Supp. 22-1. Supplements are traditionally released three to four weeks after the end of the quarter because filings are accepted until the last day of the quarter.

Please note: The Office publishes by Chapter, not by individual rule Section. Therefore there might be only a few Sections codified in each Chapter released in a supplement. This is why the Office lists only updated codified Sections on the previous page.

### RULE HISTORY

Refer to the HISTORICAL NOTE at the end of each Section for the effective date of a rule. The note also includes the *Register* volume and page number in which the notice was published (A.A.R.) and beginning in supplement 21-4, the date the notice was published in the *Register*.

### AUTHENTICATION OF PDF CODE CHAPTERS

The Office began to authenticate Chapters of the *Code* in Supp. 18-1 to comply with A.R.S. §§ 41-1012(B) and A.R.S. § 41-5505.

A certification verifies the authenticity of each *Code* Chapter posted as it is released by the Office of the Secretary of State. The authenticated pdf of the *Code* includes an integrity mark with a certificate ID. Users should check the validity of the signature, especially if the pdf has been downloaded. If the digital signature is invalid it means the document’s content has been compromised.

### HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the *Arizona Administrative Register* for recent updates to rule Sections.

### ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature’s website, [www.azleg.gov](http://www.azleg.gov). An agency’s authority note to make rules is often included at the beginning of a Chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

### SESSION LAW REFERENCES

Arizona Session Law references in a Chapter can be found at the Secretary of State’s website, [www.azsos.gov](http://www.azsos.gov) under Services-> Legislative Filings.

### EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt from the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, Chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency’s exemption is written in law by the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the *Register* online at [www.azsos.gov/rules](http://www.azsos.gov/rules), click on the *Administrative Register* link.

Editor’s notes at the beginning of a Chapter provide information about rulemaking Sections made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

### PERSONAL USE/COMMERCIAL USE

This Chapter is posted as a public courtesy online, and is for private use only. Those who wish to use the contents for resale or profit should contact the Office about Commercial Use fees. For information on commercial use fees review A.R.S. § 39-121.03 and 1 A.A.C. 1, R1-1-113.

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

**ARTICLE 1. WATER QUALITY STANDARDS FOR SURFACE WATERS****R18-11-101. Definitions**

The following terms apply to this Article:

1. "Acute toxicity" means toxicity involving a stimulus severe enough to induce a rapid response. In aquatic toxicity tests, an effect observed in 96 hours or less is considered acute.
2. "Agricultural irrigation (AgI)" means the use of a surface water for crop irrigation.
3. "Agricultural livestock watering (AgL)" means the use of a surface water as a water supply for consumption by livestock.
4. "Annual mean" is the arithmetic mean of monthly values determined over a consecutive 12-month period, provided that monthly values are determined for at least three months. A monthly value is the arithmetic mean of all values determined in a calendar month.
5. "Aquatic and wildlife (cold water) (A&Wc)" means the use of a surface water by animals, plants, or other cold-water organisms, generally occurring at an elevation greater than 5000 feet, for habitation, growth, or propagation.
6. "Aquatic and wildlife (effluent-dependent water) (A&Wedw)" means the use of an effluent-dependent water by animals, plants, or other organisms for habitation, growth, or propagation.
7. "Aquatic and wildlife (ephemeral) (A&We)" means the use of an ephemeral water by animals, plants, or other organisms, excluding fish, for habitation, growth, or propagation.
8. "Aquatic and wildlife (warm water) (A&Ww)" means the use of a surface water by animals, plants, or other warm-water organisms, generally occurring at an elevation less than 5000 feet, for habitation, growth, or propagation.

12. "Complete Mixing" means the location at which concentration of a pollutant across a transect of a surface water differs by less than five percent.
13. "Criteria" means elements of water quality standards that are expressed as pollutant concentrations, levels, or narrative statements representing a water quality that supports a designated use.
14. "Critical flow conditions of the discharge" means the hydrologically based discharge flow averages that the director uses to calculate and implement applicable water quality criteria to a mixing zone's receiving water as follows:
  - a. For acute aquatic water quality standard criteria, the discharge flow critical condition is represented by the maximum one-day average flow analyzed over a reasonably representative timeframe.
  - b. For chronic aquatic water quality standard criteria, the discharge flow critical flow condition is represented by the maximum monthly average flow analyzed over a reasonably representative timeframe.
  - c. For human health based water quality standard criteria, the discharge flow critical condition is the long-term arithmetic mean flow, averaged over several years so as to simulate long-term exposure.
15. "Critical flow conditions of the receiving water" means the hydrologically based receiving water low flow averages that the director uses to calculate and implement applicable water quality criteria:
  - a. For acute aquatic water quality standard criteria, the receiving water critical condition is represented as the lowest one-day average flow event expected to occur once every ten years, on average (1Q10).
  - b. For chronic aquatic water quality standard criteria, the receiving water critical flow condition is represented as the lowest seven-consecutive-day average flow expected to occur once every 10 years, on average (7Q10), or
  - c. For human health based water quality standard criteria, in order to simulate long-term exposure, the receiving water critical flow condition is the harmonic mean flow.

19. "Effluent-dependent water (EDW)" means a surface water or portion of a surface water, that consists of a point source discharge without which the surface water would be ephemeral. An effluent-dependent water may be perennial or intermittent depending on the volume and frequency of the point source discharge of treated wastewater.
20. "Ephemeral water" means a surface water or portion of surface water that flows or pools only in direct response to precipitation.
21. "Existing use" means a use attained in the waterbody on or after November 28, 1975, whether or not it is included in the water quality standards.
22. "Fish consumption (FC)" means the use of a surface water by humans for harvesting aquatic organisms for consumption. Harvestable aquatic organisms include, but are not limited to, fish, clams, turtles, crayfish, and frogs.
23. "Full-body contact (FBC)" means the use of a surface water for swimming or other recreational activity that causes the human body to come into direct contact with the water to the point of complete submergence. The use is such that ingestion of the water is likely and sensitive body organs, such as the eyes, ears, or nose, may be exposed to direct contact with the water.
24. "Geometric mean" means the  $n$ th root of the product of  $n$  items or values. The geometric mean is calculated using the following formula:
 
$$GM_Y = \sqrt[n]{(Y_1)(Y_2)(Y_3) \dots (Y_n)}$$
25. "Hardness" means the sum of the calcium and magnesium concentrations, expressed as calcium carbonate (CaCO<sub>3</sub>) in milligrams per liter.

**R18-11-103. Repealed****Historical Note**

Adopted effective February 18, 1992 (Supp. 92-1). Repealed effective April 24, 1996 (Supp. 96-2).

**R18-11-104. Designated Uses**

- A. The Director shall adopt or remove a designated use or subcategory of a designated use by rule.
- B. Designated uses of a surface water may include full-body contact, partial-body contact, domestic water source, fish consumption, aquatic and wildlife (cold water), aquatic and wildlife (warm water), aquatic and wildlife (ephemeral), aquatic and wildlife (effluent-dependent water), agricultural irrigation, and agricultural livestock watering. The designated uses for specific surface waters are listed in Appendix B of this Article.
- C. Numeric water quality criteria to maintain and protect water quality for the designated uses are prescribed in Appendix A, R18-11-109, R18-11-110, and R18-11-112. Narrative water quality standards to protect all surface waters are prescribed in R18-11-108.
- D. If a surface water has more than one designated use listed in Appendix B, the most stringent water quality criterion applies.
- E. The Director shall revise the designated uses of a surface water if water quality improvements result in a level of water quality that permits a use that is not currently listed as a designated use in Appendix B.
- F. In designating uses of a surface water and in establishing water quality criteria to protect the designated uses, the Director shall take into consideration the applicable water quality standards for downstream surface waters and shall ensure that the water quality standards that are established for an upstream surface water also provide for the attainment and maintenance of the water quality standards of downstream surface waters.
- G. A use attainability analysis shall be conducted prior to removal of a designated use or adoption of a subcategory of a designated use that requires less stringent water quality criteria.
- H. The Director may remove a designated use or adopt a subcategory of a designated use that requires less stringent water quality criteria, provided the designated use is not an existing use and it is demonstrated through a use attainability analysis that attaining the designated use is not feasible for any of the following reasons:
  1. A naturally-occurring pollutant concentration prevents the attainment of the use;
  2. A natural, ephemeral, intermittent, or low-flow condition or water level prevents the attainment of the use;
  3. A human-caused condition or source of pollution prevents the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place;
  4. A dam, diversion, or other type of hydrologic modification precludes the attainment of the use, and it is not feasible to restore the surface water to its original condition or to operate the modification in a way that would result in attainment of the use;
  5. A physical condition related to the natural features of the surface water, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, precludes attainment of an aquatic life designated use; or
  6. Controls more stringent than those required by § 301 (b) and § 306 of the Clean Water Act [33 U.S.C. § 1311 and § 1316] are necessary to attain the use and implementation

of the controls would result in substantial and widespread economic and social impact.

**Historical Note**

Adopted effective February 18, 1992 (Supp. 92-1).

Amended effective April 24, 1996 (Supp. 96-2).

**R18-11-105. Tributaries; Designated Uses**

The following water quality standards apply to a surface water that is not listed in Appendix B but that is a tributary to a listed surface water.

1. The aquatic and wildlife (ephemeral) and partial-body contact standards apply to an unlisted tributary that is an ephemeral water.
2. The aquatic and wildlife (cold water), full-body contact, and fish consumption standards apply to an unlisted tributary that is a perennial or intermittent surface water and is above 5000 feet in elevation.
3. The aquatic and wildlife (warm water), full-body contact, and fish consumption standards apply to an unlisted tributary that is a perennial or intermittent surface water and is below 5000 feet in elevation.

**Historical Note**

Adopted effective April 24, 1996 (Supp. 96-2). Section heading amended per instructions of the Department of Environmental Quality, August 9, 1996 (Supp. 96-3). Amended by final rulemaking at 8 A.A.R. 1264, effective March 8, 2002 (Supp. 02-1).

**R18-11-106. Net Ecological Benefit**

- A. The Director may, by rule, modify a water quality standard on the ground that there is a net ecological benefit associated with the discharge of effluent to support or create a riparian and aquatic habitat in an area where water resources are limited. The Director may modify a water quality standard for a pollutant if it is demonstrated that:
  1. The discharge of effluent creates or supports an ecologically valuable aquatic, wetland, or riparian ecosystem in an area where these resources are limited;
  2. The ecological benefits associated with the discharge of effluent under a modified water quality standard exceed the environmental costs associated with the elimination of the discharge of effluent;
  3. The cost of treatment to achieve compliance with a water quality standard is so high that it is more cost effective to eliminate the discharge of effluent to the surface water. The discharger shall demonstrate that it is feasible to eliminate the discharge of effluent that creates or supports the ecologically valuable aquatic, wetland, or riparian ecosystem;
  4. The discharge of effluent to the surface water will not cause or contribute to a violation of a water quality standard that has been established for a downstream surface water;
  5. All practicable point source discharge control programs, including local pretreatment, waste minimization, and source reduction programs are implemented; and
  6. The discharge of effluent does not produce or contribute to the concentration of a pollutant in the tissues of aquatic organisms or wildlife that is likely to be harmful to humans or wildlife through food chain concentration.
- B. The Director shall not modify a water quality criterion for a pollutant to be less stringent than a technology-based effluent

limitation that applies to the discharge of that effluent. The discharge of effluent shall, at a minimum, comply with applicable technology-based effluent limitations.

**Historical Note**

Adopted effective April 24, 1996 (Supp. 96-2). Amended by final rulemaking at 8 A.A.R. 1264, effective March 8, 2002 (Supp. 02-1). Amended by final rulemaking at 22 A.A.R. 2328, effective August 2, 2016 (Supp. 16-4).

**R18-11-107. Antidegradation**

- A. The Director shall, using R18-11-107.01 and this Section, determine whether there is degradation of water quality in a surface water on a pollutant-by-pollutant basis.
- B. Tier 1: The level of water quality necessary to support an existing use shall be maintained and protected. No degradation of existing water quality is permitted in a surface water where the existing water quality does not meet the applicable water quality standards.
- C. Tier 2: Where existing water quality in a surface water is better than the applicable water quality standard the existing water quality shall be maintained and protected. The Director may allow degradation of existing water quality in the surface water, if the Director makes all of the following findings:
  1. The water quality necessary for existing uses is fully protected and water quality is not lowered to a level that does not comply with applicable water quality standards,
  2. The highest statutory and regulatory requirements for new and existing point sources are achieved,
  3. All cost-effective and reasonable best management practices for nonpoint source pollution control are implemented, and
  4. Allowing lower water quality is necessary to accommodate important economic or social development in the area where the surface water is located.
- D. Tier 3: Existing water quality shall be maintained and protected in a surface water that is classified as an OAW under R18-11-112. Degradation of an OAW under subsection (C) is prohibited.
- E. The Director shall implement this Section in a manner consistent with § 316 of the Clean Water Act [33 U.S.C. 1326] if a potential water quality impairment associated with a thermal discharge is involved.

**Historical Note**

Adopted effective February 18, 1992 (Supp. 92-1). Amended effective April 24, 1996 (Supp. 96-2). Amended by final rulemaking at 8 A.A.R. 1264, effective March 8, 2002 (Supp. 02-1). Amended by final rulemaking at 14 A.A.R. 4708, effective January 31, 2009 (Supp. 08-4).

**R18-11-107.01. Antidegradation Criteria**

- A. Tier 1 antidegradation protection.
  1. Tier 1 antidegradation protection applies to the following surface waters:
    - a. A surface water listed on the 303(d) list for the pollutant that resulted in the listing,
    - b. An effluent dependent water,
    - c. An ephemeral water,
    - d. An intermittent water, and
    - e. A canal listed in Appendix B.
  2. A regulated discharge shall not cause a violation of a surface water quality standard or a wasteload allocation in a total maximum daily load approved by EPA.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

3. Except as provided in subsections (E) and (F), Tier 1 antidegradation review requirements are satisfied for a point-source discharge regulated under an individual AZPDES permit to an ephemeral water, effluent dependent water, intermittent water, or a canal listed in Appendix B, if water quality-based effluent limitations designed to achieve compliance with applicable surface water quality standards are established in the permit and technology-based requirements of the Clean Water Act for the point source discharge are met.

**B. Tier 2 antidegradation protection.**

1. Tier 2 antidegradation protection applies to a perennial water with existing water quality that is better than applicable water quality standards. A perennial water that is not listed in subsection (A)(1) nor classified as an OAW under A.A.C. R18-9-112(G) has Tier 2 antidegradation protection for all pollutants of concern.
2. A regulated discharge that meets the following criteria, at critical flow conditions, does not cause significant degradation:
  - a. The regulated discharge consumes less than 20 percent of the available assimilative capacity for each pollutant of concern, and
  - b. At least 50 percent of the assimilative capacity for each pollutant of concern remains available in the surface water for each pollutant of concern.
3. Antidegradation review. Any person proposing a new or expanded regulated discharge under an individual AZPDES permit that may cause significant degradation shall provide ADEQ with the following information:
  - a. Baseline characterization. A person seeking authorization to discharge under an individual AZPDES permit to a perennial water shall provide baseline water quality data on pollutants of concern where no data exists or there are insufficient data to characterize baseline water quality and to determine available assimilative capacity. A discharger shall characterize baseline water quality at a location upstream of the proposed discharge location;
  - b. Alternative analysis.
    - i. The person seeking authorization for the discharge shall prepare and submit a written analysis of alternatives to the discharge. The analysis shall provide information on all reasonable, cost-effective, less-degrading or non-degrading discharge alternatives. Alternatives may include wastewater treatment process changes or upgrades, pollution prevention measures, source reduction, water reclamation, alternative discharge locations, groundwater recharge, land application or treatment, local pretreatment programs, improved operation and maintenance of existing systems, seasonal or controlled discharge to avoid critical flow conditions, and zero discharge;
    - ii. The alternatives analysis shall include cost information on base pollution control measures associated with the regulated discharge and cost information for each alternative;
    - iii. The person shall implement the alternative that is cost-effective and reasonable, results in the least degradation, and is approved by the Director. An alternative is cost-effective and reasonable if treatment costs associated with the

alternative are less than a 10 percent increase above the cost of base pollution control measures;

- iv. For purposes of this subsection, "base pollution control measures" are water pollution control measures required to meet technology-based requirements of the Clean Water Act and water quality-based effluent limits designed to achieve compliance with applicable water quality standards; and

- c. Social and economic justification. The person shall demonstrate to the Director that significant degradation is necessary to accommodate important economic or social development in the local area. The person seeking authorization for the discharge shall prepare a written social and economic justification that includes a description of the following:

- i. The geographic area where significant degradation of existing water quality will occur;
- ii. The current baseline social and economic conditions in the local area;
- iii. The net positive social and economic effects of development associated with the regulated discharge and allowing significant degradation;
- iv. The negative social, environmental, and economic effects of allowing significant degradation of existing water quality; and
- v. Alternatives to the regulated discharge that do not significantly degrade water quality yet may yield comparable social and economic benefits.

4. For purposes of this Section, the term "pollutant of concern" means a pollutant with either a numeric or narrative water quality standard.

5. Public participation. The Director shall provide public notice and an opportunity to comment on an antidegradation review under subsection (B)(3) and shall provide an opportunity for a public hearing under A.A.C. R18-9-A908(B).

**C. Tier 3 antidegradation protection.**

1. Tier 3 antidegradation protection applies only to an OAW listed in R18-11-112(G).
2. A new or expanded point-source discharge directly to an OAW is prohibited.
3. A person seeking authorization for a regulated discharge to a tributary to, or upstream of, an OAW shall demonstrate in a permit application or in other documentation submitted to ADEQ that the regulated discharge will not degrade existing water quality in the downstream OAW.
4. A discharge regulated under a § 404 permit that may affect existing water quality of an OAW requires a determination by the Director to ensure that existing water quality is maintained and protected and any water quality impacts are temporary. Temporary water quality impacts are those impacts that occur for a period of six months or less and are not regularly occurring. The form of such a determination shall be as follows:
  - a. For Corps-issued § 404 permits, an individual § 401 water quality certification.
  - b. For Director-issued § 404 permits, a § 404 permit action, wherein the Director shall conduct a water quality evaluation as a part of the state's requirements for issuing § 404 permits and in accordance with this Section.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

**D.** Antidegradation review of a § 404 permit shall be conducted as follows:

1. For a Corps-issued § 404 permit. The Director shall conduct the antidegradation review of any discharge authorized under a nationwide or regional § 404 permit as part of the § 401 water quality certification prior to issuance of the nationwide or regional permit. The Director shall conduct the antidegradation review of an individual § 404 permit if the discharge may degrade existing water quality in an OAW or a water listed on the 303(d) List of impaired waters. For regulated discharges that may degrade water quality in an OAW or a water that is on the 303(d) List of impaired waters, the Director shall conduct the antidegradation review as part of the § 401 water quality certification process.
2. For a Director-issued § 404 permit. The Director shall conduct the antidegradation review of any discharge authorized under a general § 404 permit as a part of its determination whether to issue a general permit in accordance with state requirements for issuing a § 404 general permit and with this Section. The Director shall conduct the antidegradation review of an individual § 404 permit as part of the § 404 permit action in accordance with state requirements for issuing a § 404 permit and in accordance with this Section.

**E.** Antidegradation review of an AZPDES stormwater permit. An individual stormwater permit for a municipal separate storm sewer system (MS4) meets antidegradation requirements if the permittee complies with the permit, including developing a stormwater management plan containing controls that reduce the level of pollutants in stormwater discharges to the maximum extent practicable.**F.** Antidegradation review of a general permit. The Director shall conduct the antidegradation review of a regulated discharge authorized by a general permit at the time the general permit is issued or renewed. A person seeking authorization to discharge under a general permit is not required to undergo an individual antidegradation review at the time the Notice of Intent is submitted unless the discharge may degrade existing water quality in an OAW or a water listed on the 303(d) List of impaired waters.**Historical Note**

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

- D. Suspended sediment concentration.
- The following water quality standards for suspended sediment concentration, expressed in milligrams per liter (mg/L), are expressed as a median value determined from a minimum of four samples collected at least seven days apart:
- |  | 3.0° C | 3.0° C | 1.0° C |
|--|--------|--------|--------|
|  |        |        |        |
- The Director shall not use the results of a suspended sediment concentration sample collected during or within 48 hours after a local storm event to determine the median value.
- E. Dissolved oxygen. A surface water meets the water quality standard for dissolved oxygen when either:
- The percent saturation of dissolved oxygen is equal to or greater than 90 percent, or
  - The single sample minimum concentration for the designated use, as expressed in milligrams per liter (mg/L) is as follows:

Designated Use	Single sample minimum concentration in mg/L
A&Ww	6.0
A&Wc	7.0
A&W edw for a sample taken from three hours after sunrise to sunset	3.0
A&W edw for a sample taken from sunset to three hours after sunrise	1.0

The single sample minimum concentration is the same for the designated use in a lake, but the sample must be taken from a depth no greater than one meter.

- F. Nutrient criteria. The following are water quality standards for total phosphorus and total nitrogen (expressed in milligrams per liter (mg/L)) that apply to the surface waters listed below. A minimum of 10 samples, each taken at least 10 days apart in a consecutive 12-month period, are required to determine a 90th percentile. Not more than 10 percent of the samples may exceed the 90th percentile value listed below. The Director will apply these water quality standards for total phosphorus and total nitrogen to the surface waters listed below, and to their perennial tributaries, if listed. The Director may also apply these total phosphorus and total nitrogen standards to any source discharging to any tributary (ephemeral, intermittent, effluent dependent water, or perennial) of the surface waters listed below, if necessary to protect nutrient water quality in the listed surface water, based on the volume, frequency, magnitude and duration of the discharge, and distance to the downstream surface water listed below:

**R18-11-112. Outstanding Arizona Waters**

- A. The Director shall classify a surface water as an outstanding Arizona water (OAW) by rule.
- B. The Director may adopt, under R18-11-115, a site-specific standard to maintain and protect existing water quality in an OAW.
- C. Any person may nominate a surface water for classification as an OAW by filing a nomination with the Director. The nomination shall include:
1. A map and a description of the surface water;

2. A written statement in support of the nomination, including specific reference to the applicable criteria for an OAW classification prescribed in subsection (D);
  3. Supporting evidence demonstrating that the criteria prescribed in subsection (D) are met; and
  4. Available water quality data relevant to establishing the baseline water quality of the proposed OAW.
- D. The Director may classify a surface water as an OAW based upon the following criteria:
1. The surface water is a perennial or intermittent water;
  2. The surface water is in a free-flowing condition. For purposes of this subsection, “in a free-flowing condition” means that a surface water does not have an impoundment, diversion, channelization, rip-rapping or other bank armor, or another hydrological modification within the reach nominated for an OAW classification;
  3. The surface water has good water quality. For purposes of this subsection, “good water quality” means that the surface water has water quality that meets or is better than applicable surface water quality standards. A surface water that is listed as impaired under R18-11-604(E) is ineligible for OAW classification; and
  4. The surface water meets one or both of the following conditions:
    - a. The surface water is of exceptional recreational or ecological significance because of its unique attributes, such as the geology, flora and fauna, water quality, aesthetic value, or the wilderness characteristic of the surface water;
    - b. An endangered or threatened species is associated with the surface water and the existing water quality is essential to the species' maintenance and propagation or the surface water provides critical habitat for the threatened or endangered species. An endangered or threatened species is identified in “Endangered and Threatened Wildlife,” 50 CFR 17.11 (revised 2005), and “Endangered and Threatened Plants,” 50 CFR 17.12 (revised 2005). This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 West Washington Street, Phoenix, Arizona 85007 or may be obtained from the National Archives and Records Administration at <http://www.access.gpo.gov/nara/cfr/cfr-table-search.html#page1>.
- E. The Director shall hold at least one public meeting in the local area of a surface water that is nominated for classification as an OAW to solicit public comment on the nomination.
- F. The Director shall consider the following factors when deciding whether to classify a surface water as an OAW:
1. Whether there is the ability to manage the surface water and its watershed to maintain and protect existing water quality;
  2. The social and economic impact of Tier 3 antidegradation protection;
  3. The public comments in support of, or in opposition to, an OAW classification;
  4. The timing of the nomination relative to the triennial review of surface water quality standards;
  5. The consistency of an OAW classification with applicable water quality management plans; and

- R18-11-113. Effluent-Dependent Waters**
- A.** The Director shall classify a surface water as an effluent-dependent water by rule.
  - B.** The Director may adopt, under R18-11-115, a site-specific water quality standard for an effluent-dependent water.
  - C.** Any person may submit a petition for rule adoption requesting that the Director classify a surface water as an effluent-dependent water. The petition shall include:
    1. A map and a description of the surface water;
    2. Information that demonstrates that the surface water consists of a point source discharge of wastewater; and
    3. Information that demonstrates that, without a point source discharge of a wastewater, the receiving water is an ephemeral water.
  - D.** The Director shall use the water quality standards that apply to an effluent-dependent water to derive water quality-based effluent limits for a point source discharge of wastewater to an ephemeral water.
  - E.** The Director may use aquatic and wildlife (edw) acute standards only to derive water quality based effluent limits for a sporadic, infrequent, or emergency point source discharge to an ephemeral water or to an effluent-dependent water. The Director shall consider the following factors when deciding whether to apply A&Wedw (acute) standards:
    1. The amount, frequency, and duration of the discharge;
    2. The length of time water may be present in the receiving water;
    3. The distance to a downstream water with aquatic and wildlife chronic standards; and
    4. The likelihood of chronic exposure to pollutants.
  - F.** The Director may establish alternative water quality-based effluent limits in an AZPDES permit based on seasonal differences in the discharge.
- Historical Note**
- Adopted effective February 18, 1992 (Supp. 92-1). Amended effective December 18, 1992 (Supp. 92-4). Amended effective April 24, 1996 (Supp. 96-2). Amended by final rulemaking at 8 A.A.R. 1264, effective March 8, 2002 (Supp. 02-1). Amended by final rulemaking at 14 A.A.R. 4708, effective January 31, 2009 (Supp. 08-4).
- R18-11-114. Mixing Zones**
- A.** The Director may establish a mixing zone for a point source discharge to a surface water as a condition of an individual AZPDES permit on a pollutant-by-pollutant basis. A mixing zone is prohibited in an ephemeral water or where there is no water for dilution, or as prohibited pursuant to subsection (H).
  - B.** The owner or operator of a point source seeking the establishment of a mixing zone shall submit a request to the Director

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

for a mixing zone as part of an application for an AZPDES permit. The request shall include:

1. An identification of the pollutant for which the mixing zone is requested;
  2. A proposed outfall design;
  3. A definition of the boundary of the proposed mixing zone. For purposes of this subsection, the boundary of a mixing zone is where complete mixing occurs; and
  4. A complete and detailed description of the existing physical, biological, and chemical conditions of the receiving water and the predicted impact of the proposed mixing zone on those conditions. The description shall also address the factors listed in subsection (D) that the Director must consider when deciding to grant or deny a request and shall address the mixing zone requirements in subsection (H).
- C.** The Director shall consider the following factors when deciding whether to grant or deny a request for a mixing zone:
1. The assimilative capacity of the receiving water;
  2. The likelihood of adverse human health effects;
  3. The location of drinking water plant intakes and public swimming areas;
  4. The predicted exposure of biota and the likelihood that resident biota will be adversely affected;
  5. Bioaccumulation;
  6. Whether there will be acute toxicity in the mixing zone, and, if so, the size of the zone of initial dilution;
  7. The known or predicted safe exposure levels for the pollutant for which the mixing zone is requested;
  8. The size of the mixing zone;
  9. The location of the mixing zone relative to biologically sensitive areas in the surface water;
  10. The concentration gradient of the pollutant within the mixing zone;
  11. Sediment deposition;
  12. The potential for attracting aquatic life to the mixing zone; and
  13. The cumulative impacts of other mixing zones and other discharges to the surface water.
- D.** Director determination.
1. The Director shall deny a request to establish a mixing zone if a water quality standard will be violated outside the boundaries of the proposed mixing zone.
  2. If the Director approves the request to establish a mixing zone, the Director shall establish the mixing zone as a condition of an AZPDES permit. The Director shall include any mixing zone condition in the AZPDES permit that is necessary to protect human health and the designated uses of the surface water.
- E.** Any person who is adversely affected by the Director's decision to grant or deny a request for a mixing zone may appeal the decision under A.R.S. § 49-321 et seq. and A.R.S. § 41-1092 et seq.
- F.** The Director shall reevaluate a mixing zone upon issuance, reissuance, or modification of the AZPDES permit for the point source or a modification of the outfall structure.
- G.** Mixing zone requirements.
1. A mixing zone shall be as small as practicable in that it shall not extend beyond the point in the waterbody at which complete mixing occurs under the critical flow conditions of the discharge and of the receiving water.
  2. The total horizontal area allocated to all mixing zones on a lake shall not exceed 10 percent of the surface area of the lake.
  3. Adjacent mixing zones in a lake shall not overlap or be located closer together than the greatest horizontal dimension of the largest mixing zone.
  4. The design of any discharge outfall shall maximize initial dilution of the wastewater in a surface water.
  5. The size of the zone of initial dilution in a mixing zone shall prevent lethality to organisms passing through the zone of initial dilution. The mixing zone shall prevent acute toxicity and lethality to organisms passing through the mixing zone.
- H.** The Director shall not establish a mixing zone in an AZPDES permit for the following persistent, bioaccumulative pollutants:
1. Chlordane,
  2. DDT and its metabolites (DDD and DDE),
  3. Dieldrin,
  4. Dioxin,
  5. Endrin,
  6. Endrin aldehyde,
  7. Heptachlor,
  8. Heptachlor epoxide,
  9. Lindane,
  10. Mercury,
  11. Polychlorinated biphenyls (PCBs), and
  12. Toxaphene.

**Historical Note**

**R18-11-115. Site-Specific Standards**

- A.** The Director shall adopt a site-specific standard by rule.
- B.** The Director may adopt a site-specific standard based upon a request or upon the Director's initiative for any of the following reasons:
1. Local physical, chemical, or hydrological conditions of a surface water such as pH, hardness, fate and transport, or temperature alters the biological availability or toxicity of a pollutant;
  2. The sensitivity of resident aquatic organisms that occur in a surface water to a pollutant differs from the sensitivity of the species used to derive the numeric water quality standards to protect aquatic life in Appendix A;
  3. Resident aquatic organisms that occur in a surface water represent a narrower mix of species than those in the dataset used by ADEQ to derive numeric water quality standards to protect aquatic life in Appendix A;
  4. The natural background concentration of a pollutant is greater than the numeric water quality standard to protect aquatic life prescribed in Appendix A. "Natural background" means the concentration of a pollutant in a surface water due only to non-anthropogenic sources; or
  5. Other factors or combination of factors that upon review by the Director warrant changing a numeric water quality standard for a surface water.
- C.** Site-specific standard by request. To request that the Director adopt a site-specific standard, a person must conduct a study to support the development of a site-specific standard using a scientifically-defensible procedure.

## TITLE 18. ENVIRONMENTAL QUALITY

Adopted effective February 18, 1992 (Supp. 92-1). Amended by final rulemaking at 14 A.A.R. 4708, effective January 31, 2009 (Supp. 08-4).

**R18-11-117. Canals and Urban Park Lakes**

A. Nothing in this Article prevents the routine physical or mechanical maintenance of canals, drains, and the urban lakes identified in Appendix B. Physical or mechanical maintenance

includes dewatering, lining, dredging, and the physical, biological, or chemical control of weeds and algae. Increases in turbidity that result from physical or mechanical maintenance activities are permitted in canals, drains, and the urban lakes identified in Appendix B.

B. The discharge of lubricating oil associated with the start-up of well pumps that discharge to canals is not a violation of R18-11-108(B).

**R18-11-118. Dams and Flood Control Structures**

Increases in turbidity that result from the routine physical or mechanical maintenance of a dam or flood control structure are not violations of this Article. Nothing in this Article requires the release of water from a dam or a flood control structure.

**Historical Note**

**R18-11-119. Natural background**

Where the concentration of a pollutant exceeds a water quality standard and the exceedance is not caused by human activity but is due solely to naturally-occurring conditions, the exceedance shall not be considered a violation of the water quality standard.

**Historical Note**

Adopted effective February 18, 1992 (Supp. 92-1).

**R18-11-120. Enforcement of Non-permitted Discharges**

- A. The Department may establish a numeric water quality standard at a concentration that is below the practical quantitation limit. Therefore, in enforcement actions pursuant to subsection (B), the water quality standard is enforceable at the practical quantitation limit.
- B. Except for chronic aquatic and wildlife criteria, for non-permitted discharge violations, the Department shall determine compliance with numeric water quality standard criteria from the analytical result of a single sample, unless additional samples are required under this article. For chronic aquatic and wildlife criteria, compliance for non-permitted discharge violations shall be determined from the geometric mean of the analytical results of the last four samples taken at least 24 hours apart. For the purposes of this Section, a "non-permitted discharge violation" does not include a discharge regulated under an AZPDES permit.

**Historical Note**

Adopted effective February 18, 1992 (Supp. 92-1). Amended effective April 24, 1996 (Supp. 96-2). Amended by final rulemaking at 8 A.A.R. 1264, effective March 8, 2002 (Supp. 02-1). Amended by final rulemaking at 25 A.A.R. 2515, effective November 9, 2019 (Supp. 19-3).

**R18-11-121. Schedules of Compliance**

A compliance schedule in an AZPDES permit shall require the permittee to comply with a discharge limitation based upon a new or revised water quality standard as soon as possible to achieve com-

pliance. The permittee shall demonstrate that all requirements under § 301(b) and § 306 of the Clean Water Act [33 U.S.C. 1311(b) and 1316] are achieved and that the point source cannot comply with a discharge limitation based upon the new or revised water quality standard through the application of existing water pollution control technology, operational changes, or source reduction. In establishing a compliance schedule, the Director shall consider:

1. How much time the permittee has already had to meet any effluent limitations under a prior permit;
2. The extent to which the permittee has made good faith efforts to comply with the effluent limitations and other requirements in a prior permit;
3. Whether treatment facilities, operations, or measures must be modified to meet the effluent limitations;
4. How long any necessary modifications would take to implement; and
5. Whether the permittee would be expected to use the same treatment facilities, operations or other measures to meet the effluent limitations as it would have used to meet the effluent limitations in a prior permit.

**Historical Note**

Adopted effective February 18, 1992 (Supp. 92-1).

Amended effective April 24, 1996 (Supp. 96-2).

Amended by final rulemaking at 8 A.A.R. 1264, effective March 8, 2002 (Supp. 02-1). Amended by final rulemaking at 14 A.A.R. 4708, effective January 31, 2009 (Supp. 08-4). Amended by final rulemaking at 22 A.A.R. 2328, effective August 2, 2016 (Supp. 16-4).

**R18-11-122. Variances**

- A. Upon request, the Director may establish, by rule, a discharger-specific or water segment(s)-specific variance from a water quality standard if requirements pursuant to this Section are met.
- B. A person who requests a variance must demonstrate all of the following information:
  1. Identification of the specific pollutant and water quality standard for which a variance is sought.
  2. Identification of the receiving surface water segment or segments to which the variance would apply.
  3. A detailed discussion of the need for the variance, including the reasons why compliance with the water quality standard cannot be achieved over the term of the proposed variance, and any other useful information or analysis to evaluate attainability.
  4. A detailed discussion of the discharge control technologies that are available for achieving compliance with the water quality standard for which a variance is sought.
  5. Documentation that more advanced treatment technology than applicable technology-based effluent limitations is necessary to achieve compliance with the water quality standard for which a variance is sought.
  6. A detailed description of proposed interim discharge limitations and pollutant control activities that represent the highest level of treatment achievable by a point source discharger or dischargers during the term of the variance.
  7. Documentation that the proposed term is only as long as necessary to achieve the highest attainable condition.
  8. Documentation that is appropriate to the type of use to which the variance would apply as follows:
    - a. For a water quality standard variance to a use specified in Clean Water Act § 101(a)(2), documentation must include demonstration of at least one of the following factors that preclude attainment of the use during the term of the variance:
      - i. Naturally occurring pollutant concentrations prevent attainment of the use;
      - ii. Natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating state water conservation requirements to enable uses to be met;
      - iii. That human-caused conditions or sources of pollution prevent the attainment of the water quality standard for which the variance is sought and either (1) it is not possible to remedy the conditions or sources of pollution or (2) remedying the human-caused conditions would cause more environmental damage to correct than to leave in place;
      - iv. Dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use;
      - v. Physical conditions related to the natural features of the water body, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses;
      - vi. That installation and operation of each of the available discharge technologies more advanced than those required to comply with technology-based effluent limitations to achieve compliance with the water quality standard would result in substantial and widespread economic and social impact; or
      - vii. Actions necessary to facilitate lake, wetland, or stream restoration through dam removal or other significant reconfiguration activities preclude attainment of the designated use and criterion while the actions are being implemented.
    - b. For a water quality standard variance to a use other than those uses specified in Clean Water Act § 101(a)(2), documentation must justify how consideration and value of the water subject to the use appropriately supports the variance and term. A demonstration consistent with (B)(8)(a) of this Section may be used to satisfy this requirement.
9. For a waterbody segment(s)-specific variance, the following information is required before the Director may issue a variance, in addition to all other required documentation pursuant to this Section:
  - a. Identification and documentation of any cost-effective and reasonable best management practices for nonpoint source controls related to the pollutant(s) or water quality parameter(s) and water body or waterbody segment(s) specified in the variance that could be implemented to make progress towards attaining the underlying designated use and criterion; and
  - b. If any variance pursuant to subsection (B)(9)(a) previously applied to the water body or waterbody seg-

ment(s), documentation must also demonstrate whether and to what extent best management practices for nonpoint source controls were implemented to address the pollutant(s) or water quality parameter(s) subject to the water quality variance and the water quality progress achieved.

10. For a discharger-specific variance, the following information is required before the Director may issue a variance, in addition to all other required documentation pursuant to this Section:
  - a. Identification of the permittee subject to the variance;
  - b. For an existing point source discharge, a detailed description of the existing discharge control technologies that are used to achieve compliance with applicable water quality standards. For a new point source discharge, a detailed description of the proposed discharge control technologies that will be used to achieve compliance with applicable water quality standards; and
  - c. Documentation that the existing or proposed discharge control technologies will comply with applicable technology-based effluent limitations.
- C. The Director shall consider the following factors when deciding whether to grant or deny a variance request:
  1. Bioaccumulation,
  2. The predicted exposure of biota and the likelihood that resident biota will be adversely affected,
  3. The known or predicted safe exposure levels for the pollutant for which the variance is requested, and
  4. The likelihood of adverse human health effects.
- D. The variance shall represent the highest attainable condition of the water body or water body segment applicable throughout the term of the variance.
- E. A variance shall not result in any lowering of the currently attained ambient water quality, unless the variance is necessary for restoration activities, consistent with subsection (B)(8)(a)(vii). The Director must specify the highest attainable condition of the water body or waterbody segment as a quantifiable expression of one of the following:
  1. The highest attainable interim criterion,
  2. The interim effluent condition that reflects the greatest pollutant reduction achievable; or
  3. If no additional feasible pollutant control technology can be identified, the interim criterion or interim effluent condition that reflects the greatest pollutant reduction achievable with the pollutant control technologies installed at the time of the issuance of the variance, and the adoption and implementation of a Pollutant Minimization Program.
- F. A variance shall not modify the underlying designated use and criterion. A variance is only a time limited exception to the underlying standard. For discharge-specific variances, other point source dischargers to the surface water that are not granted a variance shall still meet all applicable water quality standards.
- G. Point source discharges shall meet all other applicable water quality standards for which a variance is not granted.
- H. The Director may not grant a variance for a point source discharge to an OAW listed in R18-11-112(G).
- I. Each variance established by the Director is subject to review and approval by the Regional Administrator.
- J. The term of the water quality variance may only be as long as necessary to achieve the highest attainable condition and must be consistent with the supporting documentation in subsection (E). The variance term runs from the approval of the variance by the Regional Administrator.
- K. The Director shall reevaluate, in its triennial review, whether each variance continues to represent the highest attainable condition. Comment on the variance shall be considered regarding whether the variance continues to represent the highest attainable condition. If the Director determines that the requirements of the variance do not represent the highest attainable condition, then the Director shall modify or repeal the variance in its triennial review rulemaking.
- L. If the variance is modified by rulemaking, the requirements of the variance shall represent the highest attainable condition at the time of initial adoption of the variance, or the highest attainable condition identified during the current reevaluation, whichever is more stringent.
- M. Upon expiration of a variance, point source dischargers shall comply with the water quality standard.
- N. The following are discharger-specific variances adopted by the Director:
- O. The following are water body and waterbody segment-specific variances adopted by the Director:

## Footnotes

- a. The asbestos standard is 7 million fibers (longer than 10 micrometers) per liter.
- b. The aldrin/dieldrin standard is exceeded when the sum of the two compounds exceeds 0.003 µg/L.
- c. In lakes, the acute criteria for hydrogen sulfide apply only to water samples taken from the epilimnion, or the upper layer of a lake or reservoir.
- d. Hardness, expressed as mg/L CaCO<sub>3</sub>, is determined according to the following criteria:
  - i. If the receiving water body has an A&Wc or A&Ww designated use, then hardness is based on the hardness of the receiving water body from a sample taken at the same time that the sample for the metal is taken, except that the hardness may not exceed 400 mg/L CaCO<sub>3</sub>.
  - ii. If the receiving water has an A&Wedw or A&We designated use, then the hardness is based on the hardness of the effluent from a sample taken at the same time that the sample for the metal is taken, except that the hardness may not exceed 400 mg/L CaCO<sub>3</sub>.
  - iii. The mathematical equations for the hardness-dependent parameter represent the water quality standards. Examples of criteria for the hardness-dependent parameters have been calculated and are presented in separate tables at the end of Appendix A for the convenience of the user.
- e. pH is determined according to the following criteria:
  - i. If the receiving water has an A&Wc or A&Ww designated use, then pH is based on the pH of the receiving water body from a sample taken at the same time that the sample for pentachlorophenol or ammonia is taken.
  - ii. If the receiving water body has an A&Wedw or A&We designated use, then the pH is based on the pH of the effluent from a sample taken at the same time that the sample for pentachlorophenol or ammonia is taken.
  - iii. The mathematical equations for ammonia represent the water quality standards. Examples of criteria for ammonia have been calculated and are presented in separate tables at the end of Appendix A for the convenience of the user.
- f. Table 1 abbreviations.
  - i. µg/L = micrograms per liter,
  - ii. mg/kg = milligrams per kilogram,
  - iii. pCi/L = picocuries per liter,
  - iv. D = dissolved,
  - v. T = total recoverable,
  - vi. TTHM indicates that the chemical is a trihalomethane.
- g. The total trihalomethane (TTHM) standard is exceeded when the sum of these four compounds exceeds 80 µg/L, as a rolling annual average.
- h. The concentration of gross alpha particle activity includes radium-226, but excludes radon and uranium.
- i. The average annual concentration of beta particle activity and photon emitters from manmade radionuclides shall not produce an annual dose equivalent to the total body or any internal organ greater than four millirems per year.
- j. The mathematical equations for the pH-dependent parameters represent the water quality standards. Examples of criteria for the pH-dependent parameters have been calculated and are presented in separate tables at the end of Appendix A for the convenience of the user.
- k. Abbreviations for the mathematical equations are as follows:
 

e = the base of the natural logarithm and is a mathematical constant equal to 2.71828  
 LN = is the natural logarithm  
 CMC = Criterion Maximum Concentration (acute)  
 CCC = Criterion Continuous Concentration (chronic)

**Table 17. Chronic Criteria for Total Ammonia (in mg/L, as N) for Aquatic and Wildlife coldwater, Unionid Mussels Absent**

For the aquatic and wildlife coldwater uses, unionids will be assumed to be present unless a study is performed demonstrating that they are absent and there is no historic evidence of their presence, or hydrologic modification has altered the flow regime in a way that would prevent their reestablishment.

**ARTICLE 2. WATER QUALITY STANDARDS FOR NON-WOTUS PROTECTED SURFACE WATERS****R18-11-201. Definitions**

The following terms apply to this Article:

1. "Acute toxicity" means toxicity involving a stimulus severe enough to induce a rapid response. In aquatic toxicity tests, an effect observed in 96 hours or less is considered acute.
2. "Agricultural irrigation AZ (AgI AZ)" means the use of a non-WOTUS protected surface water for crop irrigation.
3. "Agricultural livestock watering AZ (AgL AZ)" means the use of a non-WOTUS protected surface water as a water supply for consumption by livestock.
4. "Aquatic and wildlife AZ (cold water) (A&Wc AZ)" means the use of a non-WOTUS protected surface water by animals, plants, or other cold-water organisms, generally occurring at an elevation greater than 5000 feet, for habitation, growth, or propagation.
5. "Aquatic and wildlife AZ (warm water) (A&Ww AZ)" means the use of a non-WOTUS protected surface water by animals, plants, or other warm-water organisms, generally occurring at an elevation less than 5000 feet, for habitation, growth, or propagation.
6. "Assimilative capacity" means the difference between the baseline water quality concentration for a pollutant and the most stringent applicable water quality criterion for that pollutant.
7. "Complete Mixing" means the location at which concentration of a pollutant across a transect of a surface water differs by less than five percent.
8. "Criteria" means elements of water quality standards expressed as pollutant concentrations, levels, or narrative

statements representing a water quality that supports a designated use.

9. "Critical flow conditions of the discharge" means the hydrologically based discharge flow averages that the director uses to calculate and implement applicable water quality criteria to a mixing zone's receiving water as follows:
  - a. For acute aquatic water quality standard criteria, the discharge flow critical condition is represented by the maximum one-day average flow analyzed over a reasonably representative timeframe.
  - b. For chronic aquatic water quality standard criteria, the discharge flow critical flow condition is represented by the maximum monthly average flow analyzed over a reasonably representative timeframe.
  - c. For human health-based water quality standard criteria, the discharge flow critical condition is the long-term arithmetic mean flow, averaged over several years so as to simulate long-term exposure.
10. "Critical flow conditions of the receiving water" means the hydrologically based receiving water low flow averages that the director uses to calculate and implement applicable water quality criteria:
  - a. For acute aquatic water quality standard criteria, the receiving water critical condition is represented as the lowest one-day average flow event expected to occur once every ten years, on average (1Q10).
  - b. For chronic aquatic water quality standard criteria, the receiving water critical flow condition is represented as the lowest seven-consecutive-day average flow expected to occur once every 10 years, on average (7Q10), or
  - c. For human health-based water quality standard criteria, in order to simulate long-term exposure, the

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

receiving water critical flow condition is the harmonic mean flow.

11. "Designated use" means a use specified on the Protected Surface Waters List for a non-WOTUS protected surface water.
12. "Domestic water source AZ (DWS AZ)" means the use of a non-WOTUS protected surface water as a source of potable water. Treatment of a surface water may be necessary to yield a finished water suitable for human consumption.
13. "Fish consumption AZ (FC AZ)" means the use of a non-WOTUS protected surface water by humans for harvesting aquatic organisms for consumption. Harvestable aquatic organisms include, but are not limited to, fish, clams, turtles, crayfish, and frogs.
14. "Full-body contact AZ (FBC AZ)" means the use of a non-WOTUS protected surface water for swimming or other recreational activity that causes the human body to come into direct contact with the water to the point of complete submergence. The use is such that ingestion of the water is likely, and sensitive body organs, such as the eyes, ears, or nose, may be exposed to direct contact with the water.
15. "Geometric mean" means the  $n$ th root of the product of  $n$  items or values. The geometric mean is calculated using the following formula:

$$GM_y = \sqrt[n]{(Y_1)(Y_2)(Y_3)(Y_n)}$$

16. "Hardness" means the sum of the calcium and magnesium concentrations, expressed as calcium carbonate (CaCO<sub>3</sub>) in milligrams per liter.
17. "Mixing zone" means an area or volume of a surface water that is contiguous to a point source discharge where dilution of the discharge takes place.
18. "Non-WOTUS protected surface water" means a protected surface water designated in Table A of R18-11-216 or added to the PSWL by an emergency action authorized by A.R.S. § 49-221(G)(7) that is not a WOTUS.
19. "Oil" means petroleum in any form, including crude oil, gasoline, fuel oil, diesel oil, lubricating oil, or sludge.
20. "Partial-body contact AZ (PBC AZ)" means the recreational use of a non-WOTUS protected surface water that may cause the human body to come into direct contact with the water, but normally not to the point of complete submergence (for example, wading or boating). The use is such that ingestion of the water is not likely and, sensitive body organs, such as the eyes, ears, or nose, will not normally be exposed to direct contact with the water.
21. "Pollutant" means fluids, contaminants, toxic wastes, toxic pollutants, dredged spoil, solid waste, substances and chemicals, pesticides, herbicides, fertilizers and other agricultural chemicals, incinerator residue, sewage, garbage, sewage sludge, munitions, petroleum products, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and mining, industrial, municipal, and agricultural wastes or any other liquid, solid, gaseous, or hazardous substance.
22. "Practical quantitation limit" means the lowest level of quantitative measurement that can be reliably achieved during a routine laboratory operation.
23. "Recharge Project" means a facility necessary or convenient to obtain, divert, withdraw, transport, exchange,

deliver, treat, or store water to infiltrate or reintroduce that water into the ground.

24. "Toxic" means a pollutant or combination of pollutants, that after discharge and upon exposure, ingestion, inhalation, or assimilation into an organism, either directly from the environment or indirectly by ingestion through food chains, may cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunctions in reproduction), or physical deformations in the organism or its offspring.
25. "Urban lake" means a manmade lake within an urban landscape.
26. "Wastewater" does not mean:
  - a. Stormwater,
  - b. Discharges authorized under the De Minimis General Permit,
  - c. Other allowable non-stormwater discharges permitted under the Construction General Permit or the Multi-sector General Permit, or
  - d. Stormwater discharges from a municipal storm sewer system (MS4) containing incidental amounts of non-stormwater that the MS4 is not required to prohibit.
27. "Wetland" means, for the purposes of non-WOTUS protected surface waters, an area that is inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances does support, a prevalence of vegetation typically adapted for life in saturated soil conditions.
28. "WOTUS" means waters of the state that are also navigable waters as defined by Section 502(7) of the Clean Water Act.
29. "WOTUS protected surface water" means a protected surface water that is a WOTUS.
30. "Zone of initial dilution" means a small area in the immediate vicinity of an outfall structure in which turbulence is high and causes rapid mixing with the surrounding water.

**R18-11-203. Designated Uses for Non-WOTUS Protected Surface Waters**

- A. The designated uses for specific non-WOTUS protected surface waters are listed in the Protected Surface Waters List in this article. The designated uses that may be assigned to a non-WOTUS protected surface water are:
  - 1. Full-body contact AZ,
  - 2. Partial-body contact AZ,
  - 3. Domestic water source AZ,
  - 4. Fish consumption AZ,
  - 5. Aquatic and wildlife AZ (cold water),
  - 6. Aquatic and wildlife AZ (warm water),
  - 7. Agricultural irrigation AZ, and
  - 8. Agricultural livestock watering AZ.
- B. Numeric water quality criteria to maintain and protect water quality for the designated uses assigned to non-WOTUS protected surface waters are prescribed in R18-11-215. Narrative water quality standards to protect non-WOTUS protected surface waters are prescribed in R18-11-214.
- C. If a non-WOTUS protected surface water has more than one designated use listed in the Protected Surface Waters List, the most stringent water quality criterion applies.
- D. The Director shall revise the designated uses of a non-WOTUS protected surface water if water quality improvements result in a level of water quality that permits a use that is not currently listed as a designated use in the Protected Surface Waters List.
- E. The Director may remove a designated use or adopt a subcategory of a designated use that requires less stringent water quality criteria through a rulemaking action for any of the following reasons:
  - 1. A naturally-occurring pollutant concentration prevents the attainment of the use;
  - 2. A human-caused condition or source of pollution prevents the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place;

- 3. A dam, diversion, or other type of hydrologic modification precludes the attainment of the use, and it is not feasible to restore the non-WOTUS protected surface water to its original condition or to operate the modification in a way that would result in attainment of the use;
- 4. A physical condition related to the natural features of the surface water, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, precludes attainment of an aquatic life designated use.

The use is such that ingestion of the water is likely and sensitive body organs, such as the eyes, ears, or nose, may be exposed to direct contact with the water.
- 4. The partial-body contact AZ use applies to a non-WOTUS protected surface water if the Director makes a determination that the non-WOTUS protected surface water is used by humans in a way that may cause the human body to come into direct contact with the water, but normally not to the point of complete submergence (for example, wading or boating). The use is such that ingestion of the water is not likely and sensitive body organs, such as the eyes, ears, or nose, will not normally be exposed to direct contact with the water.

sumption. Harvestable aquatic organisms include, but are not limited to, fish, clams, turtles, crayfish, and frogs.

**R18-11-206. Mixing Zones**

- A. The Director may establish a mixing zone for a point source discharge to a non-WOTUS protected surface water as a condition of an individual AZPDES permit on a pollutant-by-pollutant basis. A mixing zone is prohibited where there is no water for dilution, or as prohibited pursuant to subsection (H).
- B. The owner or operator of a point source seeking the establishment of a mixing zone shall submit a request to the Director for a mixing zone as part of an application for an AZPDES permit. The request shall include:
  1. An identification of the pollutant for which the mixing zone is requested;
  2. A proposed outfall design;
  3. A definition of the boundary of the proposed mixing zone. For purposes of this subsection, the boundary of a mixing zone is where complete mixing occurs; and
  4. A complete and detailed description of the existing physical, biological, and chemical conditions of the receiving water and the predicted impact of the proposed mixing zone on those conditions. The description shall also address the factors listed in subsection (D) that the Director must consider when deciding to grant or deny a request and shall address the mixing zone requirements in subsection (H).
- C. The Director shall consider the following factors when deciding whether to grant or deny a request for a mixing zone:
  1. The assimilative capacity of the receiving water;
  2. The likelihood of adverse human health effects;
  3. The location of drinking water plant intakes and public swimming areas;
  4. The predicted exposure of biota and the likelihood that resident biota will be adversely affected;
  5. Bioaccumulation;
  6. Whether there will be acute toxicity in the mixing zone, and, if so, the size of the zone of initial dilution;
  7. The known or predicted safe exposure levels for the pollutant for which the mixing zone is requested;
  8. The size of the mixing zone;
  9. The location of the mixing zone relative to biologically sensitive areas in the surface water;
  10. The concentration gradient of the pollutant within the mixing zone;
  11. Sediment deposition;
  12. The potential for attracting aquatic life to the mixing zone; and
  13. The cumulative impacts of other mixing zones and other discharges to the surface water.
- D. Director determination.
  1. The Director shall deny a request to establish a mixing zone if an applicable water quality standard will be violated outside the boundaries of the proposed mixing zone.
  2. If the Director approves the request to establish a mixing zone, the Director shall establish the mixing zone as a condition of an AZPDES permit. The Director shall include any mixing zone condition in the AZPDES permit that is necessary to protect human health and the designated uses of the surface water.
- E. Any person who is adversely affected by the Director's decision to grant or deny a request for a mixing zone may appeal the decision under A.R.S. § 49-321 et seq. and A.R.S. § 41-1092 et seq.
- F. The Director shall reevaluate a mixing zone upon issuance, reissuance, or modification of the AZPDES permit for the point source or a modification of the outfall structure.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

**G. Mixing zone requirements.**

1. A mixing zone shall be as small as practicable in that it shall not extend beyond the point in the waterbody at which complete mixing occurs under the critical flow conditions of the discharge and of the receiving water.
2. The total horizontal area allocated to all mixing zones on a lake shall not exceed 10 percent of the surface area of the lake.
3. Adjacent mixing zones in a lake shall not overlap or be located closer together than the greatest horizontal dimension of the largest mixing zone.
4. The design of any discharge outfall shall maximize initial dilution of the wastewater in a surface water.
5. The size of the zone of initial dilution in a mixing zone shall prevent lethality to organisms passing through the zone of initial dilution. The mixing zone shall prevent acute toxicity and lethality to organisms passing through the mixing zone.

**H. The Director shall not establish a mixing zone in an AZPDES permit for the following persistent, bioaccumulative pollutants:**

1. Chlordane,
2. DDT and its metabolites (DDD and DDE),
3. Dieldrin,
4. Dioxin,
5. Endrin,
6. Endrin aldehyde,
7. Heptachlor,
8. Heptachlor epoxide,
9. Lindane,
10. Mercury,
11. Polychlorinated biphenyls (PCBs), and
12. Toxaphene.

**R18-11-208. Schedules of Compliance**

A compliance schedule in an AZPDES permit shall require the permittee to comply with a discharge limitation based upon a new or revised water quality standard as soon as possible to achieve compliance. The permittee shall demonstrate that the point source cannot comply with a discharge limitation based upon the new or revised water quality standard through the application of existing water pollution control technology, operational changes, or source reduction. In establishing a compliance schedule, the Director shall consider:

1. How much time the permittee has already had to meet any effluent limitations under a prior permit;
2. The extent to which the permittee has made good faith efforts to comply with the effluent limitations and other requirements in a prior permit;
3. Whether treatment facilities, operations, or measures must be modified to meet the effluent limitations;
4. How long any necessary modifications would take to implement; and
5. Whether the permittee would be expected to use the same treatment facilities, operations or other measures to meet the effluent limitations as it would have used to meet the effluent limitations in a prior permit.

**R18-11-209. Variances**

- A.** Upon request, the Director may establish, by rule, a discharger-specific or water segment-specific or water segments-specific variance from a water quality standard if requirements pursuant to this Section are met.
- B.** A person who requests a variance must demonstrate all of the following information:
  1. Identification of the specific pollutant and water quality standard for which a variance is sought.
  2. Identification of the receiving surface water segment or segments to which the variance would apply.
  3. A detailed discussion of the need for the variance, including the reasons why compliance with the water quality

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

standard cannot be achieved over the term of the proposed variance, and any other useful information or analysis to evaluate attainability.

4. A detailed description of proposed interim discharge limitations and pollutant control activities that represent the highest level of treatment achievable by a point source discharger or dischargers during the term of the variance.
  5. Documentation that the proposed term is only as long as necessary to achieve compliance with applicable water quality standards.
  6. Documentation that is appropriate to the type of designated use to which the variance would apply as follows. For a water quality standard variance documentation must include a demonstration of at least one of the following factors that preclude attainment of the use during the term of the variance:
    - a. Naturally occurring pollutant concentrations prevent attainment of the use;
    - b. Natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating state water conservation requirements to enable uses to be met;
    - c. That human-caused conditions or sources of pollution prevent the attainment of the water quality standard for which the variance is sought and either (1) it is not possible to remedy the conditions or sources of pollution or (2) remedying the human-caused conditions would cause more environmental damage to correct than to leave in place;
    - d. Dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use;
    - e. Physical conditions related to the natural features of the water body, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses;
    - f. Actions necessary to facilitate lake, wetland, or stream restoration through dam removal or other significant reconfiguration activities preclude attainment of the designated use and criterion while the actions are being implemented.
  7. For a waterbody segment-specific or segments-specific variance, the following information is required before the Director may issue a variance, in addition to all other required documentation pursuant to this Section:
    - a. Identification and documentation of any cost-effective and reasonable best management practices for nonpoint source controls related to the pollutant or pollutants or water quality parameter or parameters and water body or waterbody segment or segments specified in the variance that could be implemented to make progress towards attaining the underlying designated use and criterion; and
    - b. If any variance pursuant to subsection (B)(7)(a) previously applied to the water body or waterbody segment or segments, documentation must also demonstrate whether and to what extent best management practices for nonpoint source controls were implemented to address the pollutant or pollutants or water quality parameter or parameters subject to the water quality variance and the water quality progress achieved.
  8. For a discharger-specific variance, the following information is required before the Director may issue a variance, in addition to all other required documentation pursuant to this Section: Identification of the permittee subject to the variance.
- C. The Director shall consider the following factors when deciding whether to grant or deny a variance request:
    1. Bioaccumulation,
    2. The predicted exposure of biota and the likelihood that resident biota will be adversely affected,
    3. The known or predicted safe exposure levels for the pollutant for which the variance is requested, and
    4. The likelihood of adverse human health effects.
  - D. The variance shall represent the highest attainable condition of the water body or water body segment applicable throughout the term of the variance.
  - E. A variance shall not result in any lowering of the currently attained ambient water quality, unless the variance is necessary for restoration activities, consistent with subsection (B)(6)(a)(vi). The Director must specify the highest attainable condition of the water body or waterbody segment as a quantifiable expression of one of the following:
    1. The highest attainable interim criterion,
    2. The interim effluent condition that reflects the greatest pollutant reduction achievable.
  - F. A variance shall not modify the underlying designated use and criterion. A variance is only a time limited exception to the underlying standard. For discharge-specific variances, other point source dischargers to the surface water that are not granted a variance shall still meet all applicable water quality standards.
  - G. Point source discharges shall meet all other applicable water quality standards for which a variance is not granted.
  - H. The term of the water quality variance may only be as long as necessary to achieve the highest attainable condition and must be consistent with the supporting documentation in subsection (E).
  - I. The Director shall periodically, but not more than every five years, reevaluate whether each variance continues to represent the highest attainable condition. Comment on the variance shall be considered regarding whether the variance continues to represent the highest attainable condition during each rulemaking for this Article. If the Director determines that the requirements of the variance do not represent the highest attainable condition, then the Director shall modify or repeal the variance during the rulemaking.
  - J. If the variance is modified by rulemaking, the requirements of the variance shall represent the highest attainable condition at the time of initial adoption of the variance, or the highest attainable condition identified during the current reevaluation, whichever is more stringent.
  - K. Upon expiration of a variance, point source dischargers shall comply with the water quality standard.

**R18-11-210. Site Specific Standards**

- A. The Director shall adopt a site-specific standard by rule.
- B. The Director may adopt a site-specific standard based upon a request or upon the Director's initiative for any of the following reasons:
  1. Local physical, chemical, or hydrological conditions of a non-WOTUS protected surface water such as pH, hardness, fate and transport, or temperature alters the biological availability or toxicity of a pollutant;
  2. The sensitivity of resident aquatic organisms that occur in a non-WOTUS protected surface water to a pollutant differs from the sensitivity of the species used to derive the numeric water quality standards to protect aquatic life in R18-11-215;
  3. Resident aquatic organisms that occur in a non-WOTUS protected surface water represent a narrower mix of species than those in the dataset used by ADEQ to derive numeric water quality standards to protect aquatic life in R18-11-215;
  4. The natural background concentration of a pollutant is greater than the numeric water quality standard to protect aquatic life prescribed in R18-11-215. "Natural background" means the concentration of a pollutant in a non-WOTUS protected surface water due only to non-anthropogenic sources; or
  5. Other factors or combination of factors that upon review by the Director warrant changing a numeric water quality standard for a non-WOTUS protected surface water.
- C. Site-specific standard by request. To request that the Director adopt a site-specific standard, a person must conduct a study to support the development of a site-specific standard using a scientifically defensible procedure. Before conducting the study, a person shall submit a study outline to the Director for approval that contains the following elements:
  1. Identifies the pollutant;
  2. Describes the reach's boundaries;
  3. Describes the hydrologic regime of the waterbody;
  4. Describes the scientifically defensible procedure, which can include relevant aquatic life studies, ecological studies, laboratory tests, biological translators, fate and transport models, and risk analyses;
  5. Describes and compares the taxonomic composition, distribution and density of the aquatic biota within the reach to a reference reach and describes the basis of any major taxonomic differences;
  6. Describes the pollutant's effect on the affected species or appropriate surrogate species and on the other designated uses listed for the reach;
  7. Demonstrates that all designated uses are protected; and
  8. A person seeking to develop a site-specific standard based on natural background may use statistical or modeling approaches to determine natural background concentration.

**R18-11-211. Enforcement of Non-permitted Discharges to Non-WOTUS Protected Surface Waters**

- A. The Department may establish a numeric water quality standard at a concentration that is below the practical quantitation limit. Therefore, in enforcement actions pursuant to subsection (B), the water quality standard is enforceable at the practical quantitation limit.
- B. Except for chronic aquatic and wildlife criteria, for non-permitted discharge violations, the Department shall determine compliance with numeric water quality standard criteria from the analytical result of a single sample, unless additional samples are required under this article. For chronic aquatic and wildlife criteria, compliance for non-permitted discharge violations shall be determined from the geometric mean of the analytical results of the last four samples taken at least 24 hours apart. For the purposes of this Section, a "non-permitted discharge violation" does not include a discharge regulated under an AZPDES permit.

**R18-11-213. Procedures for Determining Economic, Social, and Environmental Cost and Benefits**

- A. The Director shall perform an economic, social, and environmental cost and benefits analysis that shows the benefits outweigh the costs before conducting any of the following rulemaking actions:
  1. Adopting a water quality standard that applies to non-WOTUS protected surface waters at a particular level or for a particular water category of non-WOTUS protected surface waters;
  2. Adding a non-WOTUS protected surface water to the Protected Surface Waters List when the conditions of A.R.S. § 49-221(G)(4) apply; or
  3. Removing a non-WOTUS protected surface water from the Protected Surface Waters List when the conditions of A.R.S. § 49-221(G)(6) apply.
- B. The economic, social, and environmental cost and benefit analysis must include:
  1. A justification of the valuation methodology used to quantify the costs or benefits of the rulemaking action;
  2. A reference to any study relevant to the economic, social, and environmental cost and benefit analysis that the agency reviewed and proposes either to rely on or not to rely on in its evaluation of the costs and benefits of the rulemaking action;
  3. A description of any data on which an economic, social, and environmental cost and benefits analysis is based and an explanation of how the data was obtained and why the data is acceptable data.
  4. A description of the probable impact of the rulemaking on any existing AZPDES permits that are impacted by the rulemaking action;
  5. A description of the probable amount of additional AZPDES permits that will be required for known and ongoing point-source discharges after the rulemaking is completed that otherwise would not have been required if the Director did not undertake the rulemaking action; and
  6. The administrative and other costs to ADEQ associated with the proposed rulemaking.
- C. The Director shall publish a copy of the economic, social, and environmental cost and benefits analysis to the agency website

prior to filing any rulemaking materials during any of the rulemaking actions listed in subsection (A) of this rule.

- D. If for any reason enough data is not reasonably available to comply with the requirements of subsection (B) of this section, the agency shall explain the limitations of the data and the methods that were employed in the attempt to obtain the data and shall characterize the probable impacts in qualitative terms.
- E. The Director is not required to prepare the economic, social, and environmental cost and benefits analysis required by this rule when:
  1. Adding or removing a WOTUS-protected surface water from the Protected Surface Waters List; or
  2. Adding a water to the Protected Surface Waters List on an emergency basis pursuant to A.R.S. § 49-221(G)(7).

**R18-11-214. Narrative Water Quality Standards for Non-WOTUS Protected Surface Waters**

- A. A non-WOTUS protected surface water shall not contain pollutants in amounts or combinations that:
  1. Settle to form bottom deposits that inhibit or prohibit the habitation, growth, or propagation of aquatic life;
  2. Cause objectionable odor in the area in which the non-WOTUS protected surface water is located;
  3. Cause off-taste or odor in drinking water;
  4. Cause off-flavor in aquatic organisms;
  5. Are toxic to humans, animals, plants, or other organisms;
  6. Cause the growth of algae or aquatic plants that inhibit or prohibit the habitation, growth, or propagation of other aquatic life or that impair recreational uses;
  7. Cause or contribute to a violation of an aquifer water quality standard prescribed in R18-11-405 or R18-11-406; or
  8. Change the color of the non-WOTUS protected surface water from natural background levels of color.
- B. A non-WOTUS protected surface water shall not contain oil, grease, or any other pollutant that floats as debris, foam, or scum; or that causes a film or iridescent appearance on the surface of the water; or that causes a deposit on a shoreline, bank, or aquatic vegetation. The discharge of lubricating oil or gasoline associated with the normal operation of a recreational watercraft is not a violation of this narrative standard
- C. A non-WOTUS protected surface water shall not contain a discharge of suspended solids in quantities or concentrations that interfere with the treatment processes at the nearest downstream potable water treatment plant or substantially increase the cost of handling solids produced at the nearest downstream potable water treatment plant.

**Historical Note**

Former Section R9-21-213 renumbered without change as Section R9-21-214 effective August 12, 1986 (Supp. 86-4). Former Section R9-21-214 renumbered without change as Section R18-11-214 (Supp. 87-3). Section repealed effective February 18, 1992 (Supp. 92-1). New Section made by final rulemaking at 29 A.A.R. 302 (January 27, 2023), effective February 20, 2023 (Supp. 22-4).

**R18-11-215. Numeric Water Quality Standards for Non-WOTUS Protected Surface Waters**

- A. *E. coli* bacteria. The following water quality standards for *Escherichia coli* (*E. coli*) are expressed in colony-forming units per 100 milliliters of water (cfu / 100 ml) or as a Most Probable Number (MPN):

<i>E. coli</i>	FBC AZ	PBC AZ
Geometric mean (minimum of four samples in 30 days)	126	126
Statistical threshold value	410	576

- B. pH. The following water quality standards for non-WOTUS protected surface waters pH are expressed in standard units:

pH	DWS AZ	FBC AZ, PBC AZ, A&Ww AZ, A&Wc AZ	AgI AZ	AgL AZ
Maximum	9.0	9.0	9.0	9.0
Minimum	5.0	6.5	4.5	6.5

- C. The maximum allowable increase in ambient water temperature, due to a thermal discharge is as follows:

A&Ww AZ	A&Wc AZ
3.0° C	1.0° C

- D. Suspended sediment concentration.

- The following water quality standards for suspended sediment concentration, expressed in milligrams per liter (mg/L), are expressed as a median value determined from a minimum of four samples collected at least seven days apart:
- The Director shall not use the results of a suspended sediment concentration sample collected during or within 48 hours after a local storm event to determine the median value.

A&Wc AZ	A&Ww AZ
25	80

- E. Dissolved oxygen. A non-WOTUS protected surface water meets the water quality standard for dissolved oxygen when either:

- The percent saturation of dissolved oxygen is equal to or greater than 90 percent, or
- The single sample minimum concentration for the designated use, as expressed in milligrams per liter (mg/L) is as follows:

Designated Use	Single sample minimum concentration in mg/L
A&Ww AZ	6.0
A&Wc AZ	7.0

The single sample minimum concentration is the same for the designated use in a lake, but the sample must be taken from a depth no greater than one meter.

- F. Tables 1 through 17 prescribe water quality criteria for individual pollutants by designated use.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

**Table 13. Chronic Criteria for Total Ammonia (in mg/L, as N) for Aquatic and Wildlife Coldwater AZ and Warmwater AZ, Unionid Mussels Present**

For the Aquatic and Wildlife Coldwater and Warmwater AZ uses, unionids will be assumed to be present unless a study is performed demonstrating that they are absent and there is no historic evidence of their presence, or hydrologic modification has altered the flow regime in a way that would prevent their reestablishment.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

**Table B. WOTUS Protected Surface Waters**

The waters listed in this table have been tentatively identified by ADEQ as WOTUS, under the law governing on 8/26/2022. Notwithstanding its inclusion on the list below, the status of a particular water in this table can be contested by a person in an enforcement or permit proceeding, a challenge to an identification as an impaired water, or a challenge to a proposed TMDL for an impaired water. Any changes to Table B will be made through formal rulemaking.

The waters on this list have their designated uses assigned by Title 18, Chapter 11, Article 1. Coordinates are from the North American Datum of 1983 (NAD83). All latitudes in Arizona are north and all longitudes are west, but the negative signs are not included in the WOTUS Protected Surface Waters Table. Some web-based mapping systems require a negative sign before the longitude values to indicate it is a west longitude.

**Watersheds:**

BW = Bill Williams  
 CG = Colorado – Grand Canyon  
 CL = Colorado – Lower Gila

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

**Table C. Historically Regulated as WOTUS and in Need of Confirmation**

The waters listed in this table have historically been and will continue to be regulated as WOTUS unless ADEQ makes a determination that they are non-WOTUS. Notwithstanding its inclusion on the list below, the status of a particular water in this table can be contested by a person in an enforcement or permit proceeding, a challenge to an identification as an impaired water, or a challenge to a proposed TMDL for an impaired water. Any changes to Table C will be made through formal rulemaking.

The waters on this list have their designated uses assigned by Title 18, Chapter 11, Article 1. Coordinates are from the North American Datum of 1983 (NAD83). All latitudes in Arizona are north and all longitudes are west, but the negative signs are not included in the Historically Regulated as WOTUS and in Need of Confirmation Table. Some web-based mapping systems require a negative sign before the longitude values to indicate it is a west longitude.

Table C made by final rulemaking at 29 A.A.R. 302 (January 27, 2023), effective February 20, 2023 (Supp. 22-4).

**R18-11-217. Best Management Practices for non-WOTUS Protected Surface Waters**

- A.** The BMPs described in this rule are intended to ensure that activities within the ordinary high-water mark of perennial or intermittent non-WOTUS protected surface waters, or within the bed and bank of other waters that materially impact (i.e., are within 1/4 mile upstream of) non-WOTUS protected surface waters, do not violate applicable surface water quality standards in the non-WOTUS protected surface waters. For purposes of this Section, the activities described in the prior sentence will be referred to as "regulated activities." Depending on the regulated activities conducted, not all of the BMPs described below may be applicable to a particular project. The owner or operator is responsible to consider the BMPs outlined below and to implement those necessary to ensure that the regulated activities will not violate applicable surface water quality standards in the non-WOTUS protected surface water.
- B.** The BMPs described below are not applicable to any activities that are addressed under an individual or general AZPDES permit that are otherwise regulated under A.R.S. Title 49.
- C.** Erosion and sedimentation control BMPs:
- When flow is present in any non-WOTUS protected surface waters within a project area, flow shall not be altered except to prevent erosion or pollution of any non-WOTUS protected surface waters.
  - Any disturbance within the ordinary high-water mark of non-WOTUS protected surface waters or within the bed and banks of other waters, that is not intended to be permanently altered, shall be stabilized as soon as practicable to prevent erosion and sedimentation.
  - When flow in any non-WOTUS protected surface water is sufficient to erode, carry, or deposit material, regulated activities shall cease until:
    - The flow decreases below the point where sediment movement ceases; or
    - Control measures have been undertaken, i.e., equipment and material easily transported by flow are protected within non-erodible barriers or moved outside the flow area.
  - Silt laden or turbid water resulting from regulated activities should be managed in a manner to reduce sediment load prior to discharging.
  - No washing or dewatering of fill material should occur within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface waters. Other than the replacement of native fill or material used to support vegetation rooting or growth, fill placed within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface water must resist washout whether such resistance is derived via particle size limits, presence of a binder, vegetation, or other armoring.
- D.** Pollutant management BMPs:
- If regulated activities are likely to violate applicable surface water quality standards in a perennial or intermittent non-WOTUS protected surface water, operations shall cease until the problem is resolved or until control measures have been implemented.
  - Construction material and/or fill (other than native fill or that necessary to support revegetation) placed within surface waters as a result of regulated activities shall not include pollutants in concentrations that will violate applicable surface water quality standards in a perennial or intermittent non-WOTUS protected surface water.
- E.** Construction phase BMPs:
- Equipment staging and storage areas or fuel, oil, and other petroleum products storage and solid waste containment should not be located within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface water.
  - Any equipment maintenance, washing, or fueling shall not be done within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface waters with the following exception: Equipment too large or unwieldy to be readily moved, such as large cranes, may be fueled and serviced in non-WOTUS protected surface waters (but outside of standing or flowing water) provided material specifically manufactured and sold as spill containment is in place during fueling/servicing.
  - All equipment shall be inspected for leaks, all leaks shall be repaired, and all repaired equipment shall be cleaned to remove any fuel or other fluid residue prior to use within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface waters.
  - Washout of concrete handling equipment shall not take place within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface waters.
- F.** Post-construction BMPs:
- Upon completion of regulated activities, areas within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface waters shall be promptly cleared of all forms, piling, construction residues, equipment, debris, or other obstructions.
  - If fully, partially, or occasionally submerged structures are constructed of cast-in-place concrete instead of precast concrete, steps will be taken using sheet piling or temporary dams to prevent contact between water (instream and runoff) and the concrete until it cures and until any curing agents have evaporated or are no longer a pollutant threat.
  - Any permanent water crossings within the ordinary high-water mark of any perennial or intermittent in a non-WOTUS protected surface water (other than fords) shall

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

not be equipped with gutters, drains, scuppers, or other conveyances that allow untreated runoff (due to events equal to or lesser in magnitude than the design event for the crossing structure) to directly enter a non-WOTUS protected surface water if such runoff can be directed to a local stormwater drainage, containment, and/or treatment system.

4. Debris shall be cleared as needed from culverts, ditches, dips, and other drainage structures within the ordinary high-water mark of any perennial or intermittent non-WOTUS protected surface water to prevent clogging or conditions that may lead to a washout.
5. Temporary structures constructed or imported materials shall be removed no later than upon completion of the regulated activities.
6. Temporary structures constructed of native materials, if they provide an obstacle to flow or can contribute to or cause erosion, or cause changes in sediment load, shall be removed no later than upon completion of the regulated activities.

**G. Design consideration BMPs:**

1. All temporary structures constructed of imported materials and all permanent structures, including but not limited to, access roadways, culvert crossings, staging areas, material stockpiles, berms, dikes, and pads, shall be constructed so as to accommodate overtopping and resist washout by streamflow.
2. Any temporary crossing, other than fords on native material, shall be constructed in such a manner so as to provide armoring of the stream channel. Materials used to provide this armoring shall not include anything easily transportable by flow. Examples of acceptable materials include steel plates, untreated wooden planks, pre-cast concrete planks or blocks. Examples of unacceptable materials include clay, silt, sand, and gravel finer than cobble (roughly fist-sized). The armoring shall, via mass, anchoring systems, or a combination of the two, resist washout.

**H. Notification.** The owner or operator of any regulated activities shall, five days prior to initiation of the regulated activities, submit a notice to ADEQ on a form that includes basic information including the GPS location, the waterbody ID of the nearest non-WOTUS protected surface water, general description of planned activities, types of BMPs to be employed during the project, and phone number and email for a contact person. Work may proceed after five calendar days have passed since the owner/operator provided notification to ADEQ unless ADEQ responds in writing to the contact person for the owner/operator.

**I. Exclusions:** The BMPs and notification requirements in this Section shall not apply to:

1. Activities that are already regulated under A.R.S. Title 49.
2. Discharges to a non-WOTUS protected surface water incidental to a recharge project.
3. Established or ongoing farming, ranching and silviculture activities such as plowing, seeding, cultivating, minor drainage or harvesting for the production of food, fiber or forest products or upland soil and water conservation practices.
4. Maintenance but not construction of drainage ditches.
5. Construction and maintenance of irrigation ditches.
6. Maintenance of structures as dams, dikes, and levees.

**R18-11-603. General Data Interpretation Requirements**

- A.** The Department shall use the following data conventions to interpret data for impaired water identifications and TMDL decisions:
1. Data reported below laboratory detection limits.
    - a. When the analytical result is reported as <X, where X is the laboratory detection limit for the analyte and the laboratory detection limit is less than or equal to the surface water quality standard, consider the result as meeting the water quality standard:
      - i. Use these statistically derived values in trend analysis, descriptive statistics or modeling if there is sufficient data to support the statistical estimation of values reported as less than the laboratory detection limit; or
      - ii. Use one-half of the value of the laboratory detection limit in trend analysis, descriptive statistics, or modeling, if there is insufficient data to support the statistical estimation of values reported as less than the laboratory detection limit.
    - b. When the sample value is less than or equal to the laboratory detection limit but the laboratory detection limit is greater than the surface water quality standard, shall not use the result for impaired water identifications or TMDL decisions;

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

2. Identify the field equipment specifications used for each listing cycle or TMDL developed. A field sample measurement within the manufacturer's specification for accuracy meets surface water quality standards;
  3. Resolve a data conflict by considering the factors identified under the weight-of-evidence determination in R18-11-605(B);
  4. When multiple samples from a surface water or segment are not spatially or temporally independent, or when lake samples are from multiple depths, use the following resultant value to represent the specific dataset:
    - a. The appropriate measure of central tendency for the dataset for:
      - i. A pollutant listed in the surface water quality standards 18 A.A.C. 11, Article 1, Appendix A, Table 1, except for nitrate or nitrate/nitrite;
      - ii. A chronic water quality standard for a pollutant listed in 18 A.A.C. 11, Article 1, Appendix A, Table 2;
      - iii. A surface water quality standard for a pollutant that is expressed as an annual or geometric mean;
      - iv. The surface water quality standard for temperature or the single sample maximum water quality standard for suspended sediment concentration, nitrogen, and phosphorus in R18-11-109;
      - v. The surface water quality standard for radiological chemicals in R18-11-109(G); or
      - vi. Except for chromium, all single sample maximum water quality standards in R18-11-112.
    - b. The maximum value of the dataset for:
      - i. The acute water quality standard for a pollutant listed in 18 A.A.C. 11, Article 1, Appendix A, Table 2 and acute water quality standard in R18-11-112;

    - c. The worst case measurement of the dataset for:
      - i. Surface water quality standard for dissolved oxygen under R18-11-109(E). For purposes of this subsection, worst case measurement means the minimum value for dissolved oxygen;
      - ii. Surface water quality standard for pH under R18-11-109(B). For purposes of this subsection, "worst case measurement" means both the minimum and maximum value for pH.
- B.** The Department shall not use the following data for placing a surface water or segment on the Planning List, the 303(d) List, or in making a TMDL decision.
1. Any measurement outside the range of possible physical or chemical measurements for the pollutant or measurement equipment,
  2. Uncorrected data transcription errors or laboratory errors, and
  3. An outlier identified through statistical procedures, where further evaluation determines that the outlier represents a valid measure of water quality but should be excluded from the dataset.
- C.** The Department may employ fundamental statistical tests if appropriate for the collected data and type of surface water when evaluating a surface water or segment for impairment or in making a TMDL decision. The statistical tests include descriptive statistics, frequency distribution, analysis of variance, correlation analysis, regression analysis, significance testing, and time series analysis.
- D.** The Department may employ modeling when evaluating a surface water or segment for impairment or in making a TMDL decision, if the method is appropriate for the type of waterbody and the quantity and quality of available data meet the requirements of R18-11-602. Modeling methods include:
1. Better Assessment Science Integrating Source and Non-point Sources (BASINS),
  2. Fundamental statistics, including regression analysis,
  3. Hydrologic Simulation Program-Fortran (HSPF),

**Historical Note**

New Section made by final rulemaking at 8 A.A.R. 3380, effective July 12, 2002 (Supp. 02-3).

**R18-11-604. Types of Surface Waters Placed on the Planning List and 303(d) List**

- A.** The Department shall evaluate, at least every five years, Arizona's surface waters by considering all readily available data.
1. The Department shall place a surface water or segment on:
    - a. The Planning List if it meets any of the criteria described in subsection (D), or

  2. The Department shall remove a surface water or segment from the Planning List based on the requirements in R18-11-605(E)(1) or from the 303(d) List, based on the requirements in R18-11-605(E)(2).
  3. The Department may move surface waters or segments between the Planning List and the 303(d) List based on the criteria established in R18-11-604 and R18-11-605.
- B.** When placing a surface water or segment on the Planning List or the 303(d) List, the Department shall list the stream reach, derived from EPA's Reach File System or National Hydrography Dataset, or the entire lake, unless the data indicate that only a segment of the stream reach or lake is impaired or not attaining its designated use, in which case, the Department shall describe only that segment for listing.
- C.** Exceptions. The Department shall not place a surface water or segment on either the Planning List or the 303(d) List if the non-attainment of a surface water quality standard is due to one of the following:
1. Pollutant loadings from naturally occurring conditions alone are sufficient to cause a violation of applicable water quality standards;
  2. The data were collected within a mixing zone or under a variance or nutrient waiver established in a NPDES or AZPDES permit for the specific parameter and the result does not exceed the alternate discharge limitation established in the permit. The Department may use data collected within these areas for modeling or allocating loads in a TMDL decision; or

3. An activity exempted under R18-11-117, R18-11-118, or a condition exempted under R18-11-119.

2. The Department shall place a surface water or segment on the Planning List based the criteria in R18-11-605(C). The Department may also include a surface water or segment on the Planning List when:
  - a. A TMDL is completed for the pollutant and approved by EPA;
  - b. The surface water or segment is on the 1998 303(d) List but the dataset used for the listing:
    - i. Does not meet the credible data requirements of R18-11-602, or
    - ii. Contains insufficient samples to meet the data requirements under R18-11-605(D);
  - c. Some monitoring data exist but there are insufficient data to determine whether the surface water or segment is impaired or not attaining, including:
    - i. A numeric surface water quality standard is exceeded, but there are not enough samples or sampling events to fulfill the requirements of R18-11-605(D);
    - ii. Evidence exists of a narrative standard violation, but the amount of evidence is insufficient, based on narrative implementation procedures and the requirements of R18-11-605(D)(3);
    - iii. Existing monitoring data do not meet credible data requirements in R18-11-602; or
    - iv. A numeric surface water quality standard is exceeded, but there are not enough sample results above the laboratory detection limit to support statistical analysis as established in R18-11-603(A)(1).
  - d. The surface water or segment no longer meets the criteria for impairment based on a change in the applicable surface water quality standard or a designated use approved by EPA under section 303(c)(1) of the Clean Water Act, but insufficient current or original monitoring data exist to determine whether the surface water or segment will meet current surface water quality standards;
  - e. Trend analysis using credible and scientifically defensible data indicate that surface water quality standards may be exceeded by the next assessment cycle;
  - f. The exceedance of surface water quality standards is due to pollution, but not a pollutant;
  - g. Existing data were analyzed using methods with laboratory detection limits above the numeric surface water quality standard but analytical methods with lower laboratory detection limits are available;
  - h. The surface water or segment is expected to attain its designated use by the next assessment as a result of existing or proposed technology-based effluent limitations or other pollution control requirements

under local, state, or federal authority. The appropriate entity shall provide the Department with the following documentation to support placement on the Planning List:

- i. Verification that discharge controls are required and enforceable;
- ii. Controls are specific to the surface water or segment, and pollutant of concern;
- iii. Controls are in place or scheduled for implementation; and
- iv. There are assurances that the controls are sufficient to bring about attainment of water quality standards by the next 303(d) List submission; or

**E. 303(d) List. The Department shall:**

1. Place a surface water or segment on the 303(d) List if the Department determines:
  - a. Based on R18-11-605(D), that the surface water or segment is impaired due to a pollutant and that a TMDL decision is necessary; or
  - b. That the surface water or segment is threatened due to a pollutant and, at the time the Department submits a final 303(d) List to EPA, there are federal regulations implementing section 303(d) of the Clean Water Act that require threatened waters be included on the list.
2. Provide public notice of the 303(d) List according to the requirements of A.R.S. § 49-232 and submit the 303(d) List according to section 303(d) of the Clean Water Act.

**Historical Note**

New Section made by final rulemaking at 8 A.A.R. 3380, effective July 12, 2002 (Supp. 02-3).

**R18-11-605. Evaluating A Surface Water or Segment For Listing and Delisting**

- A.** The Department shall compile and evaluate all reasonably current, credible, and scientifically defensible data to determine whether a surface water or segment is impaired or not attaining.
- B.** Weight-of-evidence approach.
  1. The Department shall consider the following concepts when evaluating data:
    - a. Data or information collected during critical conditions may be considered separately from the complete dataset, when the data show that the surface water or segment is impaired or not attaining its designated use during those critical conditions, but attaining its uses during other periods. Critical conditions may include stream flow, seasonal periods, weather conditions, or anthropogenic activities;
    - b. Whether the data indicate that the impairment is due to persistent, seasonal, or recurring conditions. If the data do not represent persistent, recurring, or seasonal conditions, the Department may place the surface water or segment on the Planning List;
    - c. Higher quality data over lower quality data when making a listing decision. Data quality is established by the reliability, precision, accuracy, and represen-

CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

tativeness of the data, based on factors identified in R18-11-602(A) and (B), including monitoring methods, analytical methods, quality control procedures, and the documented field and laboratory quality control information submitted with the data. The Department shall consider the following factors when determining higher quality data:

- i. The age of the measurements. Newer measurements are weighted heavier than older measurements, unless the older measurements are more representative of critical flow conditions;
  - ii. Whether the data provide a direct measure of an impact on a designated use. Direct measurements are weighted heavier than measurements of an indicator or surrogate parameter; or
  - iii. The amount or frequency of the measurements. More frequent data collection are weighted heavier than nominal datasets.
2. The Department shall evaluate the following factors to determine if the water quality evidence supports a finding that the surface water or segment is impaired or not attaining:
- a. An exceedance of a numeric surface water quality standard based on the criteria in subsections (C)(1), (C)(2), (D)(1), and (D)(2);
  - b. An exceedance of a narrative surface water quality standard based on the criteria in subsections (C)(3) and (D)(3);
  - c. Additional information that determines whether a water quality standard is exceeded due to a pollutant, suspected pollutant, or naturally occurring condition:
    - i. Soil type, geology, hydrology, flow regime, biological community, geomorphology, climate, natural process, and anthropogenic influence in the watershed;
    - ii. The characteristics of the pollutant, such as its solubility in water, bioaccumulation potential, sediment sorption potential, or degradation characteristics, to assist in determining which data more accurately indicate the pollutant's presence and potential for causing impairment; and
    - iii. Available evidence of direct or toxic impacts on aquatic life, wildlife, or human health, such as fish kills and beach closures, where there is sufficient evidence that these impacts occurred due to water quality conditions in the surface water.
  - d. Other available water quality information, such as NPDES or AZPDES water quality discharge data, as applicable.
  - e. If the Department determines that a surface water or segment does not merit listing under numeric water

quality standards based on criteria in subsections (C)(1), (C)(2), (D)(1), or (D)(2) for a pollutant, but there is evidence of a narrative standard exceedance in that surface water or segment under subsection (D)(3) as a result of the presence of the same pollutant, the Department shall list the surface water or segment as impaired only when the evidence indicates that the numeric water quality standard is insufficient to protect the designated use of the surface water or segment and the Department justifies the listing based on any of the following:

- i. The narrative standard data provide a more direct indication of impairment as supported by professionally prepared and peer-reviewed publications;
  - ii. Sufficient evidence of impairment exists due to synergistic effects of pollutant combinations or site-specific environmental factors; or
  - iii. The pollutant is bioaccumulative, relatively insoluble in water, or has other characteristics that indicate it is occurring in the specific surface water or segment at levels below the laboratory detection limits, but at levels sufficient to result in an impairment.
3. The Department may consider a single line of water quality evidence when the evidence is sufficient to demonstrate that the surface water or segment is impaired or not attaining.

C. Planning List.

1. When evaluating a surface water or segment for placement on the Planning List.
  - a. Consider at least ten spatially or temporally independent samples collected over three or more temporally independent sampling events; and
  - b. Determine numeric water quality standards exceedances. The Department shall:
    - i. Place a surface water or segment on the Planning List following subsection (B), if the number of exceedances of a surface water quality standard is greater than or equal to the number listed in Table 1, which provides the number of exceedances that indicate a minimum of a 10 percent exceedance frequency with a minimum of a 80 percent confidence level using a binomial distribution for a given sample size; or
    - ii. For sample datasets exceeding those shown in Table 1, calculate the number of exceedances using the following equation:  $(X \geq x | n, p)$  where  $n$  = number of samples;  $p$  = exceedance probability of 0.1;  $x$  = smallest number of exceedances required for listing with “ $n$ ” samples; and confidence level  $\geq 80$  percent.

2. When there are less than ten samples, the Department shall place a surface water or segment on the Planning List following subsection (B), if three or more temporally independent samples exceed the following surface water quality standards:
  - a. The surface water quality standard for a pollutant listed in 18 A.A.C. 11, Article 1, Appendix A, Table 1, except for nitrate or nitrate/nitrite;
  - b. The surface water quality standard for temperature or the single sample maximum water quality standard for suspended sediment concentration, nitrogen, and phosphorus in R18-11-109;

3. The Department shall place a surface water or segment on the Planning List if information in subsections (B)(2)(c), (B)(2)(d), and (B)(2)(e) indicates that a narrative water

quality standard violation exists, but no narrative implementation procedure required under A.R.S. § 49-232(F) exists to support use of the information for listing.

**D. 303(d) List.**

1. When evaluating a surface water or segment for placement on the 303(d) List.
  - a. Consider at least 20 spatially or temporally independent samples collected over three or more temporally independent sampling events; and
  - b. Determine numeric water quality standards exceedances. The Department shall:
    - i. Place a surface water or segment on the 303(d) List, following subsection (B), if the number of exceedances of a surface water quality standard is greater than or equal to the number listed in Table 2, which provides the number of exceedances that indicate a minimum of a 10 percent exceedance frequency with a minimum of a 90 percent confidence level using a binomial distribution, for a given sample size; or
    - ii. For sample datasets exceeding those shown in Table 2, calculate the number of exceedances using the following equation:  $(X \geq x | n, p)$  where  $n$  = number of samples;  $p$  = exceedance probability of 0.1;  $x$  = smallest number of exceedances required for listing with “ $n$ ” samples; and confidence level  $\geq 90$  percent.

2. The Department shall place a surface water or segment on the 303(d) List, following subsection (B) without the required number of samples or numeric water quality standard exceedances under subsection (D)(1), if either the following conditions occur:
    - a. More than one temporally independent sample in any consecutive three-year period exceeds the surface water quality standard in:
      - i. The acute water quality standard for a pollutant listed in 18 A.A.C. 11, Article 1, Appendix A, Table 2 and the acute water quality standards in R18-11-112;
      - ii. The surface water quality standard for nitrate or nitrate/nitrite in 18 A.A.C. 11, Article 1, Appendix A, Table 1; or
      - iii. The single sample maximum water quality standard for bacteria in subsections R18-11-109(A).
    - b. More than one exceedance of an annual mean, 90th percentile, aquatic and wildlife chronic water quality standard, or a bacteria 30-day geometric mean water quality standard occurs, as specified in R18-11-109, R18-11-110, R18-11-112, or 18 A.A.C. 11, Article 1, Appendix A, Table 2.
  3. Narrative water quality standards exceedances. The Department shall place a surface water or segment on the Planning List if the listing requirements are met under A.R.S. § 49-232(F).
- E. Removing a surface water, segment, or pollutant from the Planning List or the 303(d) List.**
1. Planning List. The Department shall remove a surface water, segment, or pollutant from the Planning List when:
    - a. Monitoring activities indicate that:
      - i. There is sufficient credible data to determine that the surface water or segment is impaired under subsection (D), in which case the Department shall place the surface water or segment on the 303(d) List. This includes surface waters with an EPA approved TMDL when the Department determines that the TMDL strategy is insufficient for the surface water or segment to attain water quality standards; or
      - ii. There is sufficient credible data to determine that the surface water or segment is attaining all designated uses and standards.
    - b. All pollutants for the surface water or segment are delisted.
  2. 303(d) List. The Department shall:
    - a. Remove a pollutant from a surface water or segment from the 303(d) List based on one or more of the following criteria:
      - i. The Department developed, and EPA approved, a TMDL for the pollutant;
      - ii. The data used for previously listing the surface water or segment under R18-11-605(D) is superseded by more recent credible and scientifically defensible data meeting the requirements of R18-11-602, showing that the surface water or segment meets the applicable numeric or narrative surface water quality standard. When evaluating data to remove a pollutant from the 303(d) List, the monitoring entity shall collect the more recent data under similar hydrologic or climatic conditions as occurred when the samples were taken that indicated impairment, if those conditions still exist;
      - iii. The surface water or segment no longer meets the criteria for impairment based on a change in the applicable surface water quality standard or a designated use approved by EPA under section 303(c)(1) of the Clean Water Act;
      - iv. The surface water or segment no longer meets the criteria for impairment for the specific narrative water quality standard based on a change in narrative water quality standard implementation procedures;
      - v. A re-evaluation of the data indicate that the surface water or segment does not meet the criteria for impairment because of a deficiency in the original analysis; or
      - vi. Pollutant loadings from naturally occurring conditions alone are sufficient to cause a violation of applicable water quality standards;
    - b. Remove a surface water, segment, or pollutant from the 303(d) List, based on criteria that are no more stringent than the listing criteria under subsection (D);
    - c. Remove a surface water or segment from the 303(d) List if all pollutants for the surface water or segment are removed from the list;
    - d. Remove a surface water, segment, or pollutant, from the 303(d) List and place it on the Planning List, if:
      - i. The surface water, segment or pollutant was on the 1998 303(d) List and the dataset used in the original listing does not meet the credible data requirements under R18-11-602, or contains insufficient samples to meet the data requirements under subsection (D); or

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

- ii. The monitoring data indicate that the impairment is due to pollution, but not a pollutant.

**Historical Note**

New Section made by final rulemaking at 8 A.A.R. 3380, effective July 12, 2002 (Supp. 02-3).

**R18-11-606. TMDL Priority Criteria for 303(d) Listed Surface Waters or Segments**

- A. In addition to the factors specified in A.R.S. § 49-233(C), the Department shall consider the following when prioritizing an impaired water for development of TMDLs:
  - 1. A change in a water quality standard;
  - 2. The date the surface water or segment was added to the 303(d) List;
  - 3. The presence in a surface water or segment of species listed as threatened or endangered under section 4 of the Endangered Species Act;
  - 4. The complexity of the TMDL;
  - 5. State, federal, and tribal policies and priorities; and
  - 6. The efficiencies of coordinating TMDL development with the Department's surface water monitoring program, the watershed monitoring rotation, or with remedial programs.
- B. The Department shall prioritize an impaired surface water or segment for TMDL development based on the factors specified in A.R.S. § 49-233(C) and subsection (A) as follows:
  - 1. Consider an impaired surface water or segment a high priority if:
    - a. The listed pollutant poses a substantial threat to the health and safety of humans, aquatic life, or wildlife based on:
      - i. The number and type of designated uses impaired;
      - ii. The type and extent of risk from the impairment to human health, aquatic life, or wildlife;
      - iii. The pollutant causing the impairment, or
      - iv. The severity, magnitude, and duration the surface water quality standard was exceeded;
    - b. A new or modified individual NPDES or AZPDES permit is sought for a new or modified discharge to the impaired water;
    - c. The listed surface water or segment is listed as a unique water in A.A.C. R18-11-112 or is part of an area classified as a "wilderness area," "wild and scenic river," or other federal or state special protection of the water resource;
    - d. The listed surface water or segment contains a species listed as threatened or endangered under the federal Endangered Species Act and the presence of the pollutant in the surface water or segment is likely to jeopardize the listed species;
    - e. A delay in conducting the TMDL could jeopardize the Department's ability to gather sufficient credible data necessary to develop the TMDL;
    - f. There is significant public interest and support for the development of a TMDL;
    - g. The surface water or segment has important recreational and economic significance to the public; or
    - h. The pollutant is listed for eight years or more.
  - 2. Consider an impaired surface water or segment a medium priority if:
    - a. The surface water or segment fails to meet more than one designated use;
    - b. The pollutant exceeds more than one surface water quality standard;
    - c. A surface water quality standard exceedance is correlated to seasonal conditions caused by natural events, such as storms, weather patterns, or lake turnover;
    - d. It will take more than two years for proposed actions in the watershed to result in the surface water attaining applicable water quality standards;
    - e. The type of pollutant and other factors relating to the surface water or segment make the TMDL complex; or
    - f. The administrative needs of the Department, including TMDL schedule commitments with EPA, permitting requirements, or basin priorities that require completion of the TMDL.
  - 3. Consider an impaired surface water or segment a low priority if:
    - a. The Department has formally submitted a proposal to delist the surface water, segment, or pollutant to EPA based on R18-11-605(E)(2). If the Department makes the submission outside the listing process cycle, the change in priority ranking will not be effective until EPA approves the submittal;
    - b. The Department has modified, or formally proposed for modification, the designated use or applicable surface water quality standard, resulting in an impaired water no longer being impaired, but the modification has not been approved by EPA;
    - c. The surface water or segment is expected to attain surface water quality standards due to any of the following:
      - i. Recently instituted treatment levels or best management practices in the drainage area,
      - ii. Discharges or activities related to the impairment have ceased, or
      - iii. Actions have been taken and controls are in place or scheduled for implementation that will likely to bring the surface water back into compliance;
    - d. The surface water or segment is ephemeral or intermittent. The Department shall re-prioritize the surface water or segment if the presence of the pollutant in the listed water poses a threat to the health and safety of humans, aquatic life, or wildlife using the water, or the pollutant is contributing to the impairment of a downstream perennial surface water or segment;
    - e. The pollutant poses a low ecological and human health risk;
    - f. Insufficient data exist to determine the source of the pollutant load;
    - g. The uncertainty of timely coordination with national and international entities concerning international waters;
    - h. Naturally occurring conditions are a major contributor to the impairment; and
    - i. No documentation or effective analytical tools exist to develop a TMDL for the surface water or segment with reasonable accuracy.
- C. The Department will target surface waters with high priority factors in subsections (B)(1)(a) through (B)(1)(d) for initiation of TMDLs within two years following EPA approval of the 303(d) List.

## TITLE 18. ENVIRONMENTAL QUALITY

## CHAPTER 11. DEPARTMENT OF ENVIRONMENTAL QUALITY - WATER QUALITY STANDARDS

- D.** The Department may shift priority ranking of a surface water or segment for any of the following reasons:
1. A change in federal, state, or tribal policies or priorities that affect resources to complete a TMDL;
  2. Resource efficiencies for coordinating TMDL development with other monitoring activities, including the Department's ambient monitoring program that monitors watersheds on a five-year rotational basis;
  3. Resource efficiencies for coordinating TMDL development with Department remedial or compliance programs;
  4. New information is obtained that will revise whether the surface water or segment is a high priority based on factors in subsection (B); and
  5. Reduction or increase in staff or budget involved in the TMDL development.
- E.** The Department may complete a TMDL initiated before July 12, 2002 for a surface water or segment that was listed as impaired on the 1998 303(d) List but does not qualify for listing under the criteria in R18-11-605, if:
1. The TMDL investigation establishes that the water quality standard is not being met and the allocation of loads is expected to bring the surface water into compliance with standards,
  2. The Department estimates that more than 50 percent of the cost of completing the TMDL has been spent,
  3. There is community involvement and interest in completing the TMDL, or
  4. The TMDL is included within an EPA-approved state workplan initiated before July 12, 2002.

## PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), Administrative Rules Division, accepts state agency rule notice and other legal filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the *Administrative Code*. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director  
ADMINISTRATIVE RULES DIVISION

### RULES

The definition for a rule is provided for under A.R.S. § 41-1001. “‘Rule’ means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency.”

### THE ADMINISTRATIVE CODE

The *Arizona Administrative Code* is where the official rules of the state of Arizona are published. The *Code* is the official codification of rules that govern state agencies, boards, and commissions.

The *Code* is separated by subject into Titles. Titles are divided into Chapters. A Chapter includes state agency rules. Rules in Chapters are divided into Articles, then Sections. The “R” stands for “rule” with a sequential numbering and lettering outline separated into subsections.

Rules are codified quarterly in the *Code*. Supplement release dates are printed on the footers of each Chapter.

First Quarter: January 1 - March 31  
Second Quarter: April 1 - June 30  
Third Quarter: July 1 - September 30  
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2022 is cited as Supp. 22-1. Supplements are traditionally released three to four weeks after the end of the quarter because filings are accepted until the last day of the quarter.

Please note: The Office publishes by Chapter, not by individual rule Section. Therefore there might be only a few Sections codified in each Chapter released in a supplement. This is why the Office lists only updated codified Sections on the previous page.

### RULE HISTORY

Refer to the HISTORICAL NOTE at the end of each Section for the effective date of a rule. The note also includes the *Register* volume and page number in which the notice was published (A.A.R.) and beginning in supplement 21-4, the date the notice was published in the *Register*.

### AUTHENTICATION OF PDF CODE CHAPTERS

The Office began to authenticate Chapters of the *Code* in Supp. 18-1 to comply with A.R.S. §§ 41-1012(B) and A.R.S. § 41-5505.

A certification verifies the authenticity of each *Code* Chapter posted as it is released by the Office of the Secretary of State. The authenticated pdf of the *Code* includes an integrity mark with a certificate ID. Users should check the validity of the signature, especially if the pdf has been downloaded. If the digital signature is invalid it means the document’s content has been compromised.

### HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the *Arizona Administrative Register* for recent updates to rule Sections.

### ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature’s website, [www.azleg.gov](http://www.azleg.gov). An agency’s authority note to make rules is often included at the beginning of a Chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

### SESSION LAW REFERENCES

Arizona Session Law references in a Chapter can be found at the Secretary of State’s website, [www.azsos.gov](http://www.azsos.gov) under Services-> Legislative Filings.

### EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt from the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, Chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency’s exemption is written in law by the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the *Register* online at [www.azsos.gov/rules](http://www.azsos.gov/rules), click on the *Administrative Register* link.

Editor’s notes at the beginning of a Chapter provide information about rulemaking Sections made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

## PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), Administrative Rules Division, accepts state agency rule notice and other legal filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the *Administrative Code*. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director  
ADMINISTRATIVE RULES DIVISION

### RULES

The definition for a rule is provided for under A.R.S. § 41-1001. “‘Rule’ means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency.”

### THE ADMINISTRATIVE CODE

The *Arizona Administrative Code* is where the official rules of the state of Arizona are published. The *Code* is the official codification of rules that govern state agencies, boards, and commissions.

The *Code* is separated by subject into Titles. Titles are divided into Chapters. A Chapter includes state agency rules. Rules in Chapters are divided into Articles, then Sections. The “R” stands for “rule” with a sequential numbering and lettering outline separated into subsections.

Rules are codified quarterly in the *Code*. Supplement release dates are printed on the footers of each Chapter.

First Quarter: January 1 - March 31  
Second Quarter: April 1 - June 30  
Third Quarter: July 1 - September 30  
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2022 is cited as Supp. 22-1. Supplements are traditionally released three to four weeks after the end of the quarter because filings are accepted until the last day of the quarter.

Please note: The Office publishes by Chapter, not by individual rule Section. Therefore there might be only a few Sections codified in each Chapter released in a supplement. This is why the Office lists only updated codified Sections on the previous page.

### RULE HISTORY

Refer to the HISTORICAL NOTE at the end of each Section for the effective date of a rule. The note also includes the *Register* volume and page number in which the notice was published (A.A.R.) and beginning in supplement 21-4, the date the notice was published in the *Register*.

### AUTHENTICATION OF PDF CODE CHAPTERS

The Office began to authenticate Chapters of the *Code* in Supp. 18-1 to comply with A.R.S. §§ 41-1012(B) and A.R.S. § 41-5505.

A certification verifies the authenticity of each *Code* Chapter posted as it is released by the Office of the Secretary of State. The authenticated pdf of the *Code* includes an integrity mark with a certificate ID. Users should check the validity of the signature, especially if the pdf has been downloaded. If the digital signature is invalid it means the document’s content has been compromised.

### HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the *Arizona Administrative Register* for recent updates to rule Sections.

### ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature’s website, [www.azleg.gov](http://www.azleg.gov). An agency’s authority note to make rules is often included at the beginning of a Chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

### SESSION LAW REFERENCES

Arizona Session Law references in a Chapter can be found at the Secretary of State’s website, [www.azsos.gov](http://www.azsos.gov) under Services-> Legislative Filings.

### EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt from the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, Chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency’s exemption is written in law by the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the *Register* online at [www.azsos.gov/rules](http://www.azsos.gov/rules), click on the *Administrative Register* link.

Editor’s notes at the beginning of a Chapter provide information about rulemaking Sections made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

### PERSONAL USE/COMMERCIAL USE

This Chapter is posted as a public courtesy online, and is for private use only. Those who wish to use the contents for resale or profit should contact the Office about Commercial Use fees. For information on commercial use fees review A.R.S. § 39-121.03 and 1 A.A.C. 1, R1-1-113.

5. "Business of a savings and loan association or savings bank" means receiving money on deposit subject to payment by check or any other form of order or request or on presentation of a certificate of deposit or other evidence of debt.
6. "Compensation" means, in applying that term's definition in A.R.S. §§ 6-901, 6-941, and 6-971, anything received in advance, after repayment, or at any time during a loan's life. This subsection expressly excludes the following items from those definitions of compensation:
  - a. Charges or fees customarily received after a loan's closing including prepayment penalties, termination fees, reinvestment fees, late fees, default interest, transfer fees, impound account interest and fees, extension fees, and modification fees. However, extension fees and modification fees are compensation if the lender advances additional funds or increases the credit limit on an open-end mortgage as part of the extension or modification;
  - b. Out-of-pocket expenses paid to independent third parties including appraisal fees, credit report fees, legal fees, document preparation fees, title insurance premiums, recording, filing, and statutory fees, collection fees, servicing fees, escrow fees, and trustee's fees;
  - c. Insurance commissions;
  - d. Contingent or additional interest, including interest based on net operating income; or

10. "Cushion," as that term is used in R20-4-1811 or R20-4-1908, means funds that a servicer or lender may require a borrower to pay into an escrow or impound account before the borrower's periodic payments are available in the account to cover unanticipated disbursements.
11. "Directly or indirectly makes, negotiates, or offers to make or negotiate" and "Directly or indirectly making, negotiating, or offering to make or negotiate," as those phrases are used in A.R.S. §§ 6-901, 6-941, or 6-971, mean:

verified claim to be a contested case, governed by the provisions of 20 A.A.C. 4, Article 12.

- E.** The Superintendent shall, after a hearing, deny a verified claim if the hearing produces evidence of any of the following circumstances:
1. The judgment is not for an injury caused by the depositor and described in subsection (B)(2);
  2. The judgment was awarded by default, stipulation, or consent, and no showing is made in the hearing of an injury caused by the depositor and described in subsection (B)(2);
  3. The judgment's execution has been stayed for any reason;
  4. The judgment was procured through fraud or collusion;
  5. The judgment has been satisfied from other sources; or
  6. The action that produced the judgment was barred by the applicable statute of limitations at the time it was commenced.
- F.** If the Superintendent grants a verified claim, the Superintendent shall do so in the amount of the compensatory damages awarded against the depositor in the judgment, exclusive of:
1. Attorney's fees, and

- G.** A person injured by a depositor shall give the Superintendent written notice at the time of filing a civil action if the claims alleged could be made as a verified claim under this Section. The injured person shall provide further information about the civil action to the Superintendent upon request.

- I.** If given notice under subsection (G), the Superintendent shall determine whether the deposit is sufficient to satisfy all claims under subsection (F). The Superintendent shall determine award amounts for each claim of which the Superintendent has notice, and authorize payment, as follows:
1. If the deposit is sufficient to satisfy all claims under subsection (F), the Superintendent shall authorize its release as described in subsection (H).
  2. If the deposit is not sufficient to satisfy all claims under subsection (F), the Superintendent shall calculate the award on each claim as follows:
    - a. Each granted claim shall receive a pro rata share of the total deposit.
    - b. Each pro rata share shall be a dollar amount calculated by multiplying the total deposit by a fraction.
      - i. The numerator of the fraction is the amount of the Superintendent's award for the verified claim.
      - ii. The denominator of the fraction is the sum of the amount of the Superintendent's award for the verified claim plus the total compensatory damages sought in all other civil actions against the same depositor disclosed to the Superintendent under subsection (G).
    - c. The Superintendent shall authorize the State Treasurer to release the pro rata portion of the deposit calculated for each verified claim.
- J.** A depositor or former licensee may request return of its deposit if it substitutes a bond for the deposit, or if its license is surrendered, revoked, or expired, and if all statutory condi-

tions for release of the deposit have been satisfied. The Superintendent shall not release any part of a deposit to a depositor or former licensee until the Superintendent determines whether there are any awards on verified claims unsatisfied because of an apportionment under subsection (I). The Superintendent shall use the deposit amount to pay any unsatisfied portion of those awards. If the deposit amount is not sufficient to pay in full all unsatisfied awards, the Superintendent shall pay the remaining amount of the deposit to claimants in the ratio their awards bear to the total of all awards granted against the deposit.

- K.** The court supervising a licensee in receivership may order the release of a deposit to persons injured by conduct described in subsection (B). In that event, the receiver shall deliver a certified copy of the court's order to the Superintendent. The copy may be uncertified if the receiver is the Superintendent or any other officer or agency of the state of Arizona. The Superintendent shall then authorize the State Treasurer, in writing, to release the deposit to the receiver. The receiver shall distribute the deposit as ordered by the receivership court, rather than under this Section.

- B.** The time-frames in Table A apply solely to applications received by the Department after the effective date of this Section. Each overall time-frame consists of an administrative completeness review time-frame, and a substantive review time-frame. The administrative completeness review time-frame begins to run upon receipt of an application by the Department.
1. Within the administrative completeness review time-frame in Table A, the Department shall notify the applicant in writing whether the application is complete. If the application is incomplete, the notice shall specify the missing information or component.

## TITLE 20. COMMERCE, FINANCIAL INSTITUTIONS, AND INSURANCE

## CHAPTER 4. DEPARTMENT OF INSURANCE AND FINANCIAL INSTITUTIONS - FINANCIAL INSTITUTIONS

2. An applicant whose application is incomplete shall supply the missing information within 60 days after the date of the notice. If an applicant shows good cause in writing before the expiration of the 60 day time limit, the Superintendent shall extend the period for administrative completeness review time-frame stops running on the postmark date of the Department's written notice of an incomplete application, and resumes when the Department receives a complete application. If the applicant fails to submit a complete application within the specified time limit, the Department shall reject the application and close the file. An applicant may reapply.
  3. The substantive review time-frame begins to run on the postmark date of the Department's written notice that the application is administratively complete.
  4. Within the overall time-frame set forth in Table A the Department shall send the applicant written notice of its decision to approve, conditionally approve, or deny a license, unless the time-frame is extended by mutual agreement under A.R.S. § 41-1075. If the Department denies an application, it shall provide written justification for the denial and a written explanation of the applicant's right to a hearing or appeal in the form required by A.R.S. § 41-1076.
  5. The Department shall calculate time limits prescribed in this Section under R2-19-107.
- C. The time-frames in this Section apply solely to actions taken by the Department. Nothing in this Section relieves a licensee or applicant of a duty to fulfill any other legal or regulatory requirement that is a condition of its power and authority to engage in business.

## PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), Administrative Rules Division, accepts state agency rule notice and other legal filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the *Administrative Code*. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director  
ADMINISTRATIVE RULES DIVISION

### RULES

The definition for a rule is provided for under A.R.S. § 41-1001. “‘Rule’ means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency.”

### THE ADMINISTRATIVE CODE

The *Arizona Administrative Code* is where the official rules of the state of Arizona are published. The *Code* is the official codification of rules that govern state agencies, boards, and commissions.

The *Code* is separated by subject into Titles. Titles are divided into Chapters. A Chapter includes state agency rules. Rules in Chapters are divided into Articles, then Sections. The “R” stands for “rule” with a sequential numbering and lettering outline separated into subsections.

Rules are codified quarterly in the *Code*. Supplement release dates are printed on the footers of each Chapter.

First Quarter: January 1 - March 31  
Second Quarter: April 1 - June 30  
Third Quarter: July 1 - September 30  
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2022 is cited as Supp. 22-1. Supplements are traditionally released three to four weeks after the end of the quarter because filings are accepted until the last day of the quarter.

Please note: The Office publishes by Chapter, not by individual rule Section. Therefore there might be only a few Sections codified in each Chapter released in a supplement. This is why the Office lists only updated codified Sections on the previous page.

### RULE HISTORY

Refer to the HISTORICAL NOTE at the end of each Section for the effective date of a rule. The note also includes the *Register* volume and page number in which the notice was published (A.A.R.) and beginning in supplement 21-4, the date the notice was published in the *Register*.

### AUTHENTICATION OF PDF CODE CHAPTERS

The Office began to authenticate Chapters of the *Code* in Supp. 18-1 to comply with A.R.S. §§ 41-1012(B) and A.R.S. § 41-5505.

A certification verifies the authenticity of each *Code* Chapter posted as it is released by the Office of the Secretary of State. The authenticated pdf of the *Code* includes an integrity mark with a certificate ID. Users should check the validity of the signature, especially if the pdf has been downloaded. If the digital signature is invalid it means the document’s content has been compromised.

### HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the *Arizona Administrative Register* for recent updates to rule Sections.

### ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature’s website, [www.azleg.gov](http://www.azleg.gov). An agency’s authority note to make rules is often included at the beginning of a Chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

### SESSION LAW REFERENCES

Arizona Session Law references in a Chapter can be found at the Secretary of State’s website, [www.azsos.gov](http://www.azsos.gov) under Services-> Legislative Filings.

### EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt from the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, Chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency’s exemption is written in law by the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the *Register* online at [www.azsos.gov/rules](http://www.azsos.gov/rules), click on the *Administrative Register* link.

Editor’s notes at the beginning of a Chapter provide information about rulemaking Sections made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

### PERSONAL USE/COMMERCIAL USE

This Chapter is posted as a public courtesy online, and is for private use only. Those who wish to use the contents for resale or profit should contact the Office about Commercial Use fees. For information on commercial use fees review A.R.S. § 39-121.03 and 1 A.A.C. 1, R1-1-113.

**R20-5-621. Citations: Notices of De Minimis Violations**

- A.** The Division Director shall review the inspection reports of the Compliance Safety and Health Officer. If, on the basis of the report, the Division Director believes that the employer has violated a requirement of A.R.S. § 23-403 of the Act, of any standard, rule or order promulgated pursuant to A.R.S. § 23-410 of the Act, or of any substantive rule published in these rules, he shall, if appropriate, consult with the Industrial Commission's counsel and shall issue to the employer either a citation or notice of de minimis violations. After considering all views presented, the Industrial Commission shall affirm the determination of the Division Director, order a reinspection, or issue a citation if the Industrial Commission believes that the inspection disclosed a violation. The Industrial Commission shall furnish the complaining party and the employer with a written notification of their determination and the reasons therefore. The determination of the Industrial Commission shall be final and not subject to review.
- D.** Every citation shall state that the issuance of a citation does not constitute a finding that a violation of the Act has occurred unless there is a failure to contest as provided for in the Act or, if contested, unless a citation is affirmed by the Hearing Division or the Review Commission.
